Wiring Diagram .....	14
Replacement Parts List .....	15

This television receiver will display television closed captioning (CC or □) in accordance with paragraph 15.119 of the FCC rules.

This service manual is intended for qualified service technicians; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual. Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

**WARNING**

Lead in solder used in this product is listed by the California Health and Welfare agency as a known reproductive toxicant which may cause birth defects or other reproductive harm (California Health and Safety Code, Section 25249.5). When servicing or handling circuit boards and other components which contain lead in solder, avoid unprotected skin contact with the solder. Also, when soldering do not inhale any smoke or fumes produced.

### SAFETY NOTICE

#### USE ISOLATION TRANSFORMER WHEN SERVICING

Components having special safety characteristics are identified by  on the schematics and on the parts list in this Service Data and its supplements and bulletins. Before servicing this chassis, it is important that the service technician read and follow the "Safety Precautions" and the "Product Safety Notices" in this Service Manual.

\* For continued x-radiation protection, replace picture tube with original type or Hitachi approved equivalent type.

---

SPECIFICATIONS AND PARTS ARE SUBJECT TO CHANGE FOR IMPROVEMENT

SOLID STATE COLOR TELEVISION

#### SAFETY PRECAUTIONS

**NOTICE:** Comply with all cautions and safety related notes located on or inside the cabinet and on the chassis or picture tube.

**WARNING:** Since the chassis of this receiver is connected to one side of the AC power supply during operation, whenever the receiver is plugged in, service should not be attempted by anyone unfamiliar with the precautions necessary when working on this type of receiver.

The following precautions should be observed:

1. Do not install, remove, or handle the picture tube in any manner unless shatterproof goggles are worn. People not so equipped should be kept away while picture tubes are handled. Keep picture tube away from the body while handling.
2. When service is required, an isolation transformer should be inserted between power line and the receiver before any service is performed on a "HOT" chassis receiver.
3. When replacing a chassis in the receiver, all the protective devices must be put back in place, such as barriers, non-metallic knobs, adjustment and compartment cover-shields, isolation resistors-capacitors, etc.
4. When service is required, observe the original lead dress. Extra care should be taken to assure correct lead dress in the high voltage circuitry area.
5. Always use the manufacturer's replacement components. Especially critical components as indicated on the circuit diagram should not be replaced by a different manufacturer. Furthermore, where a short circuit has occurred, replace those components that indicate evidence of overheating.
6. Before returning a serviced receiver to the customer, the service technician must thoroughly test the unit to be certain that it is completely safe to operate without danger of electrical shock, and be sure that no protective device built into the receiver by the manufacturer has become defective, or inadvertently defeated during servicing.

Therefore, the following checks should be performed for the continued protection of the customer and service technician.

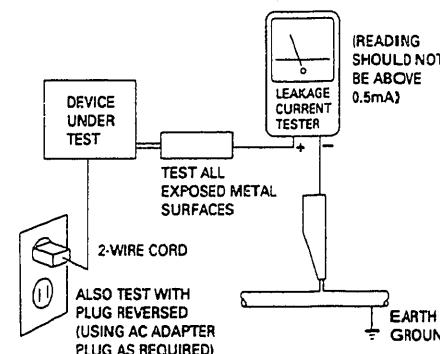

#### Leakage Current Cold Check

With the AC plug removed from the 120V AC 60Hz source, place a jumper across the two plug prongs. Turn the AC power switch on. Using an insulation tester (DC500V), connect one lead to the jumpered AC plug and touch the other lead to each exposed metal part (antennas, screwheads, metal overlays, control shafts, etc.), particularly any exposed metal part having a return path to the chassis. Exposed metal parts having a return path to the chassis should have a minimum resistor reading of  $0.24M\Omega$  and a maximum resistor reading of  $12M\Omega$ . Any resistance value below or above this range indicates an

abnormality which requires corrective action. Exposed metal parts not having a return path to the chassis will indicate an open circuit.

#### Leakage Current Hot Check

Plug the AC line cord directly into an AC 120V 60Hz outlet (do not use an isolation transformer for this check). Turn the AC power switch on. Using a "leakage Current Tester (Simpson Model 229 or equivalent)", measure for current from all exposed metal parts of the cabinet (antennas, screwheads, metal overlays, control shafts, etc.), particularly any exposed metal part having a return path to the chassis, to a known earth ground (water pipe, conduit, etc.). Any current measured must not exceed 0.5mA.

#### AC LEAKAGE TEST

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE RECEIVER TO THE CUSTOMER.

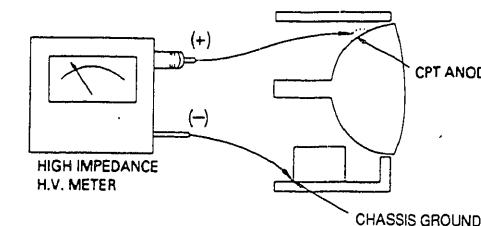

#### High Voltage

This receiver is provided with a hold down circuit for clearly indicating that voltage has increased in excess of a predetermined value. Comply with all notes described in this Service Manual regarding this hold down circuit when servicing, so that this hold down circuit is operated correctly.

