SAFETY NOTICE

USE ISOLATION TRANSFORMER WHEN SERVICING

Components having special safety characteristics are identified by a  on the parts list in this Service Data and its supplements and bulletins. Before servicing the chassis, it is important that the service technician read and follow the “Safety Precautions” and “Product Safety Notices” in this Service Manual.

SPECIFICATIONS AND PARTS ARE SUBJECT TO CHANGE FOR IMPROVEMENT

AUGUST 2001

HHEA-MANUFACTURING DIVISION

SAFETY PRECAUTIONS

NOTICE: Comply with all cautions and safety-related notes located on or inside the cabinet and on the chassis or picture tube.

WARNING: Since the chassis of this receiver is connected to one side of the AC power supply during operation, whenever the receiver is plugged in, service should not be attempted by any one unfamiliar with the precautions necessary when working on this type of receiver.

The following precautions should be observed:

1. Do not install, remove, or handle the picture tube in any manner unless shatterproof goggles are worn. People not so equipped should be kept away from the picture tube while handling.
2. When service is required, an isolation transformer should be inserted between power line and the receiver before any service is performed on a "HOT" chassis receiver.
3. When replacing a chassis in the receiver, all the protective devices must be put back in place, such as barriers, nonmetallic knobs, adjustment and compartment cover-shields, isolation resistors, capacitors, etc.
4. When service is required, observe the original lead dress in the high voltage circuitry area.
5. Always use the manufacturer's replacement components. Critical components as indicated on the circuit diagram should not be replaced by another manufacturer's. Furthermore, where a short circuit has occurred, replace those components that indicate evidence of overheating.
6. Before returning a serviced receiver to the customer, the service technician must thoroughly test the unit to be certain that it is completely safe to operate without danger of electrical shock, and be sure that no protective device built into the receiver by the manufacturer has become defective, or inadvertently defeated during servicing.

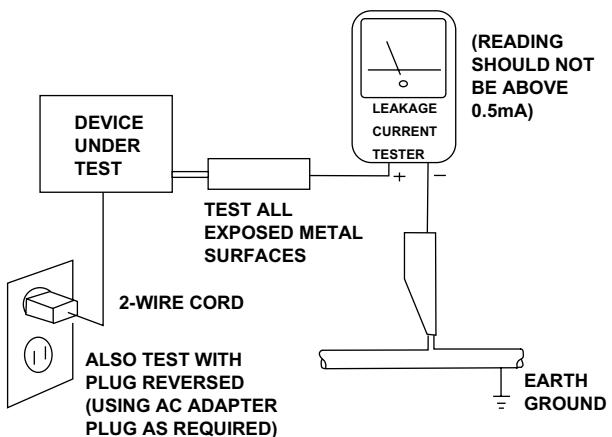

Therefore, the following checks should be performed for the continued protection of the customer and service technician.

Leakage Current Cold Check

With the AC plug removed from the 120V AC 60Hz source, place a jumper across the two plug prongs. Using an insulation tester (DC500V), connect one lead to the jumpered AC plug and touch the other lead to each exposed metal part (antennas, screwheads, metal overlays, control shafts, etc.), particularly any exposed metal part having a return path to the chassis should have a minimum resistor reading of $0.24\text{M}\Omega$ and a maximum resistor reading of $12\text{M}\Omega$. Any resistance value below or above this range indicates an abnormality which requires corrective action. An exposed metal part having a return path to the chassis will indicate an open circuit.

Leakage Current Hot Check

Plug the AC line cord directly into a 120V AC 60Hz outlet (do not use an isolated transformer for this check). Turn the AC power ON. Using a Leakage Current Tester (Simpson's Model 229 or equivalent), measure for current from all exposed metal parts of the cabinet (antennas, screwheads, overlays, control shafts, etc.) particularly any exposed metal part having a return path to the chassis or to a known earth ground (water pipe, conduit, etc.). Any current measured must not exceed 0.5 millamps.

AC LEAKAGE TEST

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE RECEIVER TO THE CUSTOMER.

High Voltage

This receiver is provided with a hold down circuit for clearly indicating that voltage has increased in excess of a predetermined value. Comply with all notes described in this service manual regarding this hold down circuit when servicing, so that this hold down circuit is operated correctly.

Serviceman Warning

With minimum BRIGHTNESS and CONTRAST, the operating high voltage in this receiver is lower than $34.0 \pm 1\text{kV}$. In case any component having influence on the high voltage is replaced, confirm that high voltage with minimum BRIGHTNESS and CONTRAST is lower than $34.0 \pm 1\text{kV}$. To measure high voltage use a High Impedance High Voltage meter. Connect (-) to chassis earth and (+) to the CRT Anode button. (See the following connection diagram.)

Note: Turn power switch OFF without fail before the connection to the Anode button is made.

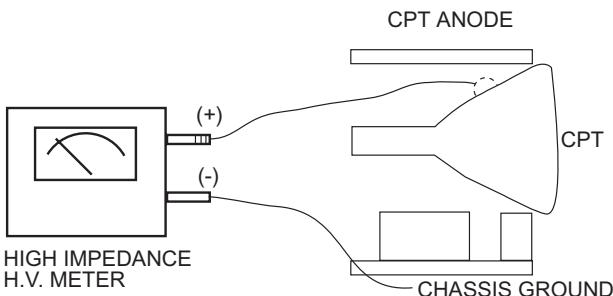

PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in HITACHI television receivers have special safety-related characteristics. These are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified with an  mark in the schematics and parts list in this Service Manual.

The use of a substitute replacement component which does not have the same safety characteristics as the HITACHI-recommended replacement component, shown in the parts list in this Service Manual, may create shock, fire, X-radiation, or other hazards.

Production safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current HITACHI Service Manual. A subscription to, or additional copies of HITACHI Service Manuals may be obtained at a nominal charge from HITACHI Sales Corporation.

X-Radiation

TUBE: The primary source of X-Radiation in this receiver is the picture tube. The tube utilized in this chassis is specially constructed to limit X-Radiation emissions. For continued X-Radiation protection, the replacement tube must be the same type as the original HITACHI-approved type.

When troubleshooting and making test measurements in a receiver with an excessive high voltage problem, avoid being unnecessarily close to the picture tube and the high voltage component.

Do not operate the chassis longer than is necessary to locate the cause of excessive voltage.

This Service Manual is intended for qualified service technicians; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual. Improperly per-

formed repairs can adversely affect the safety and reliability of the product and may void warranty. Consumers should not risk trying to do the necessary repairs and should refer to a qualified service technician.

WARNING

Lead in solder used in this product is listed by the California Health and Welfare agency as a known reproductive toxicant which may cause birth defects or other reproductive harm (California Health and Safety Code, Section 25249.5).

When servicing or handling circuit boards and other components which contain lead in solder, avoid unprotected skin contact with solder. Also, when soldering do not inhale any smoke or fumes produced.

SAFETY NOTICE USE ISOLATION TRANSFORMER WHEN SERVICING

Components having special safety characteristics identified by  on the parts list in this service manual and its supplements and bulletins. Before servicing this product, it is important that the service technician read and follow the "Safety Precautions" and the "Product Safety Notices" in this Service Manual.

For continued X-Radiation protection, replace picture tube with original type or HITACHI equivalent type.

POWER SOURCE

This television receiver is designed to operate on 120 Volts/60Hz, AC house current. Insert the power cord into a 120 Volts/60Hz outlet.

NEVER CONNECT THE TV TO OTHER THAN THE SPECIFIED VOLTAGE OR TO DIRECT CURRENT.

SERVICING PRECAUTIONS

CAUTION: Before servicing instruments covered by this service data and its supplements and addenda, read and follow the SAFETY PRECAUTIONS on page 3 of this publication.

NOTE: If unforeseen circumstances create conflict between the following servicing precautions and any of the safety precautions on page 3 of this publication, always follow the safety precautions. Remember: Safety First.

General Servicing Guidelines

1. Always unplug the instrument AC power cord from the AC power source before:
 - a. Removing or reinstalling any component, circuit board, module, or any other instrument assembly.
 - b. Disconnecting or reconnecting any instrument electrical plug or other electrical connection.
 - c. Connecting a test substitute in parallel with an electrolytic capacitor in the instrument.
- CAUTION:** A wrong part substitution or incorrect polarity installation of electrolytic capacitors may result in an explosion hazard.
- d. Discharging the picture tube anode.
2. Test high voltage only by measuring it with an appropriate high voltage meter or other voltage measuring device (DVM, FETVOM, etc.) equipped with a suitable high voltage probe. Do not test high voltage by "drawing an arc."
3. Discharge the picture tube's anode by (a) first connecting one end of an insulated clip lead to the degaussing or kine aquadag grounding system shield at the point where the picture tube socket ground lead is connected, and then (b) touch the other end of the insulated clip lead to the picture tube high voltage output, using an insulated handle to avoid personal contact with high voltage.
4. Do not spray chemicals on or near this instrument or any of its assemblies.
5. Unless specified otherwise in these service data, clean electrical contacts by applying the following mixture to the contacts with a pipe cleaner, cotton-tipped stick or comparable nonabrasive applicator: 10% (by volume) Acetone and 90% (by volume) isopropyl alcohol (90%-99% strength).
CAUTION: This is a flammable mixture. Unless specified otherwise in these service data, lubrication of contacts is not required.
6. Do not defeat any plug/socket B+ voltage interlocks which instruments covered by this service data might be equipped.
7. Do not apply AC power to this instrument and/or any of its electrical assemblies unless all solid-state device heat-sinks are correctly installed.

8. Always connect the test instrument ground lead to the appropriate instrument chassis ground before connecting the test instrument positive lead. Always remove the test instrument ground lead last.

9. Use with this instrument only the test fixtures specified in this service data.

CAUTION: Do not connect the test fixture ground strap to any heatsink in this instrument.

Electrostatically Sensitive (ES) Devices

Some semiconductor (solid state) devices can be damaged easily by static electricity. Such components commonly are called Electrostatically Sensitive (ES) Devices. Examples of typical ES devices are integrated circuits and some field-effect transistors and semiconductor "chip" components. The following techniques should be used to help reduce the incidence of component damage caused by static electricity.

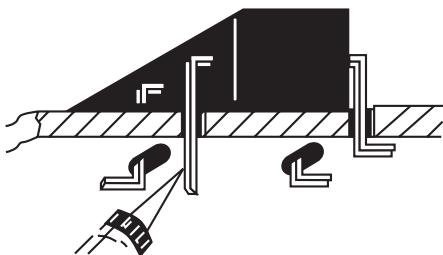

1. Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any electrostatic charge on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging wrist strap device, which should be removed for potential shock reasons prior to applying power to the unit under test.
2. After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge build-up or exposure of the assembly.
3. Use only a grounded-tip soldering iron to solder or desolder ES devices.
4. Use only an anti-static type solder removal device. Some solder removal devices not classified as "anti-static" can generate electrical charges sufficient to damage ES device.
5. Do not use freon-propelled chemicals. These can generate electrical charges sufficient to damage ES devices.
6. Do not remove a replacement ES device from its protective package until immediately before you are ready to install it. (Most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive material.)
7. Immediately before removing the protective material from the leads of a replacement ES device, touch the protective material to the chassis or circuit assembly into which the device will be installed.
CAUTION: Be sure no power is applied to the chassis or circuit, and observe all other safety precautions.
8. Minimize bodily motions when handling unpackaged replacement ES devices. (Otherwise harmless motion such as the brushing together of your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity sufficient to damage an ES device.)

General Soldering Guidelines

1. Use a grounded-tip, low-wattage soldering iron and appropriate tip size and shape that will maintain tip temperature within the range 500°F to 600°F.
2. Use an appropriate gauge of resin-core solder composed of 60 parts tin/40 parts lead.
3. Keep the soldering iron tip clean and well-tinned.
4. Thoroughly clean the surfaces to be soldered. Use a small wire-bristle (0.5 inch or 1.25 cm) brush with a metal handle. Do not use freon-propelled spray-on cleaners.
5. Use the following desoldering technique.
 - a. Allow the soldering iron tip to reach normal temperature (500°F to 600°F).
 - b. Heat the component lead until the solder melts. Quickly draw away the melted solder with an anti-static, suction-type solder removal device or with solder braid.

