2. SAFETY INSTRUCTION

NOTE

BEFORE SERVICING THIS CHASSIS READ THE “X-RAY RADIATION PRECAUTIONS”, “SAFETY PRECAUTIONS” AND “PRODUCT SAFETY NOTICE” BELOW.

X-RAY RADIATION PRECAUTIONS

1. Excessive high voltage can produce potentially hazardous X-RAY RADIATION. To avoid such hazards, the high voltage must not exceed the specified limit. The nominal value of the high voltage of this receiver is 25kV(21") at max beam current. The high voltage must not, under any circumstances, exceed 27kV(21"). Each time a receiver requires servicing, the high voltage should be checked. It is recommended the reading

of the high voltage recorded as a part of the service recorded as a part of the service records. It is important to use an accurate and reliable high voltage meter.

2. The only source of X-RAY RADIATION in this TV receiver is the picture tube. For continuous RADIATION protection, the replacement tube must be exactly the same type tube as specified in the “PART LIST”.

SAFETY PRECAUTIONS

1. Potentials of high voltage are present when this receiver is operating. Operation of the receiver outside the cabinet or with the back cover removed involves a shock hazard from the receiver.
- 1) Servicing should not be attempted by anyone who is not thoroughly familiar with the precautions necessary when working on high voltage equipment.
- 2) Always discharge the picture tube to avoid the shock hazard before removing the anode cap.
- 3) Discharge the high potential of the picture tube before handling the tube. The picture tube is highly evacuated and if broken, glass fragments will be violently expelled.

2. If any FUSE in this TV receiver is blown, replace it with the FUSE specified in the “PART LIST”.
3. When replacing a high wattage resistor (oxide metal film resistor) in circuit board, keep the resistor 10mm away from circuit board.
4. Keep wires away from high voltage or high temperature components.
5. This receiver must operate between AC 100-240 volts, 50/60Hz. NEVER connect to DC supply or any other power or frequency.