#### Serviceman Warning

With minimum Brightness and Contrast, the operating high voltage in this receiver is lower than 31.0kV. In case any component having influence on the high voltage is replaced, confirm that high voltage with minimum Brightness and Contrast is lower than 31.0kV. To measure H.V. use a high impedance H.V. meter. Connect (-) to chassis earth and (+) to the CPT anode button (See the following connection diagram).

**NOTE:** Turn the power switch off without fail before the connection to the Anode button is made.

#### X-Radiation

**TUBE:** The primary source of X radiation in this receiver is the picture tube. The tube utilized in this chassis is specially constructed to limit X radiation emission.

For continued X radiation protection, the replacement tube must be the same type as the original, HITACHI approved type.

When troubleshooting and making test measurements in a receiver with an excessive high voltage problem, avoid coming unnecessarily close to the picture tube and the high voltage component.

Do not operate the chassis longer than is necessary to locate the cause of the excessive voltage.

#### PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in HITACHI television receivers have special safety related characteristics. These are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacements parts which have these special safety characteristics are identified in this Service Manual. Electrical components having such features are identified with an  $\Delta$  mark in the schematics and parts list in this Service Manual.

The use of a substitute replacement component which does not have the same safety characteristics as the HITACHI recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire, X-radiation, or other hazards.

Production Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current HITACHI Service Manual. A subscription to, or additional copies of HITACHI Service Manual may be obtained at a nominal charge from HITACHI HOME ELECTRONICS (AMERICA), INC.

#### CAUTION

The following symbol near the fuse indicates fast operating fuse to be replaced. Fuse ratings appear within the symbol.  
Example:

250V	
2.5A	

F901

The rating of fuse F901 is 2.5A-250V.  
Replace with the same type fuse for continued protection against fire.

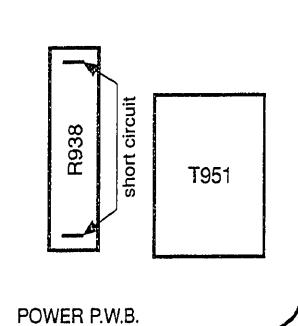

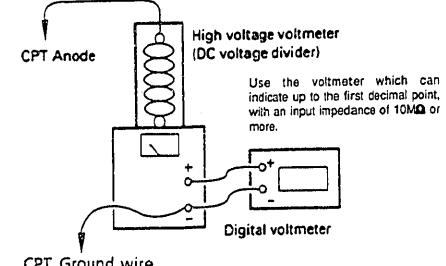

## TECHNICAL SPECIFICATIONS

ANTENNA INPUT IMPEDANCE.....	75Ω (300Ω)	POWER INPUT .....	AC120V, 60Hz
CHANNEL COVERAGE		POWER RATINGS .....	115W
VHF BAND.....	2 - 13	CONVERGENCE .....	Self Convergence
UHF BAND .....	14 - 69	FOCUS .....	Electrostatic
CATV MID BAND .....	A-5 - A-1	PICTURE TUBE.....	A51KQN61X
	A - I	SPEAKER .....	2 Speakers (60 x 120mm)
SUPER BAND .....	J - W	SOUND OUTPUT .....	1W x 2
HYPER BAND .....	W+1 - W+28		
ULTRA BAND .....	W+29 - W+84		
RECEIVING CHANNEL .....	181ch		
CHANNEL INDICATOR .....	DIGITAL/ON SCREEN		
INTERMEDIATE FREQUENCY			
Picture IF Carrier .....	45.75MHz		
Sound IF Carrier .....	41.25 MHz		
Sound IF .....	4.50MHz		