CAUTION: Work quickly to avoid overheating the circuit board printed foil.
6. Use the following soldering technique.
 - a. Allow the soldering iron tip to reach normal temperature (500°F to 600°F).
 - b. First, hold the soldering iron tip and solder strand against the component lead until the solder melts.
 - c. Quickly move the soldering iron tip to the junction of the component lead and the printed circuit foil, and hold it there only until the solder flows onto and around both the component lead and the foil.
 - d. Closely inspect the solder area and remove any excess or splashed solder with a small wire-bristle brush.

CAUTION: Work quickly to avoid overheating the circuit board printed foil or components.

Use Soldering Iron to Pry Leads

IC Removal/Replacement

Some Hitachi unitized chassis circuit boards have slotted holes (oblong) through which the IC leads are inserted and then bent flat against the circuit foil. When holes are the slotted type, the following technique should be used to remove and replace the IC. When working with boards using the familiar round hole, use the standard technique as outlined in paragraphs 5 and 6 above.

Removal

1. Desolder and straighten each IC lead in one operation by gently prying up on the lead with the soldering iron tip as the solder melts.

2. Draw away the melted solder with an anti-static suction-type solder removal device (or with solder braid) before removing the IC.

Replacement

1. Carefully insert the replacement IC in the circuit board.
2. Carefully bend each IC lead against the circuit foil pad and solder it.
3. Clean the soldered areas with a small wire-bristle brush. (It is not necessary to reapply acrylic coating to areas.)

"Small-signal" Discrete Transistor Removal/Replacement

1. Remove the defective transistor by clipping its leads as close as possible to the component body.
2. Bend into a "U" shape the end of each of three leads remaining on the circuit board.
3. Bend into a "U" shape the replacement transistor leads.
4. Connect to replacement transistor leads to the corresponding leads extending from the circuit board and crimp the "U" with long nose pliers to insure metal to metal contact, then solder each connection.

Power Output Transistor Devices Removal/Replacement

1. Heat and remove all solder from around the transistor leads.
2. Remove the heatsink mounting screw (if so equipped).
3. Carefully remove the transistor from the circuit board.
4. Insert new transistor in circuit board.
5. Solder each transistor lead, and clip off excess lead.
6. Replace heatsink.

Diode Removal/Replacement

1. Remove defective diode by clipping its leads as close as possible to diode body.
2. Bend the two remaining leads perpendicularly to the circuit board.
3. Observing diode polarity, wrap each lead of the new diode around the corresponding lead on the circuit board.
4. Securely crimp each connection and solder it.
5. Inspect (on the circuit board copper side) the solder joints of the two "original leads". If they are not shiny, reheat them and, if necessary, apply additional solder.

Fuses and conventional Resistor Removal/Replacement

1. Clip each fuse or resistor lead at top of circuit board hollow stake.
2. Securely crimp leads of replacement component around stake 1/8 inch from top.
3. Solder the connections.

CAUTION: Maintain original spacing between the replaced component and adjacent components and the circuit board, to prevent excessive component temperatures.

Circuit Board Foil Repair

Excessive heat applied to the copper foil of any printed circuit board will weaken the adhesive that bonds the foil to the circuit board, causing the foil to separate from, or "lift-off" the board. The following guidelines and procedures should be followed whenever this condition is encountered.

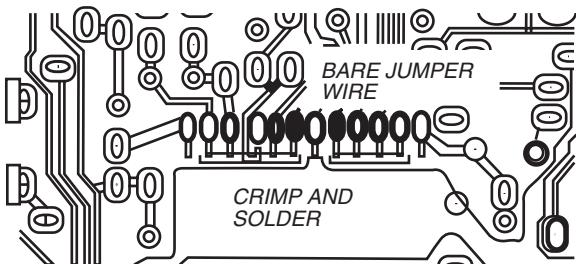

In Critical Copper Pattern Areas

High component/copper pattern density and/or special voltage/current characteristics make the spacing and integrity of copper pattern in some circuit board areas more critical than in others. The circuit foil in these area is designated as Critical Copper Pattern. Because Critical Copper Pattern requires special soldering techniques to ensure the maintenance of reliability and safety standards, contact your Hitachi personnel.

At IC Connections

To repair defective copper pattern at IC connections, use the following procedure to install a jumper wire on the copper pattern side of the circuit board. (Use this technique only on IC connections.)

1. Carefully remove the damaged copper pattern with a sharp knife. (Remove only as much copper as absolutely necessary.)
2. Carefully scratch away the solder resist and acrylic coating (if used) from the end of the remaining copper pattern.

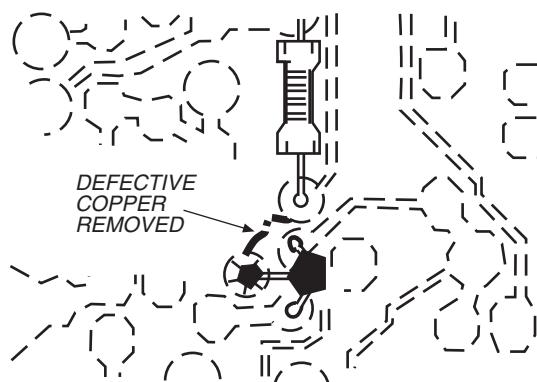

Install Jumper Wire and Solder

3. Bend a small "U" in one end of a small-gauge jumper wire and carefully crimp it around the IC pin. Solder the IC connection.
4. Route the jumper wire along the path of the cut-away copper pattern and let it overlap the previously scraped end of the good copper pattern. Solder the overlapped area, and clip off any excess jumper wire.

At Other Connections

Use the following technique to repair defective copper pattern at connections other than IC Pins. This technique involves the installation of a jumper wire on the component side of the circuit board.

Insulated Jumper Wire

1. Remove the defective copper pattern with a sharp knife. Remove at least 1/4 inch of copper, to ensure hazardous condition will not exist if the jumper wire opens.
2. Trace along the copper pattern from both wire sides of the pattern break and locate the nearest component directly connected to the affected copper pattern.
3. Connect insulated 20-gauge jumper wire from the nearest component on one side of the pattern break to the lead of the nearest component on the other side. Carefully crimp and solder the connections.

CAUTION: Be sure the insulated jumper wire is dressed so that it does not touch components or sharp edges.

Frequency Synthesis (FS) Tuning Systems

1. Always unplug the instrument AC power cord before disconnecting or reconnecting FS tuning system cables and before removing or inserting FS tuning system modules.
2. The FS tuner must never be disconnected from the FS tuning control module while the power is applied to the instrument.
3. When troubleshooting intermittent problems that might be caused by defective cable connection(s) to the FS tuning system, remove the instrument AC power as soon as the defective connector is found and finish confirming the bad connection with a continuity test. This procedure will reduce the probability of electrical overstress of the FS system semi-conductor components.

NOTE: These components are affixed with glue. Be careful not to break or damage any foil under the component or at the pins of the ICs when removing. Usually applying heat to the component for a short time while twisting with tweezers will break the component loose.

Leadless Chip Components (surface mount)

Chip components must be replaced with identical chips due to critical foil track spacing. There are no holes in the board to mount standard transistors or diodes. Some chip capacitor or resistor board solder pads may have holes through the board, however the hole diameter limits standard resistor replacement to 1/8 watt. Standard capacitors may also be limited for the same reason. It is recommended that identical chip components be used.

Chip resistors have a three digit numerical resistance code -1st and 2nd significant digits and a multiplier. Example: 162 = 1600 or 1.6KΩ resistor, 0 = 0Ω (jumper).

Chip capacitors generally do not have the value indicated on the capacitor. The color of the component indicates the general range of the capacitance.

Chip transistors are identified by a two letter code. The first letter indicates the type and the second letter, the grade of transistor.

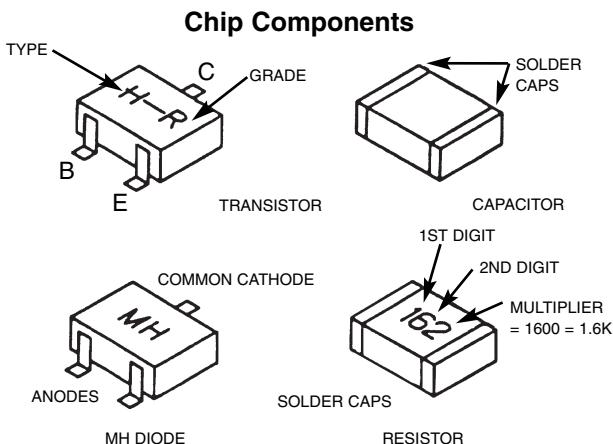

Chip diodes have a two letter identification code as per the code chart and are a dual diode pack with either common anode or common cathode. Check the parts list for correct diode number.

Component Removal

1. Use solder wick to remove solder from component end caps or terminals.
2. Without pulling up, carefully twist the component with tweezers to break the adhesive.
3. Do not reuse removed leadless or chip components since they are subject to stress fracture during removal.

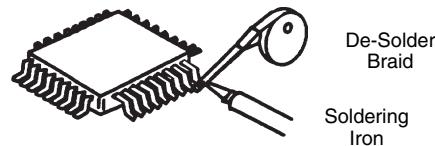

Chip Component Installation

1. Put a small amount of solder on the board soldering pads.
2. Hold the chip component against the soldering pads with tweezers or with a miniature alligator clip and apply heat to the pad area with a 30 watt iron until solder flows. Do not apply heat for more than 3 seconds.

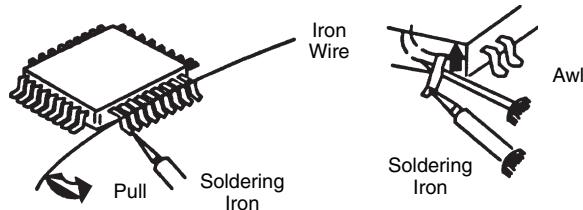

How to Replace Flat-IC —Required Tools—

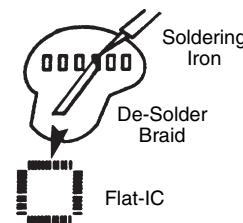

- Soldering iron
 - De-solder braids
 - Iron wire or small awl
 - Magnifier
1. Remove the solder from all of the pins of a Flat-IC by using a de-solder braid.

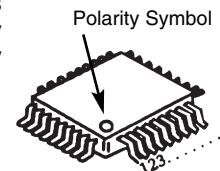

2. Put the iron wire under the pins of the Flat-IC and pull it in the direction indicated while heating the pins using a soldering iron. A small awl can be used instead of the iron wire.

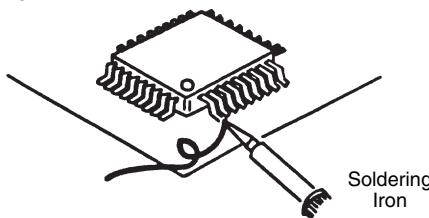

3. Remove the solder from all of the pads of the Flat-IC by using a de-solder braid.

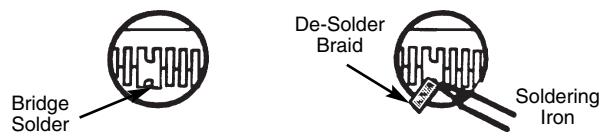

4. Position the new Flat-IC in place (apply the pins of the Flat-IC to the soldering pads where the pins need to be soldered). Properly determine the positions of the soldering pads and pins by correctly aligning the polarity symbol.

5. Solder all pins to the soldering pads using a fine tipped soldering iron.

6. Check with a magnifier for solder bridge between the pins or for dry joint between pins and soldering pads. To remove a solder bridge, use a de-solder braid as shown in the figure below.