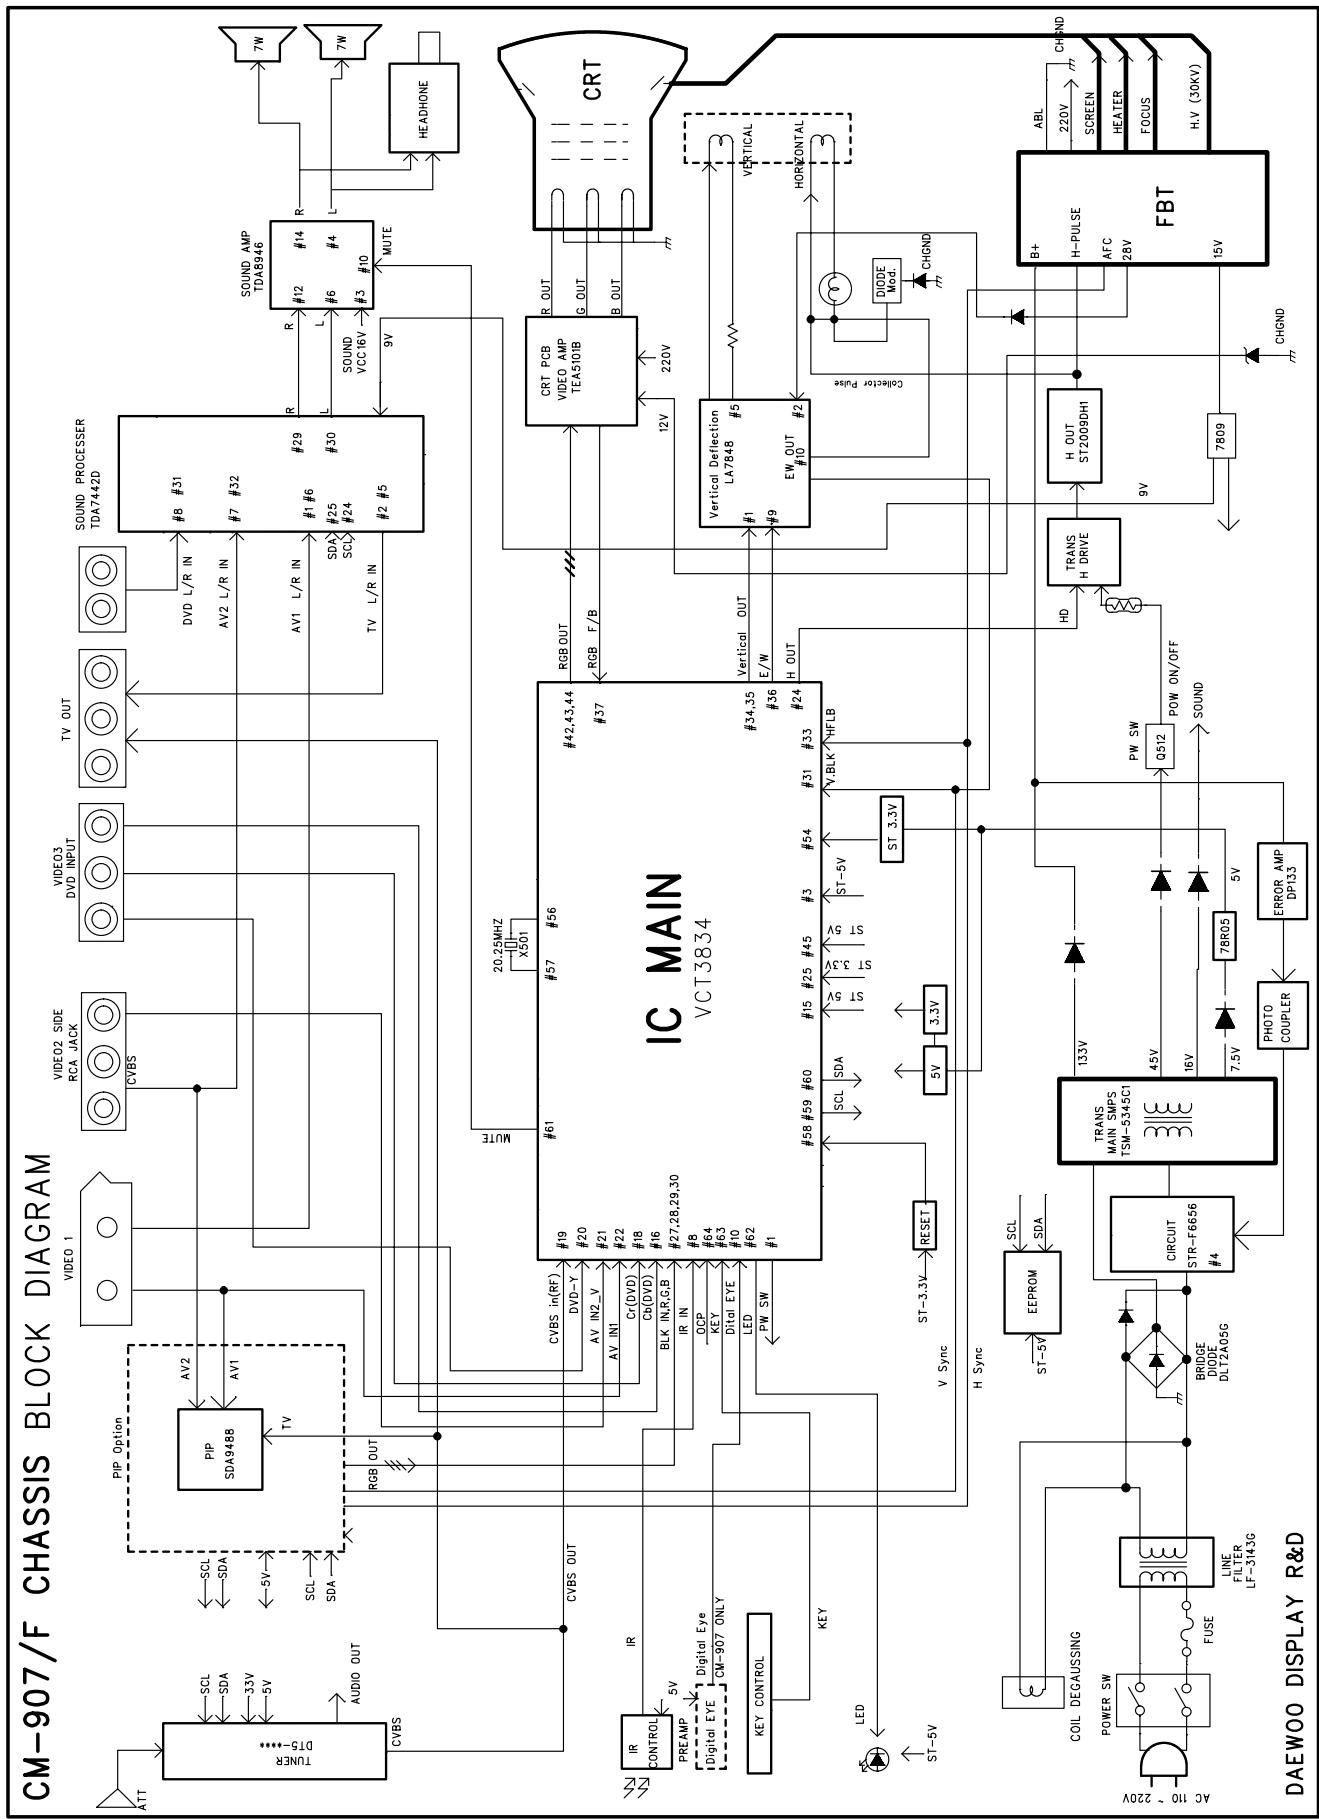

PRODUCT SAFETY

Many electrical and mechanical parts in this chassis have special safety-related characteristics. These characteristics are often passed unnoticed by a visual inspection and the X-RAY RADIATION protection afforded by them cannot necessarily be obtained by using replacement components rated for higher voltage, wattage, etc.

Replacement parts which have these special safety characteristics are identified in this manual and its supple-

ments, electrical components having such features are identified by designated symbol  on the “PART LIST”. Before replacing any of these components, read the “PARTLIST” in this manual carefully. The use of substitute replacement part which do not have the same safety characteristics as specified in the “PART LIST” may created X-RAY RADIATION.

This is the ground reference for the I/O port 1 driver.

Pin 11, VOUT Analog Video Output (Fig. 6-12)

The analog video signal that is selected for the main (luma, CVBS) adc is output at this pin. On VCT 38xxB this pin can also deliver the sum of luma and chroma input signals (S-VHS). An emitter follower is required at this pin.

Pin 12, VRT Reference Voltage Top (Fig. 6-13)

Via this pin, the reference voltage for the A/D converters is decoupled. The pin is connected with 10 F/47 nF to the Signal Ground Pin.

Pin 13, SGND Signal GND for Analog Input

This is the high quality ground reference for the video input signals.

Pin 14, GNDAF* Ground, Analog Front-end

This pin has to be connected to the analog ground. No supply current for the digital stages should flow through this line.

Pin 15, VSUPAF* Supply Voltage, Analog Front-end

Pin 16,18, CBIN,CRIN Analog Chroma Component Input (Fig. 6-11)

These pins are used as the chroma component (CB,CR) inputs required for the analog YUV Interface. The input signal must be AC-coupled. The CRIN pin can alternatively be used as the second SVHS chroma input (CIN2).

Pin 17,18, CIN1,CIN2 Analog Chroma Input (Fig. 6-10)

These are the analog chroma inputs. A S-VHS chroma signal is converted using the chroma (Video 2) AD converter. A resistive divider is used to bias the input signal to the middle of the converter input range. The input signal must be AC-coupled. The CIN2 pin can alternatively be used as the chroma component (CR) input required for the analog YUV Interface.

Pins 1922, VIN1-4 Analog Video Input (Fig. 6-9)

These are the analog video inputs. A CVBS or S-VHS luma signal is converted using the luma (Video 1) AD converter. The input signal must be AC-coupled.