## TECHNICAL CAUTIONS

### High voltage limiter circuit operation check

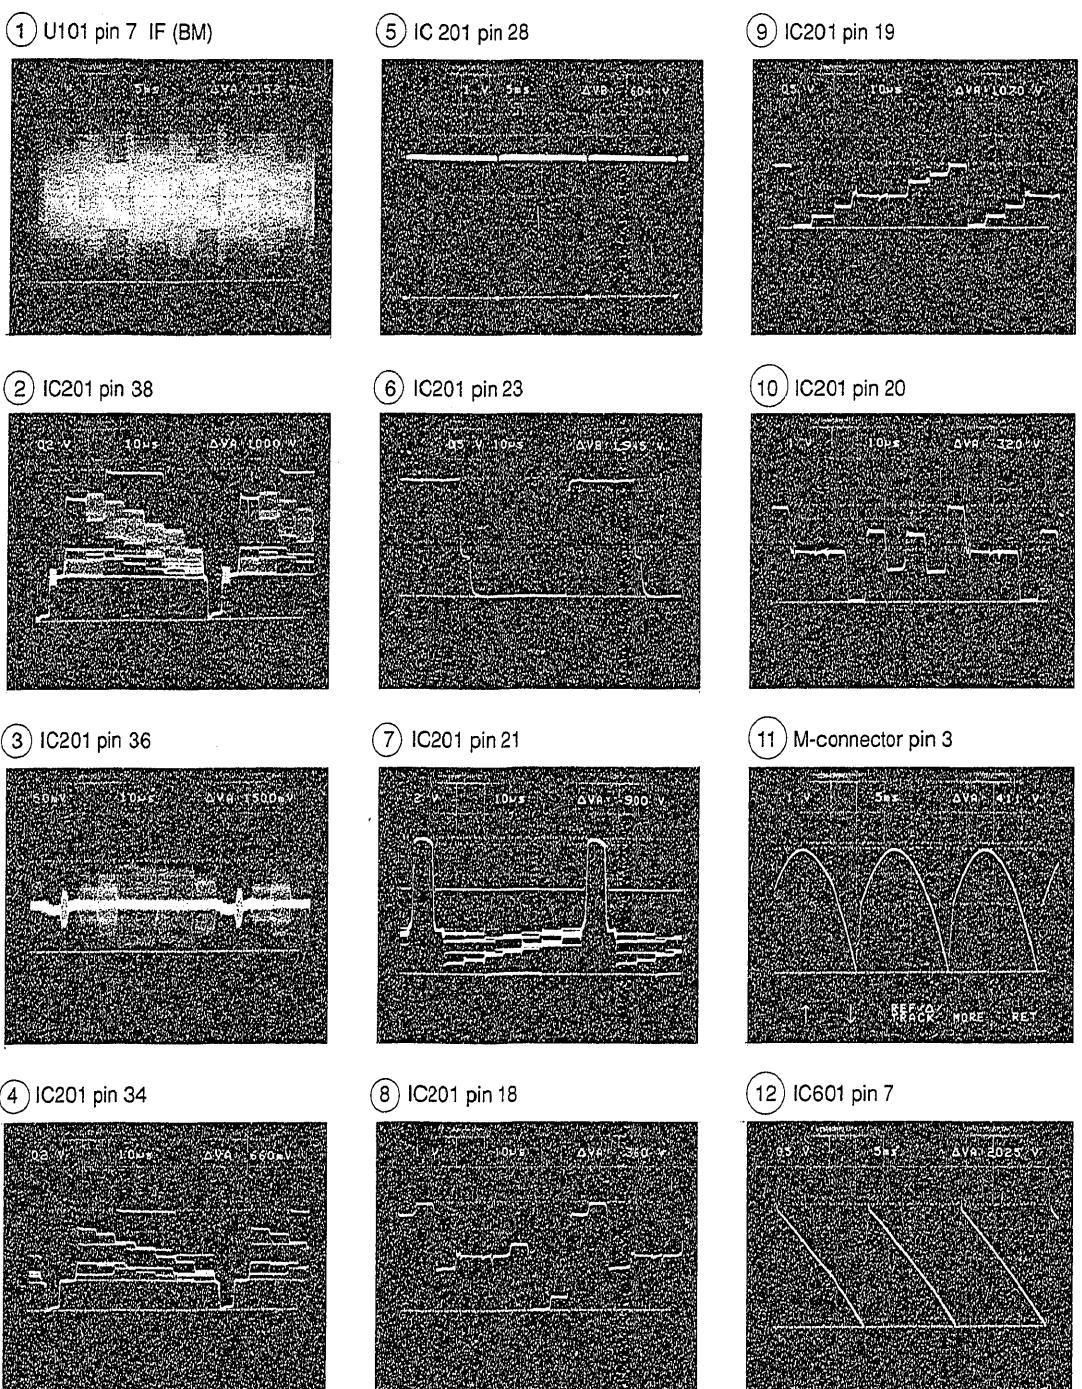

1. Connect the high voltage voltmeter between the CPT anode terminal (anode cap) and ground as shown in the diagram.
2. Set the AC input voltage to  $120 \pm 3V$ .
3. Receive the broadcast signal and set the contrast level and the brightness level to maximum. Adjust the screen VR and sub brightness VR so that beam current is  $1.25 \pm 0.1mA$ .
4. Check that the constant high voltage is  $26.5 \pm 1.5kV$  at this time.
5. Set the AC input voltage to  $100 \pm 5V$  and then short circuit both ends of R938.
6. Leave the setting of the contrast, brightness and screen VRs as in item (3) and gradually increase the AC input voltage. Check that the picture disappears when the high voltage is less than  $31.0kV$ .
7. Turn the switch of the set off immediately after checking that the picture disappears.