TECHNICAL SPECIFICATIONS

POWER RATINGS

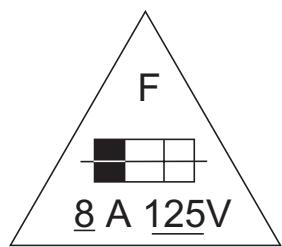

36UDX10S/MF1Z 208 Max. Watts
32UDX10S/MF1Y 208 Max. Watts

COLOR PICTURE TUBE

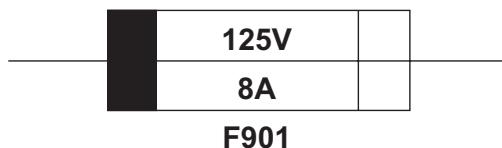

36UDX10S/MF1Z A90LPY30X50
32UDX10S/MF1Y A80LJF30X50

CAUTION: Below is an EXAMPLE only. See Replacement Parts List for details. The following symbol near the fuse indicates fast operating fuse (to be replaced). Fuse ratings appear within the symbol.

Example:

"RISK OF FIRE - REPLACE FUSE AS MARKED"

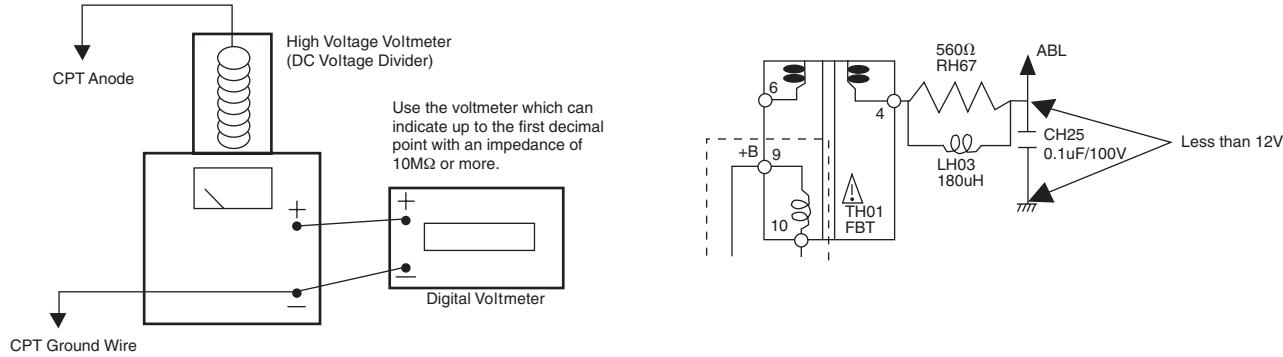

The rating of fuse F901 is 8.0A-125V.
Replace with the same type fuse for continued protection against fire.

TECHNICAL CAUTIONS

High Voltage Limiter Circuit Operation Check and Overvoltage Protection Circuit Operation Check

Preparation

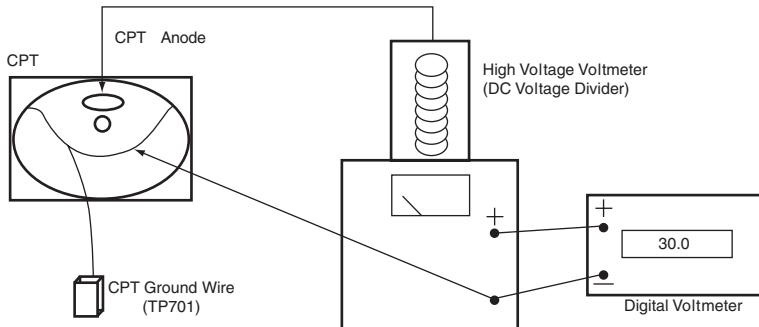

1. Connect a High Voltage Voltmeter between CPT Anode terminal (Anode cap side) and Ground.
2. Set the AC input voltage to $120\pm3V$.
3. Receive Circle Pattern or Broadcast Signal and set “BRIGHTNESS” and “CONTRAST” to maximum. Adjust the SCREEN VR so that Beam Current is $I_B\pm0.1mA$. (The voltage at ABL terminal (C425) should be 12V or less.)

Procedure

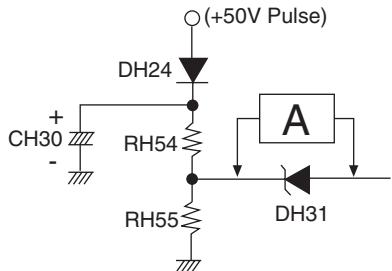

1. Check that the normal High Voltage and +B Voltage as below.

CHASSIS	EHT $\pm 1kV$	$I_B\pm 0.1mA$	+B
MF1Z	$30.0\pm 1kV$	$1.7\pm 0.1mA$	$142\pm 1.5V$
MF1Y	$29.0\pm 1kV$	$1.5\pm 0.1mA$	$142\pm 1.5V$

Use the voltmeter impedance 10MΩ or more with indication to the first decimal place.

2. Connect a $10k\Omega$ 1/8W resistor to both ends of DH31 and check that power is turned off.

3. Disconnect the AC plug and remove the $10k\Omega$ resistor.

FRONT PANEL CONTROLS

A detailed explanation of the circled numbers is on page 13.

FRONT PANEL CONTROLS

① MENU button

This button allows you to enter the MENU, making it possible to set TV features to your preference without using the remote.

② INPUT/EXIT button

Press this button to select the current antenna source, VIDEO: 1, 2, 3 or alternate antenna source. Your selection is shown in the top right corner of the screen. This button also serves as the EXIT button when in MENU mode.

③ CHANNEL selector

Press these buttons until the desired channel appears in the top right corner of the TV screen. These buttons also serve as the cursor down (▼) and up (▲) buttons when in MENU mode.

④ VOLUME level

Press these buttons for your desired sound level. The volume level will be displayed on the TV screen. These buttons also serve as the cursor left (◀) and right (▶) buttons when in MENU mode.

⑤ POWER button

Press this button to turn the TV on or off.

⑥ POWER light (LED)

You will see a red light when the TV is turned on.

⑦ REMOTE CONTROL sensor

Point your remote at this area when selecting channels, adjusting volume, etc.

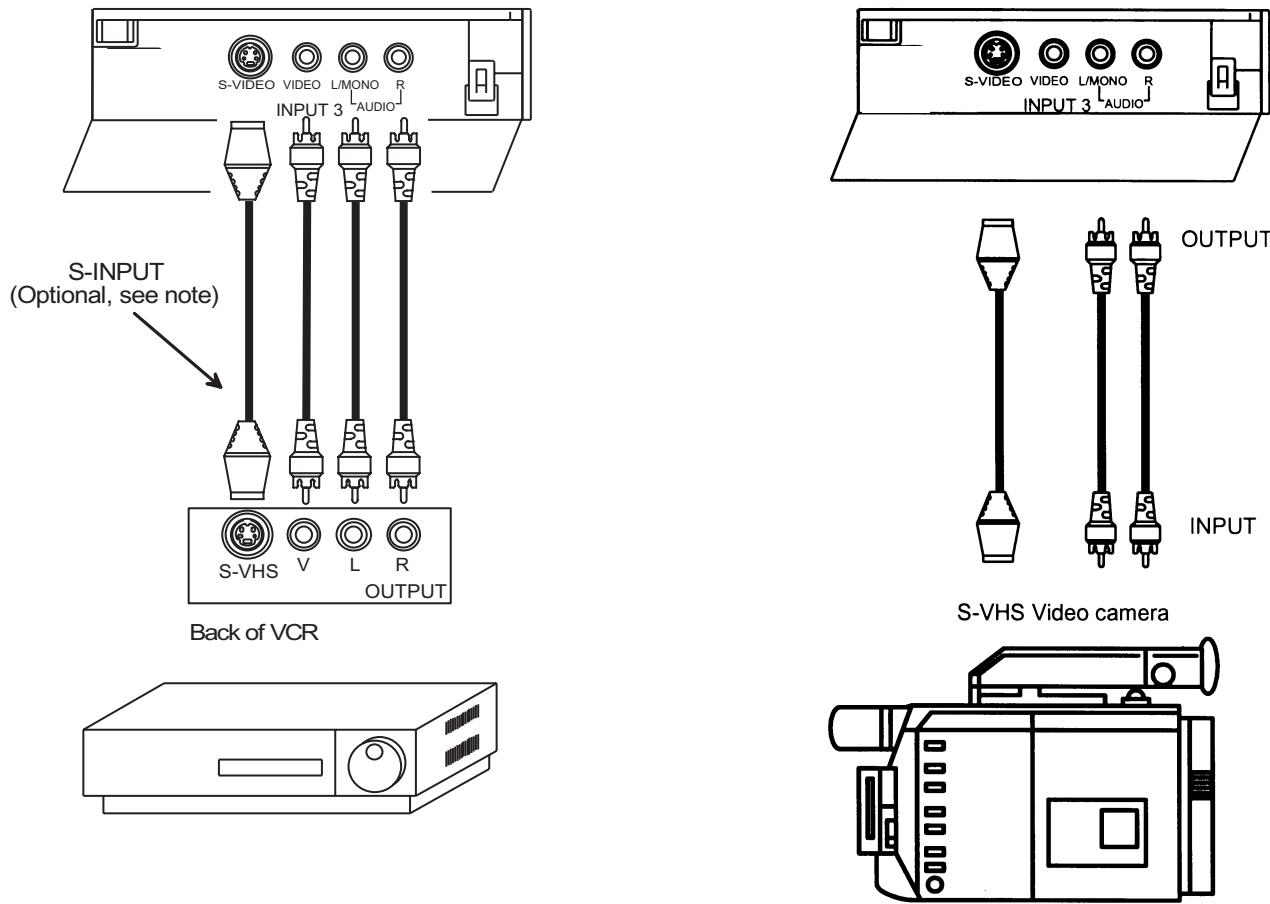

⑧ FRONT INPUT JACKS (for VIDEO: 3)

Use these audio/video jacks for a quick hook-up from a camcorder or VCR to instantly view your favorite show or new recording. Press the INPUT button until VIDEO: 3 appears in the top right corner of the TV screen. If you have mono sound, insert the audio cable into the left audio jack.

- NOTES:**
1. Your HITACHI TV will appear to be turned OFF if there is no video input when VIDEO: 1, 2 or 3 is selected. Check the Power Light to make sure the TV is turned off when not in use.
 2. To see an auto-demonstration of the on-screen displays with HELP text displayed, press and hold the POWER button on the TV set for approximately five seconds. Press the POWER button on the TV again to end the auto-demonstration.

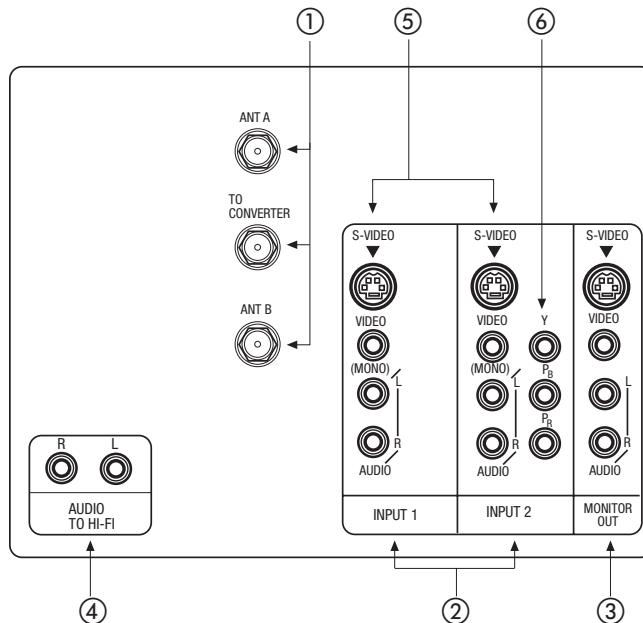

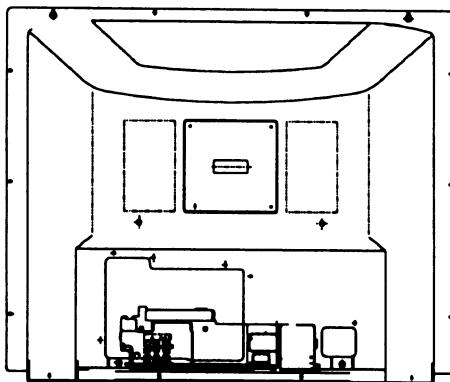

FRONT PANEL JACKS AND CONNECTIONS

The front panel jacks are provided as a convenience to allow you to easily connect a camcorder or VCR as shown in the following examples:

- NOTE:**
1. Completely insert connection cord plugs when connecting to front panel jacks. If you do not, the played back picture may be abnormal.
 2. If you have a S-VHS VCR, use the S-INPUT cable in place of the standard video cable.
 3. If you have a mono VCR, insert the audio cable into the left audio jack of your TV.