Pin 23, TEST Test Input (Fig. 6-5)

This pin enables factory test modes. For normal operation, it must be connected to ground.

Pin 24, HOUT Horizontal Drive Output (Fig. 6-16)

This open drain output supplies the drive pulse for the horizontal output stage. The polarity and gating with the flyback pulse are selectable by software.

Pin 25, VSUPD* Supply Voltage, Digital Circuitry

Pin 26, GNDD* Ground, Digital Circuitry

This is the ground reference for the digital circuitry.

Pin 27, FBLIN Fast Blank Input (Fig. 6-18)

These pins are used to switch the RGB outputs to the external analog RGB inputs. The active level (low or high) can be selected by software.

Pin 28,29,30, RIN, GIN, BIN Analog RGB Input (Fig. 6-14)

These pins are used to insert an external analog RGB signal, e.g. from a SCART connector which can be switched to the analog RGB outputs with the fast blank signal. The analog back-end provides separate brightness and contrast settings for the external analog RGB signals.

Pin 31, VPROT Vertical Protection Input (Fig. 6-17)

In the event of a malfunction of the vertical deflection stage, the vertical protection circuitry prevents the picture tube from burning in. During vertical blanking, a signal level of 2.5 V is sensed. If a negative edge cannot be detected, the RGB output signals are blanked.

Pin 32, SAFETY Safety Input (Fig. 6-17)

This is a three-level input. Low level means normal function. At the medium level RGB output signals are blanked. At high level RGB output signals are blanked and horizontal drive is shut off.

Pin 33, HFLB Horizontal Flyback Input (Fig. 6-17)

Via this pin the horizontal flyback pulse is supplied to the VCT 38xxA/B.

Pin 34, VERTQ, INTLC Inverted Vertical Sawtooth Output (Fig. 6-20) / Interlace Output (Fig. 6-19)

This pin supplies the inverted signal of VERT. Together with the VERT pin it can be used to drive symmetrical deflection amplifiers. The drive signal is generated with 15-bit precision. The analog voltage is generated by a 4 bit current-DAC with external resistor and uses digital noise shaping. Alternatively this pin supplies the interlace information, the polarity is programmable.

Pin 35, VERT Vertical Sawtooth Output (Fig. 6–20)

This pin supplies the drive signal for the vertical output stage. The drive signal is generated with 15-bit precision. The analog voltage is generated by a 4 bit current-DAC with external resistor and uses digital noise shaping.

Pin 36, EW East-West Parabola Output (Fig. 6–21)

This pin supplies the parabola signal for the East-West correction. The drive signal is generated with 15 bit precision. The analog voltage is generated by a 4 bit current-DAC with external resistor and uses digital noise shaping.

Pin 37, SENSE Measurement ADC Input (Fig. 6–23)

This is the input of the analog to digital converter for the picture and tube measurement. Three measurement ranges are selectable with RSW1 and RSW2.

Pin 38, GNDM Measurement ADC Reference Input

This is the ground reference for the measurement A/D converter. Connect this pin to GND

Pin 39, 40, RSW1, RSW2 Range Switch for Measuring ADC (Fig. 6–22)

Pin 41, SVMOUT Scan Velocity Modulation Output (Fig. 6–15)

This output delivers the analog SVM signal. The D/A converter is a current sink like the RGB D/A converters. At zero signal the output current is 50% of the maximum output current.

Pin 42, 43, 44, ROUT, GOUT, BOUT Analog RGB Output (Fig. 6–15)

These pins are the analog Red/Green/Blue outputs of the back-end. The outputs are current sinks.

Pin 52, 53, AOUT1, AOUT2 Analog Audio Output (Fig. 6–26)

These pins are the analog audio outputs. Connections to these pins must use a 680 ohm series resistor as closely as possible to these pins. The output signals are intended to be AC coupled. Alternatively these pins can be used as digital input port (Fig. 6–26).

Pin 54, VSUPS* Supply Voltage, Standby

Pin 55, GNDS* Ground, Standby