REAR PANEL OF TELEVISION

**① Antenna Inputs/Output**

The remote control allows you to switch between two separate 75-Ohm RF antenna inputs, ANT A and ANT B. ANT A input can be displayed as a main picture or sub-picture. ANT B can only be displayed as a main picture. (ANT B cannot be displayed as a sub picture.) The antenna output labeled "TO CONVERTER" allows the ANT A connection to pass directly to a different source such as a cable box.

NOTE: You may use VIDEO, S-VIDEO, or COMPONENT Y-PBPR inputs to connect to INPUT 2, but only one of these inputs may be used at one time.

② Audio/Video Inputs 1, 2

The INPUT button will step through each video source and antenna source input each time it is pressed. Use the audio and video inputs to connect external devices, such as VCRs, camcorders, laserdisc players, etc. (If you have mono sound, insert the audio cable into the left channel jack.)

③ Monitor Out

These jacks provide fixed audio and video signals which are used for recording. Use the S-VIDEO output for high quality video output.

④ Audio to HI-FI

These jacks provide variable audio output to a separate stereo amplifier. With this connection, the audio to the stereo can be controlled by the television's main volume. Use these jacks for the SURROUND Left and Right channels.

⑤ S-Video Inputs

Inputs 1,2 provide S-Video (Super Video) jacks for connecting equipment with S-Video output capability.

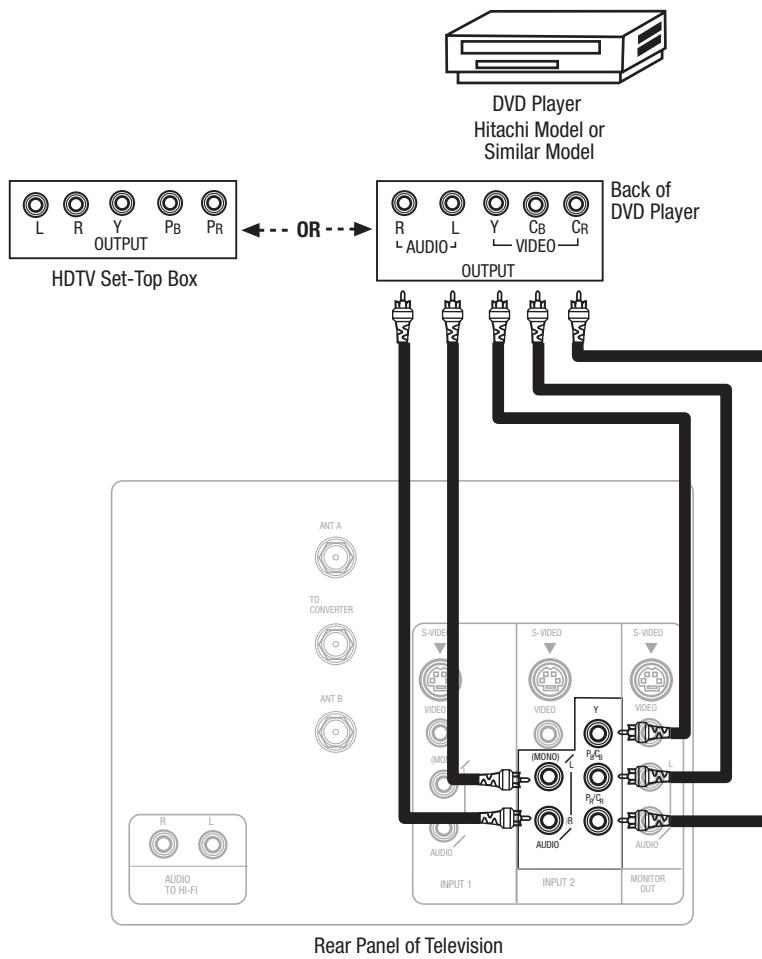

⑥ Component: Y-P_BP_R Input

Input 2 provides Y-P_BP_R jacks for connecting equipment with this capability, such as a DVD player or Set Top Box.

CONNECTING EXTERNAL VIDEO SOURCES

CONNECTING A STEREO LASERDISC/DVD PLAYER OR HDTV SET TOP BOX TO INPUT 2 COMPONENT: Y-P_BP_R.

1. Connect the cable from the Y OUT of the Laserdisc/DVD player or HDTV set top box to the INPUT (Y) jack, as shown on the TV set below.
2. Connect the cable from the C_B/P_B OUT or B-Y OUT of the Laserdisc/DVD player or HDTV set top box to the INPUT (P_B) jack.
3. Connect the cable from the C_R/P_R OUT or R-Y OUT of the Laserdisc/DVD player or HDTV set top box to the INPUT (P_R) jack.
4. Connect the cable from the AUDIO OUT R of the Laserdisc/DVD player or HDTV set top box to the INPUT (AUDIO/R) jack.
5. Connect the cable from the AUDIO OUT L of the Laserdisc/DVD player or HDTV set top box to the INPUT (AUDIO/L) jack.
6. Press the INPUT button, to view the program from the Laserdisc/DVD player or HDTV set top box. The VIDEO icon disappears automatically after approximately eight seconds.
7. Press the INPUT button to return to the previous channel.

NOTE: Completely insert the connection cord plugs when connecting to rear panel jacks. The picture and sound that is played back will be abnormal if the connection is loose.

TIPS ON REAR PANEL CONNECTIONS

S-VIDEO connections are provided for high performance laserdisc players, VCRs etc. that have this feature. Use these connections in place of the standard video connection if your device has this feature.

If your device has only one audio output (mono sound), connect it to the left audio jack on the television.

Refer to the operating guide of your other electronic equipment for additional information on connecting your hook-up cables.

A single VCR can be used for VCR #1 and VCR #2, but note that a VCR cannot record its own video or line output (INPUT: 1 in the example on page 19). Refer to your VCR operating guide for more information on line input-output connections.

You may use VIDEO, S-VIDEO, or COMPONENT: Y-P_BP_R inputs to connect to Input 2, but only one of these may be used at a time.

Connect only 1 component (VCR, DVD player, camcorder, etc.) to each input jack.

COMPONENT: Y-P_BP_R connections are provided for high performance components, such as DVD players. Use these connections in place of the standard video connection if your device has this feature.

When using the Y-P_BP_R input jack, connect your components audio output to the TV's Input 2 Left and Right Audio input jacks.

Your component outputs may be labeled Y, B-Y, and R-Y. In this case, connect the components B-Y output to the TV's Pb input and the components R-Y output to the TV's P_R input.

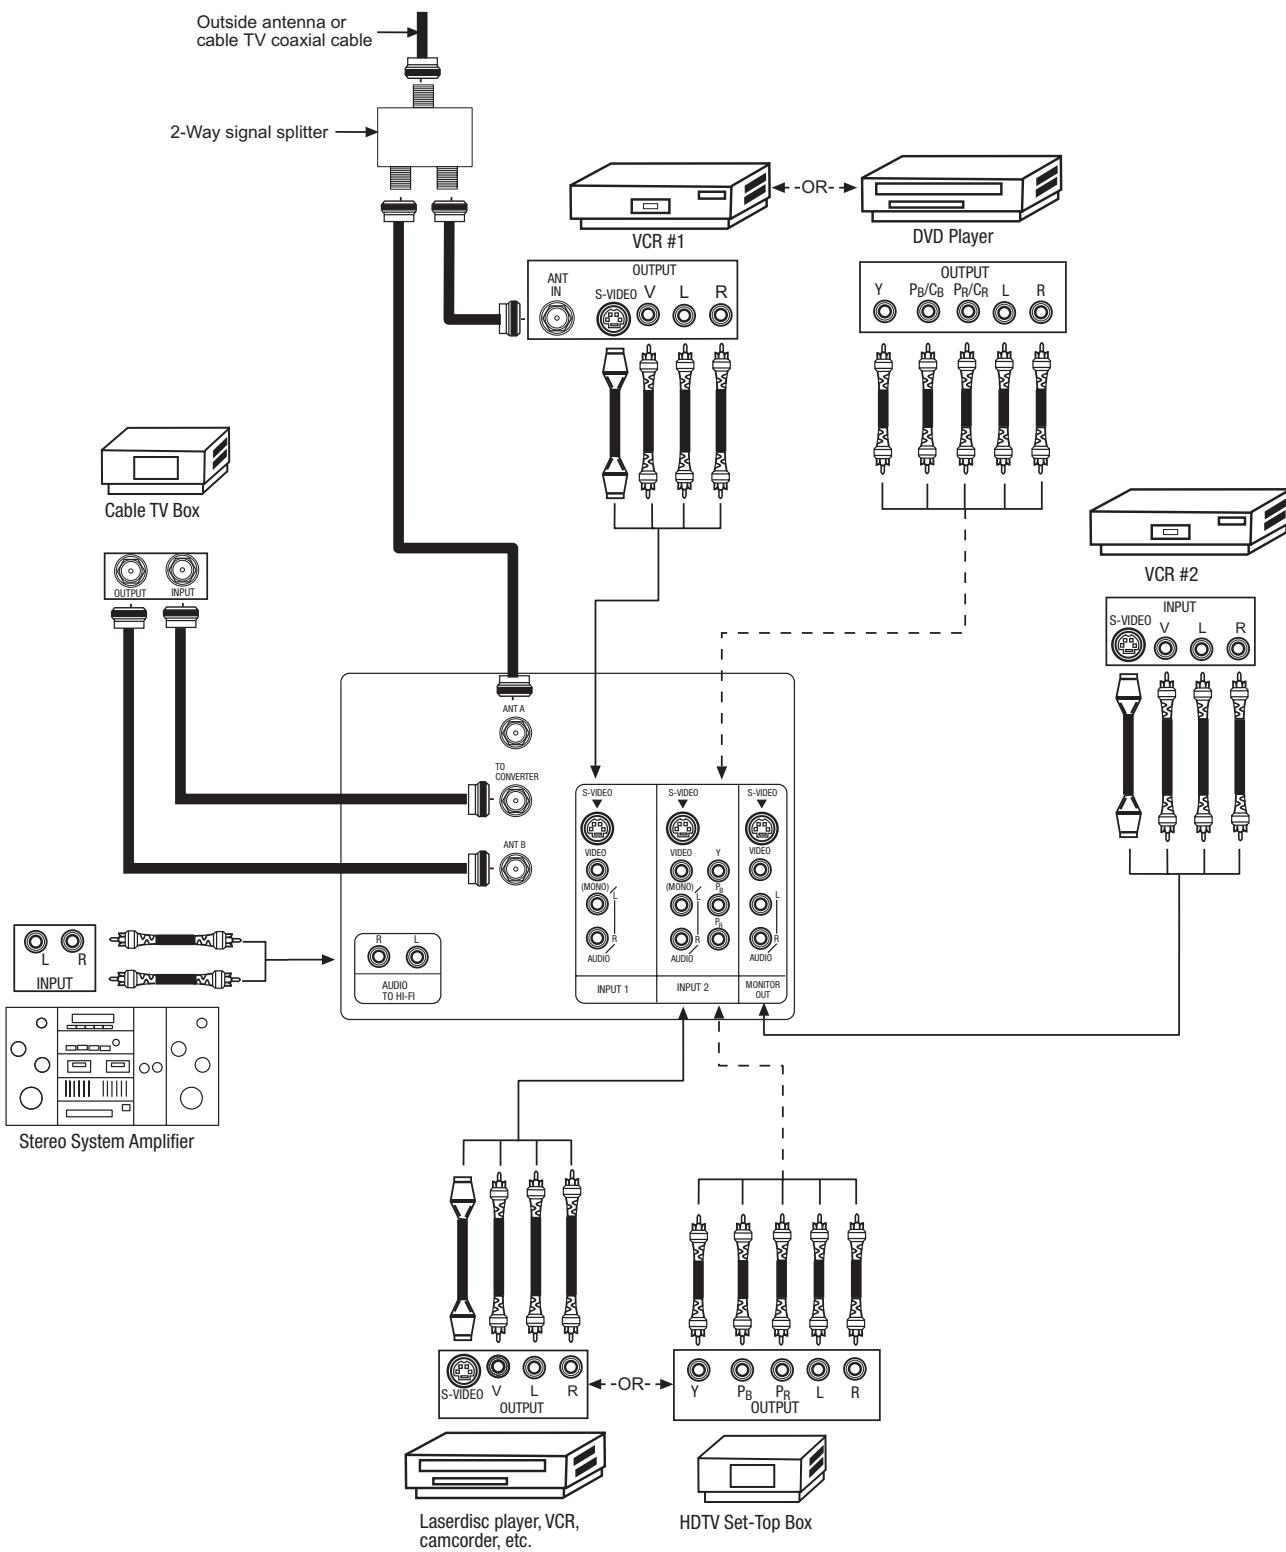

Your component outputs may be labeled Y-C_BC_R. In this case, connect the components C_B output to the TV's P_B input and the components C_R output to the TV's P_R input.

It may be necessary to adjust TINT to obtain optimum picture quality when using the Y-P_BP_R inputs.

To ensure no copyright infringement, the MONITOR OUT output will be abnormal, when using the Y-P_BP_R jacks.

REAR SPEAKER TERMINAL CONNECTIONS

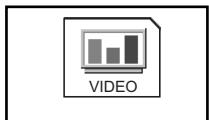

TYPICAL FULL-FEATURE SETUP

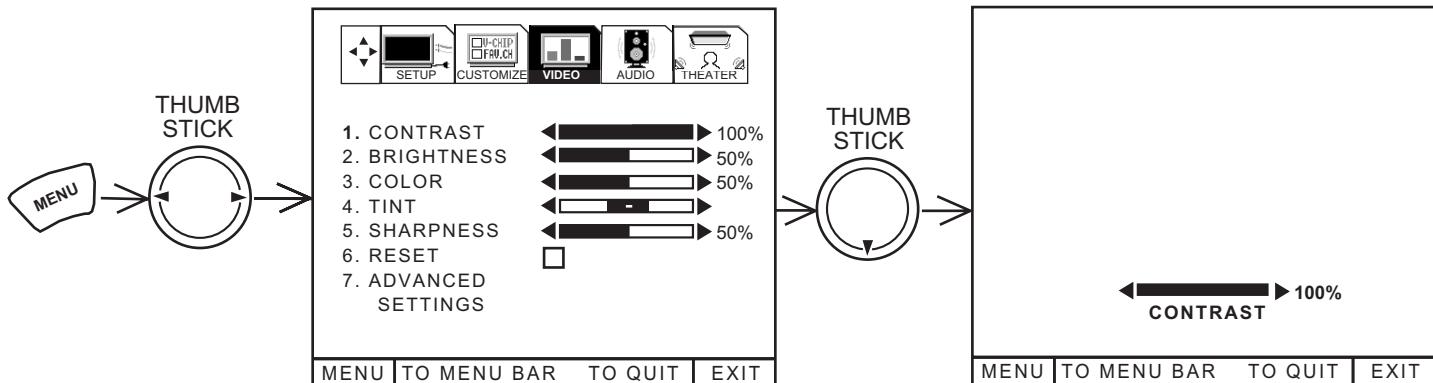

NOTE:

1. Connect only 1 component to each input jack.
2. Follow connections that pertain to your personal entertainment system.

CUSTOMIZED PICTURE AND SOUND ADJUSTMENTS

Select VIDEO to adjust picture settings and improve picture quality.

Use the THUMB STICK ▲ or ▼ to highlight the function to be adjusted.

Press the THUMB STICK ◀ or ▶ to adjust the function.

Press EXIT to quit menu.

NOTE: If CONTRAST is selected, you are adjusting CONTRAST. The additional menu items BRIGHTNESS, COLOR, TINT, and SHARPNESS can be selected and adjusted in the same manner.

CONTRAST

Use this function to change the contrast between black and white levels in the picture.

BRIGHTNESS

Use this function to adjust overall picture brightness.

COLOR

Use this function to adjust the level of color in the picture.

TINT

Use this function to adjust flesh tones so they appear natural.

SHARPNESS

Use this function to adjust the amount of fine detail in the picture.

RESET

When RESET is selected, press down on THUMB STICK to return video adjustments to factory preset conditions.

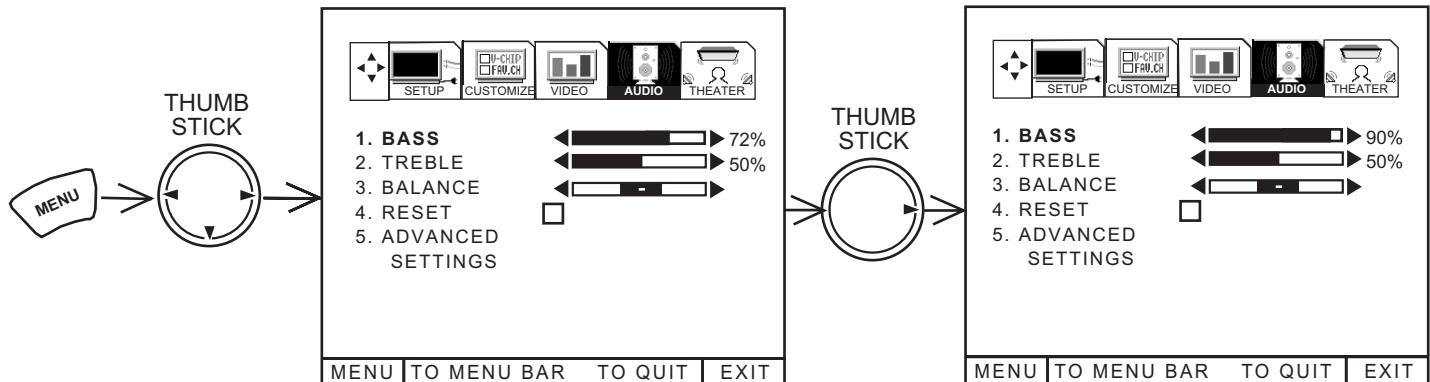

NOTE:

1. It may be necessary to adjust TINT to obtain optimum picture quality when using the COMPONENT VIDEO Y-P_BP_R input jack.
2. If you are using the COMPONENT VIDEO input jack (Y-P_BP_R) and notice that the TINT and COLOR are abnormal, check to make sure that COMPONENT SET - COLOR SYSTEM is set properly.

CUSTOMIZED PICTURE AND SOUND ADJUSTMENTS

Select AUDIO to adjust the TV to your preference and to improve the sound quality.

Use THUMB STICK ▲ or ▼ to highlight the function to be adjusted.

Press THUMB STICK ◀ or ▶ to adjust the function.

When RESET is highlighted, press down on THUMB STICK to reset audio settings to factory conditions.

Press EXIT to quit menu.

NOTE: If BASS is selected you are adjusting BASS. The additional menu items TREBLE and BALANCE can be selected and adjusted in the same manner.

BASS

This function controls the low frequency audio to all speakers.

TREBLE

This function controls the high frequency audio to all speakers.

BALANCE

This function will control the left to right balance of the TV internal speakers and the AUDIO TO HI FI output.

RESET

When RESET is selected, press CURSOR ▶ to return audio adjustments to factory preset conditions.

I. MAIN CHASSIS ADJUSTMENT

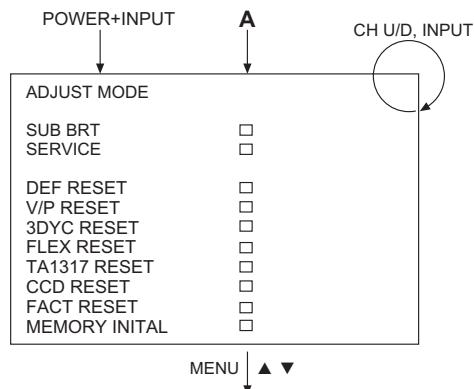

1. ADJUSTMENT PROCEDURE-START UP

1-1 How to Get to Adjustment Mode

Chassis adjustment can be done by using the front control panel buttons with CTV set turned off. Press "POWER" and "INPUT" keys at the same time, and hold for more than 3 seconds. The CTV set turns on in adjustment mode with OSD as follows.

Note:

Before making a data value change to any adjustment code, consider that previous data will be lost. We advise to make a paper note of these values before doing any adjustments.

"To Escape from Adjustment Mode"

Press "INPUT" to exit service adjustment mode.

Table 1
Adjustment Codes

ADJUSTMENT MODE OSD	ADJUSTMENT ITEM	ADJUSTMENT RANGE(HEX)	INITIAL DATA(HEX)	ADJUST * VALUE(HEX)
SUB BRI	Sub Brightness	3C~C3	80	88
TA1300

* This data is an approximate service code data. Fine adjustment must be done using the specified test procedure and adjustment tools.

1-2 Changing Data and Adjustment Code

When the CTV set is in adjustment mode, the cursor $\blacktriangle, \blacktriangledown, \blacktriangleleft, \blacktriangleright$ and MENU keys of the remote control or front panel may be used for the adjustment keys.

A. Use any Hitachi remote control when making an adjustment.

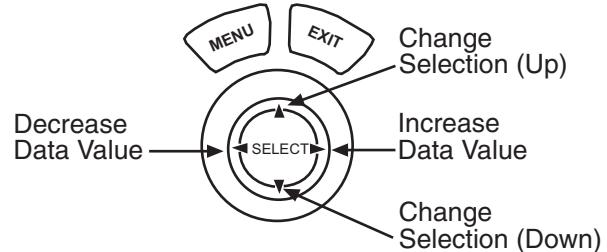

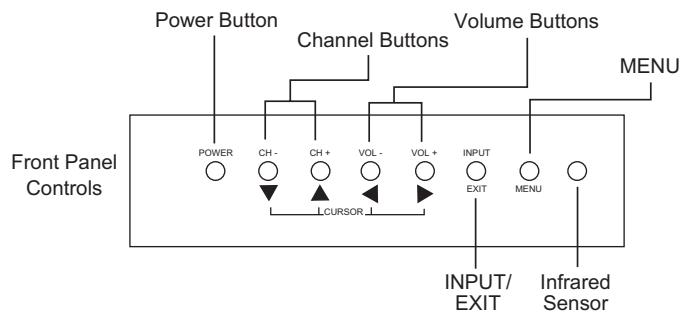

$\blacktriangle, \blacktriangledown$ keys are used for changing adjustment code.

$\blacktriangleleft, \blacktriangleright$ keys are used for changing data.

MENU key is used for changing "Cut Off Mode"/"Normal mode" (Refer to cut off adjustment), and to advance through the adjustment mode menu's.

B. To make a selection, use the CURSOR keys on front control panel or the Remote Control.

C. After finishing the necessary adjustment press the R/C EXIT key or EXIT key on the front panel. Adjustment mode is released and TV set returns to normal condition.

II. MEMORY INITIAL

1. MEMORY INITIALIZE OPERATION

Preparation

NOTE: The execution of this function returns the adjustment codes to the initial values, therefore, adjustment data will be lost. We advise taking a note of all values or at least the data from adjustment codes in table 1 before following the next procedure.

Checking Procedure

- (1) Enter Adjustment Mode by the method described in sub-items 1-1 and 1-2 from item I. "Main Chassis adjustment. Adjustment procedure start up."
- (2) From the first menu in Adjustment Mode, select MEMORY INITIAL adjust code.
- (3) Activate MEMORY INITIAL by pressing "Right" cursor key once.
- (4) Check that the receiving channel goes to CH03. Unit is set to factory settings and adjustment data changed to its initial values.

III. OPERATION CHECK

1. AFC OPERATION CHECK

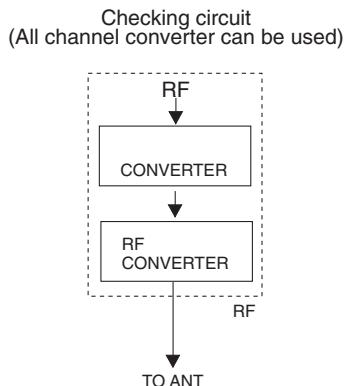

Preparation

- (1) Connect the circuit as shown below to the ANT terminal.

Checking Procedure

- (1) Receive a standard carrier (not offset) with the channel up/down or direct selection buttons.
- (2) Receive an offset signal of +1.5MHZ. Check that it is pulled into the standard tuning point. (Perform the channel selection operation.)
- (3) Receive an offset signal of -1.5MHZ. Check that it is pulled into the standard tuning point. (Perform the channel selection operation again.)

Note: Modulation signal should be used at the circle pattern and the color bar signal.

2. USER CONTROLS CIRCUIT OPERATION

CHECK

2-1 Channel Up/Down Selection

Preparation

- (1) Set the TV set so that VHF (11, 13CH), UHF (14, 46, 63CH) and CATV (A, E, P, WCH) can be received.
- (2) Set Signal Source mode to Antenna on the set up menu. (Press the Menu key, and select Setup, then select Signal Source mode, See next page.)

Checking Procedure

- (1) Check that VHF are received correctly by pressing CH Up (▲) or Down (▼) button.

Preparation

- (3) Set Signal Source mode to CATV 1.

Checking Procedure

- (2) Perform the same operation as in Item (1), and check that VHF and CATV are received correctly.

Preparation

- (4) Set Signal Source mode to CATV 2.

Checking Procedure

- (3) Perform the same operation as in Item (1), and check that VHF and CATV are received correctly.

Note: This check should be done to both ANT A and B.

2-2 CH Up/Down

Preparation

- (1) Set the TV set so that VHF (11, 13CH), UHF (14, 46, 63CH) and CATV (A, E, P, W CH) can be received.

Checking Procedure

- (1) Set Signal Source mode to Antenna on the SET UP menu.
- (2) Select Auto CH set mode and press (►) key on the set up menu. After Auto CH set, operation is completed. By pressing the channel Up (▲) or Down (▼) button, check that the channels having broadcast signal (s) can be received.
- (3) Set Signal Source mode to CATV 1.
- (4) Perform the same operation as in Item (2) and check that CATV can be received correctly.

SET UP MENU

Adjustment Preparation

- (2) Set the CHANNEL LIST mode (in SET UP menu).

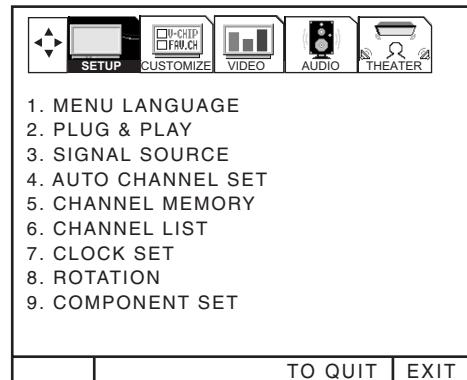

Note: CATV channels, actual input channels numbers and indicated channel numbers shown in Table 3 below.

Adjustment Procedure

- (5) Check that the item of SCAN of channels which can be selected as above is ON.

Note 1: CATV channels, actual input channel numbers and indicated channel numbers.

A	14
E	18
P	29
W	36

Note 2: This check should be done to both ANT A and B.

2-3 VOLUME UP/DOWN

Checking Procedure

- (1) Check that the volume level and volume indication is going up or down simultaneously by pressing volume Up (\blacktriangle) or Down (\blacktriangledown) button.

Volume 10

2-4 POWER ON/OFF

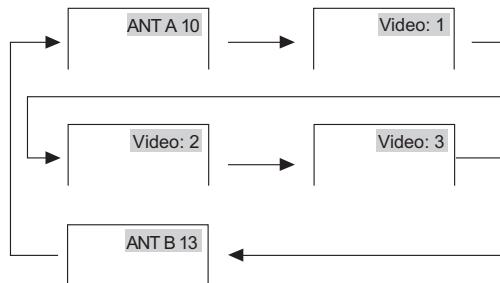

Checking Procedure

- (1) Check that the power alternates between On and Off with each press of the Power button.

2-5 INPUT

Checking Procedure

- (1) Check that the O.S.D. changes with every press of the Input button, as below.

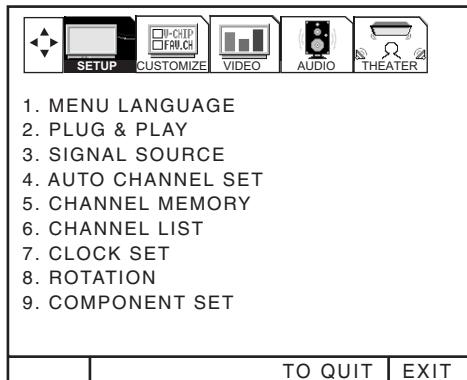

2-6 MENU

- (1) Check that the Menu O.S.D. displays by pressing Menu button.

Note: Menu O.S.D. is displayed as below.

OSD MENU

- (2) After Menu O.S.D. is displayed, check that front panel buttons function change as follows:

Menu	\rightarrow	MENU
CH Up	\rightarrow	\blacktriangle key
CH Down	\rightarrow	\blacktriangledown key
Volume Up	\rightarrow	\blacktriangleright key
Volume Down	\rightarrow	\blacktriangleleft key

2-7 MENU MODE (using Remo-con)

2-7-1 Set Up Mode

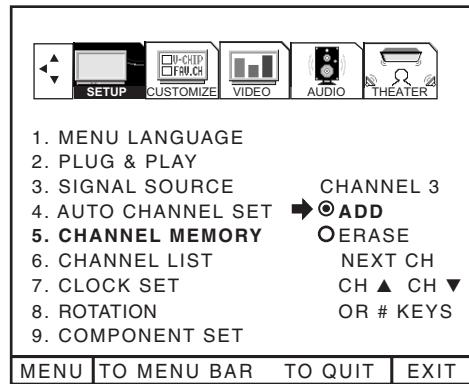

Preparation

- (1) Set to CHANNEL MEMORY mode (SET UP Menu).

Checking Procedure

- (1) Press \blacktriangleright once and ADD or ERASE the displayed channel by pressing the \blacktriangle or \blacktriangledown buttons.
(2) Press EXIT key to leave OSD MENU and by using Ch up/Down keys on the front panel or remote control, browse through the ADDED channels. The ERASED channels will not be displayed unless the # keys are used.

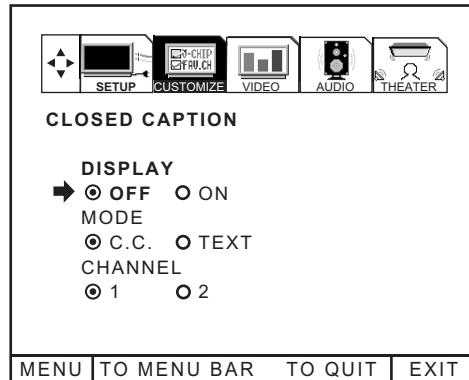

SET UP MENU

Preparation

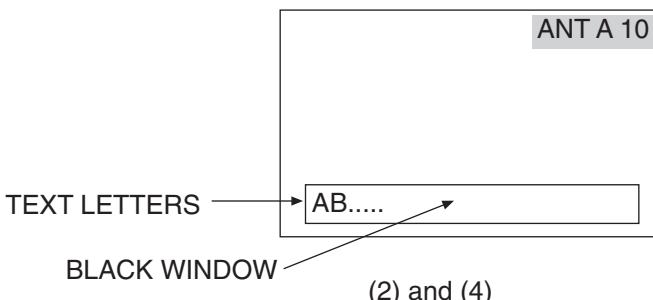

- (1) a. Set the mode to CLOSED CAPTION (CUSTOM Menu)
b. Receive signal having Closed Caption signal.

CUSTOM MENU

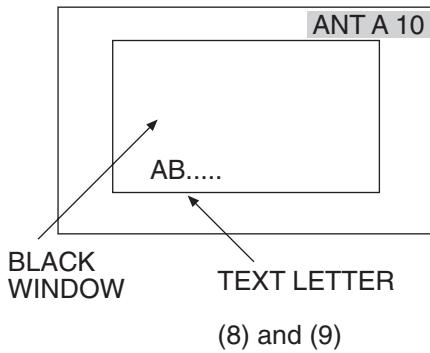

Checking Procedure

- (1) Set DISPLAY setting to ON with CURSOR \blacktriangleright . At this time, set the other settings as follows.
1. DISPLAY : ON
2. MODE : C.C.
3. CHANNEL : 1
(2) Check that the Caption corresponding to the above setting is displayed on the screen.
(3) Set CHANNEL to 2.
(4) Check that the Caption of Channel 2 is displayed on the screen.
(5) Set CHANNEL to 1.
(6) Check that the Caption of Channel 1 (Field 2) is displayed on the screen.
(7) Set the mode to TEXT.

- (8) Check that a black window appears and text letters are displayed at the center of the screen.
- (9) Repeat adjustment procedure from (3) to (6), and check that text letters are displayed corresponding to each mode.
- (10) Set the mode to CAPTION.
- (11) The black window should disappear returning to the state of (2).
- (12) Set ON/OFF to OFF.
- (13) Check that the Caption letters disappear.

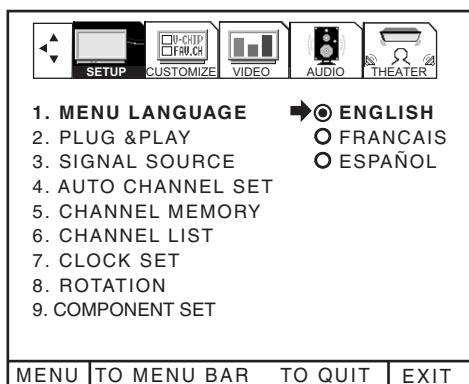

Preparation

- (2) Set to MENU LANGUAGE mode (SET UP Menu)

Checking Procedure

- (14) Check the language selection (ENGLISH, FRENCH, SPANISH) by pressing the ▼(▲) button.

SET UP MENU

2-7-2 Program Mode

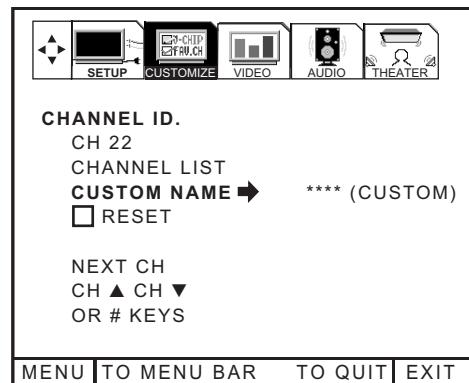

Preparation

- (1) Set to CHANNEL ID mode (CUSTOM Menu).
- (2) Select CUSTOM CH by pressing the ▲,▼ button.

Checking Procedure

- (1) Select the "A" by pressing the ▲,▼ button, and select the input position by pressing the ►,◀ button.
- (2) After pressing the "Recall" button, check that the indication of "AAAA" is the same as CH No. indication.
- (3) Select the Channel ID mode again. Select "RESET" by pressing the ▲,▼ button and press the ► button.
- (4) Check that the delete of "AAAA" when indicate the CH No., after press the "Recall" button.

CUSTOM MENU

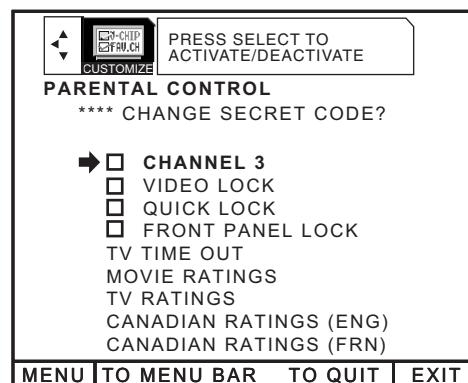

Preparation

- (3) Set to PARENTAL CONTROL mode, (CUSTOM MENU).

Checking Procedure

- (1) Select PARENTAL CONTROL by ► button.
- (2) Press "7" button 4 times. ("7777" is input.)
- (3) Select CHANNEL mode, and set to on by ► button, check that the picture becomes pitch-dark, and sound does not come out.
- (4) Set to PARENTAL CONTROL mode again.
- (5) Select CHANNEL mode and set to off by ► button.
- (6) Check that the picture and sound return to the previous condition.

CUSTOM MENU

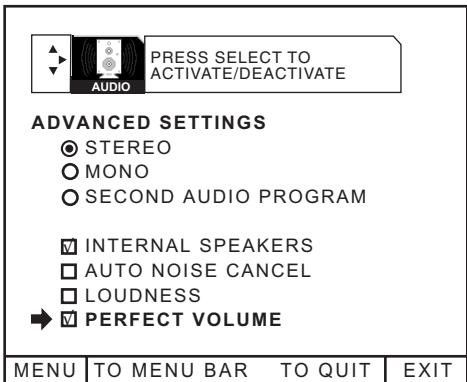

Preparation

- (4) Set PERFECT VOLUME mode (AUDIO Menu).

Checking Procedure

- (1) Press cursor ► button to set PERFECT VOLUME to ON.
- (2) Check that the audio level is the same for all channels.

AUDIO MENU

2-7-3 PARENTAL CONTROL (V-Chip) operation check

Preparation

- (1) Receive a channel with V-Chip signal.
- (2) Push MENU and select CUSTOM menu by using ◀ or ▶ button.
- (3) Select PARENTAL CONTROL by using ▲ or ▼ button.
- (4) Press ► button to set PARENTAL CONTROL mode.
- (5) Enter "7777" for SECRET CODE.
- (6) Select MOVIE RATINGS and TV RATING by using ▲ or ▼ button.
- (7) Press ► button to set MOVIE RATINGS and TV RATINGS.

Checking Procedure

- (1) Select MOVIE RATINGS MPAA (PG) and TV RATINGS (TV-14/ALL BLOCK)
- (2) Check that Picture & audio should be blocked as follows
"RATING BLOCKED" is displayed when picture is blocked.

Receive Signal	TV-PG	MPAA PG	TV-Y7-FV
Picture/Audio Condition	UNBLOCK	BLOCK	UNBLOCK

- (3) Select MOVIE RATINGS MPAA (PG-13) and TV RATINGS (TV-14/ALL BLOCK)
- (4) Check that Picture & audio should be blocked as follows
"RATING BLOCKED" is displayed when picture is blocked.

Receive Signal	TV-PG	MPAA PG	TV-Y7-FV
Picture/Audio Condition	BLOCK	UNBLOCK	UNBLOCK

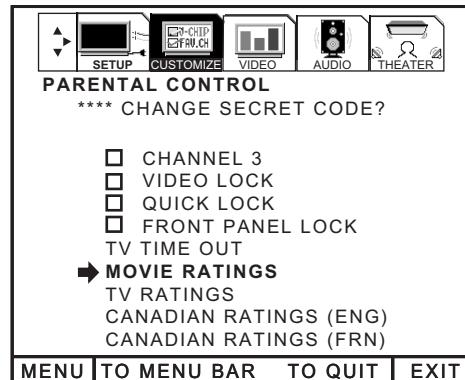

- (5) Select MOVIE RATINGS MPAA (PG-13) and TV RATINGS (TV-Y7/ALL BLOCK)
- (6) Check that Picture & audio should be blocked as follows
"RATING BLOCKED" is displayed when picture is blocked.

Receive Signal	TV-PG	MPAA PG	TV-Y7-FV
Picture/Audio Condition	BLOCK	UNBLOCK	BLOCK

- (7) Same check as (1) to (6) should apply for PIP sub picture. Main picture should receive a channel without V-chip signal. Sub picture should receive a channel with V-chip signal.

NOTE: User setting rating & receipt signal rating are displayed on top area of the screen when RECALL button is pressed.

1st line : User setting rating.
2nd line : Receipt signal rating.

2-7-4 SET CLOCK

Procedure

- (1) Select set up using ◀,▶ buttons.
- (2) Select clock set using ▲,▼ buttons.
- (3) Then press ► button to select clock set.
- (4) Select MANUAL using ► buttons.
- (5) Then press ▲,▼ button to select MANUAL.
- (6) The clock set should be set using the ▲,▼ buttons. The clock is started when the ◀ button is pressed, to go back to clock set mode.
- (7) Select I2C MENU mode by following Sub-items 1-1 and 1-2 instructions from page 22..
- (8) Select AFC/CLOCK TEST by using SELECT key.
- (9) Check that clock indication is displayed using the RECALL button. Clock should be displaying each second as one minute. (60 times mode).

NOTE:

The selection AFC/CLOCK TEST mode intends to check the operation of the clock, with check counting operating as 60 times mode.

2-7-5 Picture Mode

Preparation

- (1) Receive color bar signal.
- (2) Press MENU key, and select VIDEO menu
- (3) Set to CONTRAST mode.

Checking Procedure

- (1) Check that Contrast is changed by pressing control \blacktriangleleft , \triangleright buttons.

Preparation

- (4) Set to BRIGHTNESS mode.

Checking Procedure

- (2) Check that Brightness is changed by pressing control \blacktriangleleft , \triangleright buttons.

Preparation

- (5) Set to COLOR mode.

Checking Procedure

- (3) Check that Color is changed by pressing control \blacktriangleleft , \triangleright buttons.

Preparation

- (6) Set to TINT mode.

Checking Procedure

- (4) Check that Tint is changed by pressing control \blacktriangleleft , \triangleright buttons.

Preparation

- (7) Set to SHARPNESS mode.

Checking Procedure

- (5) Check that Sharpness is changed by pressing control \blacktriangleleft , \triangleright buttons.

Preparation

- (8) Set to RESET mode.

Checking Procedure

- (6) Check that all picture settings return to delivery settings by pressing \blacktriangleright button.

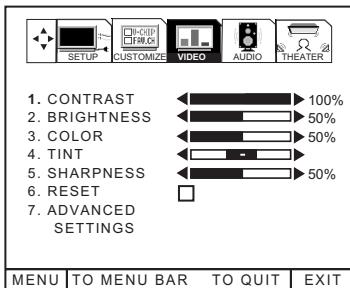

Preparation

- (9) Set to COLOR TEMPERATURE mode, (VIDEO, ADVANCED SETTINGS).

Checking Procedure

- (7) Check that WHITE CONTROL is changed by pressing \blacktriangleright button.

VIDEO MENU

2-7-6 Sound Mode

Preparation

- (1) Press MENU key, and select AUDIO menu.
- (2) Set to BASS mode.

Checking Procedure

- (1) Check that BASS is changed by pressing control \blacktriangleleft , \triangleright buttons.

Preparation

- (3) Set to TREBLE mode.

Checking Procedure

- (2) Check that TREBLE is changed by pressing control \blacktriangleleft , \triangleright buttons.

Preparation

- (4) Set to BALANCE mode.

Checking Procedure

- (3) Check that BALANCE is changed by pressing control \blacktriangleleft , \triangleright buttons.

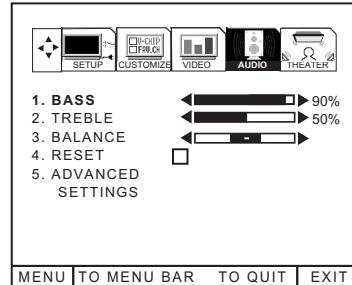

Preparation

- (5) Set to RESET mode.

Checking Procedure

- (4) Check that all sound setting modes return to delivery settings by pressing \blacktriangleright button.

AUDIO MENU

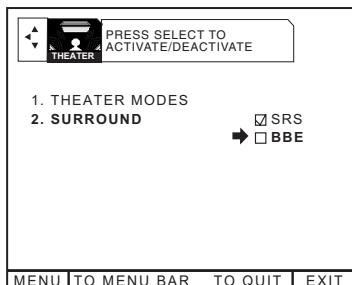

Preparation

- (6) a. Input stereo sound signal to VIDEO:1 terminals, and set "VIDEO:1" by Input button.
b. Set to SURROUND menu (THEATER menu).

Checking Procedure

- (5) Check that sound becomes louder when set to on mode by \blacktriangleup , \blacktriangledown buttons.

THEATER MENU

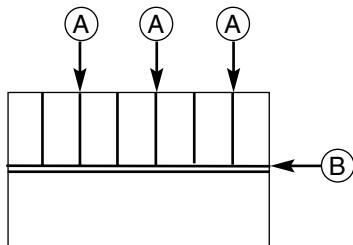

2-8 Comb filter operation check

Preparation

- (1) Receive the color bar signal at the regular tuning point.
- (2) Set the CONTRAST control to MAX and the other VIDEO controls to center.

Checking procedure

- (1) Check that between the color bars there are no line dots every second color bar as shown in the drawing.

Check (A) and (B) line dots.

LINE	DOT
(A)	NONE
(B)	NONE

2-9 AUDIO OPERATION CHECK

2-9-1 TONE CONTROL OPERATION CHECK

Preparation

- (1) Input an audio signal of 250Hz and 3KHz in order with level of 150mVrms to the L/mono audio input.
- (2) Set the Volume to around the center.
- (3) Set SRS SURROUND to OFF.
- (4) Set LOUDNESS to OFF.
- (5) Set INTERNAL SPEAKER to ON.

Checking Procedure

- (1) Select BASS mode and check that the audio output level of the speakers changes to emphasized or suppressed when adjusted to max. or min. of the adjustment mode.
- (2) Select TREBLE mode and check that the audio output level of the speakers changes by emphasized or suppressed when adjust to max. or min. of the adjustment mode.
- (3) Select BALANCE mode and check that the audio output changes right or left when adjusted to right or left of the adjustment mode.

2-9-2 PERFECT VOL. OPERATION CHECK

Preparation

- (1) Set PERFECT VOL. mode to on.
- (2) Set the Volume to around the center.
- (3) Set to SURROUND OFF.
- (4) Set INTERNAL SPEAKER to ON.

Checking Procedure

- (1) Input 100mVrms, 200mVrms, 300mVrms and 400mVrms of 1KHz audio signal to VIDEO:1 L/Mono terminal.
- (2) Check that same level sound is output from SP when 200mVrms, 300mVrms and 400mVrms of 1KHz sound signal is input.

2-9-3 SRS SURROUND OPERATION CHECK

Preparation

- (1) Set the Master Volume to 40 step.
- (2) Set the BALANCE to the center.
- (3) Set the BASS and TREBLE to the center.
- (4) Set LOUDNESS to OFF.
- (5) Set PERFECT VOLUME to OFF.
- (6) Set BBE to OFF.
- (7) Input the audio signal of 400Hz with level of 1Vpp to the VIDEO:1 R audio input and no signal to the L audio input.

Checking Procedure

Check the following waveform at the HiFi out.

Output	SRS	
	ON	OFF
HiFi L out	4.2±0.5Vpp 	No signal
HiFi R out	5.0±0.5Vpp 	1.8±0.5Vpp

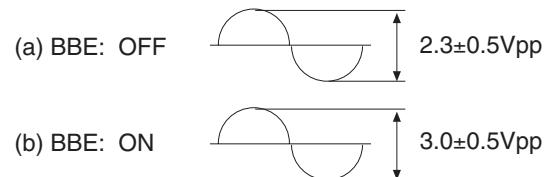

2-9-4 BBE OPERATION CHECK

Preparation

- (1) Set the Master Volume to 40 step.
- (2) Set the BALANCE to the center.
- (3) Set the BASS and TREBLE to the center.
- (4) Set LOUDNESS to OFF.
- (5) Set PERFECT VOLUME to OFF.
- (6) Set SRS to OFF.
- (7) Input the audio signal of 100Hz with level of 1Vpp to the VIDEO:1 L audio input and no signal to the R audio input.

Checking Procedure

Check the following waveform at the HiFi out.

IV. DEFLECTION CIRCUIT PICTURE ADJUSTMENT OPERATION CHECK

1. HIGH VOLTAGE LIMITER CIRCUIT OPERATION CHECK AND OVER VOLTAGE PROTECTION CIRCUIT OPERATION CHECK.

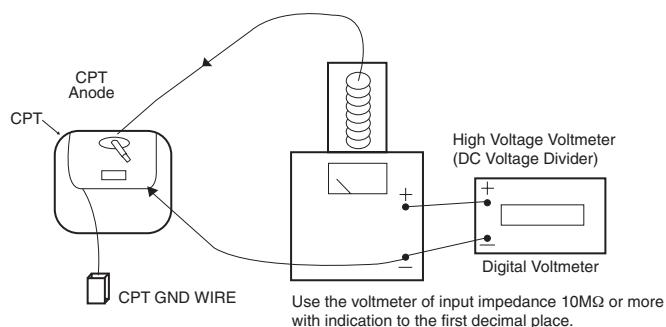

Preparation

- (1) Connect a high voltage voltmeter between CPT anode terminal (Anode cap side) and the ground as below.
- (2) Set AC input voltage to $120 \pm 3V$.
- (3) Receive circle pattern and set "BRIGHTNESS" and "CONTRAST" to max.
Adjust Screen VR so that beam current is $I_B \pm 0.1mA$. (The voltage of ABL terminal-C747 both ends should by 12V or less.)

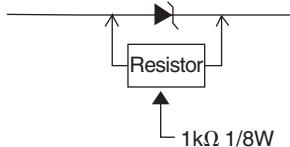

Checking Procedure

- (1) Check that the normal high voltage and +B voltage as below.

CHASSIS	EHT $\pm 1KV$	$I_B \pm 0.1mA$	+B
36UDX10S	$30.0 \pm 1KV$	$1.7 \pm 0.1mA$	$140 \pm 0.3V$
32UDX10S	$29.0 \pm 1KV$	$1.5 \pm 0.1mA$	$140 \pm 0.3V$

- (2) Connect a $1k\Omega 1/8W$ Resistor to both ends of D703 and check that power is turned off.

- (3) Disconnect the AC plug and remove $1k\Omega 1/8W$ Resistor.

2. FBT PROTECTION CIRCUIT OPERATION CHECK

Preparation

- (1) Turn on the power of the set.

Checking Procedure

- (1) Add $100K\Omega$ ($1/16W-1/8W$) resistor between QP02 base and GND and check the operation.
- (2) After checking, remove AC PLUG and $100K\Omega$ jig resistor to return the set to the original state.

After about 15 seconds, or discharging from CP22, turn on the power again, and check that the set operates normally.

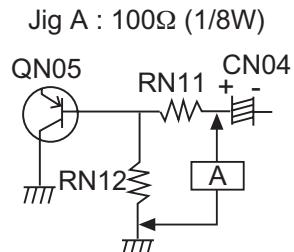

3. H.V. PROTECTION OPERATION CHECK

Preparation

- (1) Connect P.W.B. to adjusted TV set.
- (2) Receive Hitachi Circle pattern.

Checking Procedure

- (1) Connect the Jig A shown as follows, and check that the picture disappears.

4. DEFLECTION CIRCUIT ADJUSTMENT

4-1 HIGH VOLTAGE ADJUSTMENT

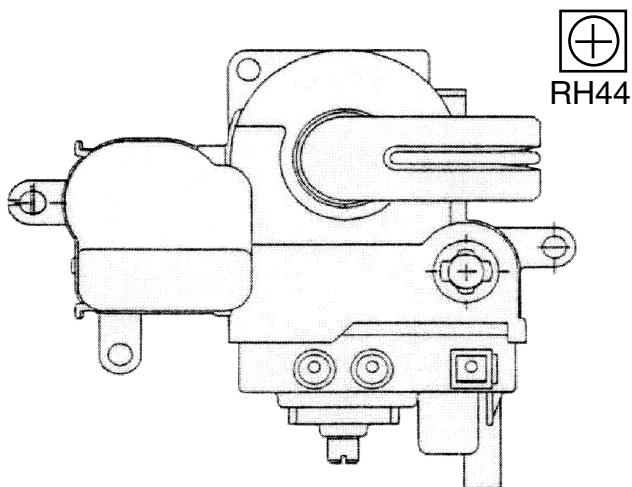

Preparation

- (1) Connect High Voltage meter to FBT High Voltage output, connect GND of High Voltage meter to CRT GND or FBT GND.
- (2) Check that High Voltage adjustment VR (RH44) is set to its mechanical center. This VR is located behind the FBT.
- (3) Receive circle pattern signal.
- (4) VIDEO controls should be reset.

Checking Procedure

- (1) Adjustment High Voltage to following spec, by turning VR (RH44) slowly.
ADJ. SPEC = 30.0KV +/0.5KV (MF1Z)
 29.0KV +/0.5KV (MF1Y)
- (2) After adjustment, fix VR (RH44) with Silicone glue. (KE4ORTV).

High Voltage Adjustment VR.

DEFLECTION P.W.B.

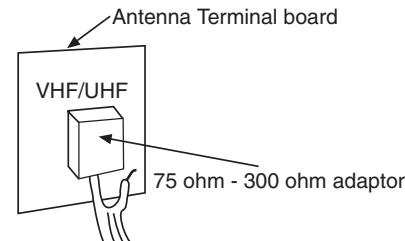

5. WEAK ELECTRIC FIELD CHECK

Preparation

- (1) Connect one side of the 300 ohm feeder to 75 ohm ~ 300 ohm antenna adapter. Connect the antenna adapter to the VHF antenna terminal board as shown below.
- (2) Turn to no signal condition.

Checking Procedure

- (1) Check that the phenomena such as oscillation and abnormal beat, etc. do not occur in all the channel.

V. REMO-CON OPERATION CHECK

1. DIRECT CHANNEL SELECTION

Checking Procedure

- (1) Input 2 or 3 digits of channel number with the buttons of the Remo-con "0-9." Check that the input number and the on-screen display number are the same. (At 100CH selection, press "1" and after 2 seconds, press "0" two times.)

1 — → 1 — —

After
2 seconds

2. LST-CH (LAST CHANNEL RECALL)

Checking Procedure

- (1) Check that the set receiver alternates between the channel which is being received and the channel which was previously received with each press of the "LST-CH" button of the Remo-con.

3. MUTE

Checking Procedure

- (1) Check that the sound alternates between SOFT MUTE, MUTE and MUTE OFF by every pressing of "MUTE" button on the Remo-con. At this time, check the MUTE indication:
MUTE off Yellow
SOFT MUTE Magenta
MUTE Magenta

- (2) Check that sound level goes to 1/2 level at SOFT MUTE.
- (3) Check that sound level goes to 0 at MUTE mode.

4. RECALL

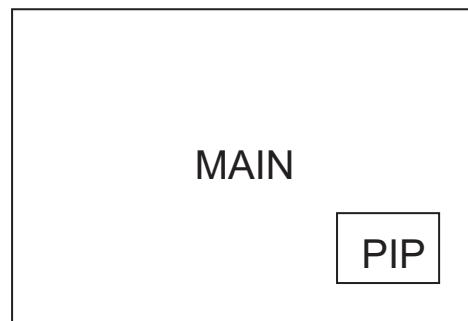

Checking Procedure

- (1) Check that on-screen channel no. indication appears by pressing the "RECALL" button of the Remo-con.

5. PIP

Checking Procedure

- (1) Press PIP button on the remote control. Check that there is a small window that appears on the main picture.

6. MOVE

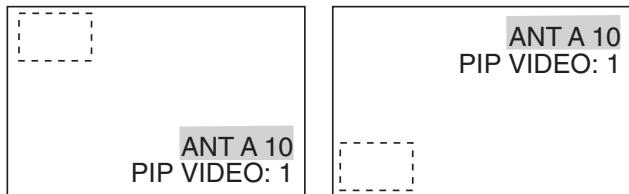

Preparation

- (1) Press "PIP" button to set to PinP mode.

Checking Procedure

- (1) Check that with each press of the "MOVE" button on Remo-con, sub-picture moves counterclockwise.

Note: When sub-picture is in the upper left of the screen, the channel number of main picture comes to the lower right, as shown below.

7. SWAP

Preparation

- (1) Press "PIP" button to set to PinP mode.

Checking Procedure

- (1) Check that with each press of the "SWAP" button, the contents of main picture and sub-picture are exchanged.

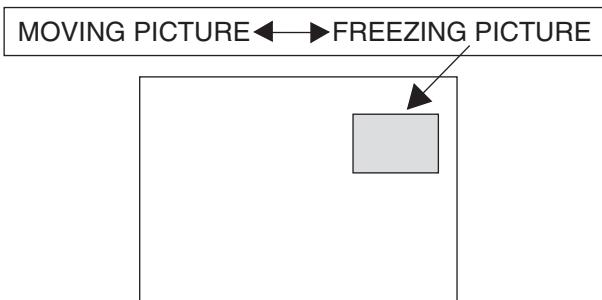

8. FREEZE

Preparation

- (1) Connect signal to ANT A and video. (One or both of the pictures should be moving picture.)
- (2) Press "PIP" button to set PinP mode.
- (3) Sub-picture should be moving picture.

Checking Procedure

- (1) Check that with each press of the "FREEZE" button, sub-picture alternates between moving picture and freezing picture.

- (2) Press "PIP" button to make sub-picture disappear.

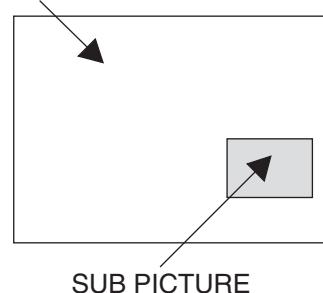

Preparation

- (1) Connect signals to ANT A and Video:1 Input. Both signals should be moving picture.
- (2) Set PinP to off.

Checking Procedure

- (1) Check that freezing picture of main screen appears as a sub-picture by pressing "FREEZE" button on the Remo-con.
- (2) Check it also in the TV and Video modes.
- (3) Check that the freezed sub-picture disappears by pressing "PIP" button.
- (4) Check that the freezed sub-picture turns to normal PinP sub-picture by pressing FREEZE button.

MOVING PICTURE

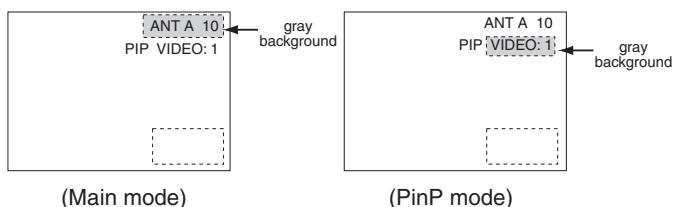

9. PINP CH

Preparation

- (1) Connect the signal to ANT A and VIDEO: 1.
- (2) Press "PIP" button to set PinP mode.

Checking Procedure

- (1) Check that OSD changes as follows by pressing "PIP CH" button.

(Main mode)

(PinP mode)

- (2) Set PIP CH to PinP mode.
- (3) Check that PinP sub-picture changes by channel ▲,▼, and "INPUT" key and receives normal picture.

VI. FACTORY RESETTING

After all of the adjustments of main chassis are finished, perform FACTORY RESET.

- (1) Enter Adjustment Mode by the method described in sub-items 1-1 and 1-2 from item I. "Main chassis adjustment. Adjustment procedure start up."
- (2) From the first menu in Adjustment Mode, select FACT RESET adjustment code.
- (3) Activate FACT RESET by pressing "Right" cursor key once.
- (4) Check that the receiving channel goes to CH03. Unit is set to factory settings.

VII. FINAL ASSEMBLY ADJUSTMENT/COMMON SERVICE ADJUSTMENT

1. PURITY/CONVERGENCE CHECK

The CPT A90LPY30X50 and A80LJF30X50 are ITC type.

Preparation

PURITY CHECK

- (1) The magnetic field in artificial magnetic field should follow the magnetic field according to the destination, see Table 2, and the set should face North.

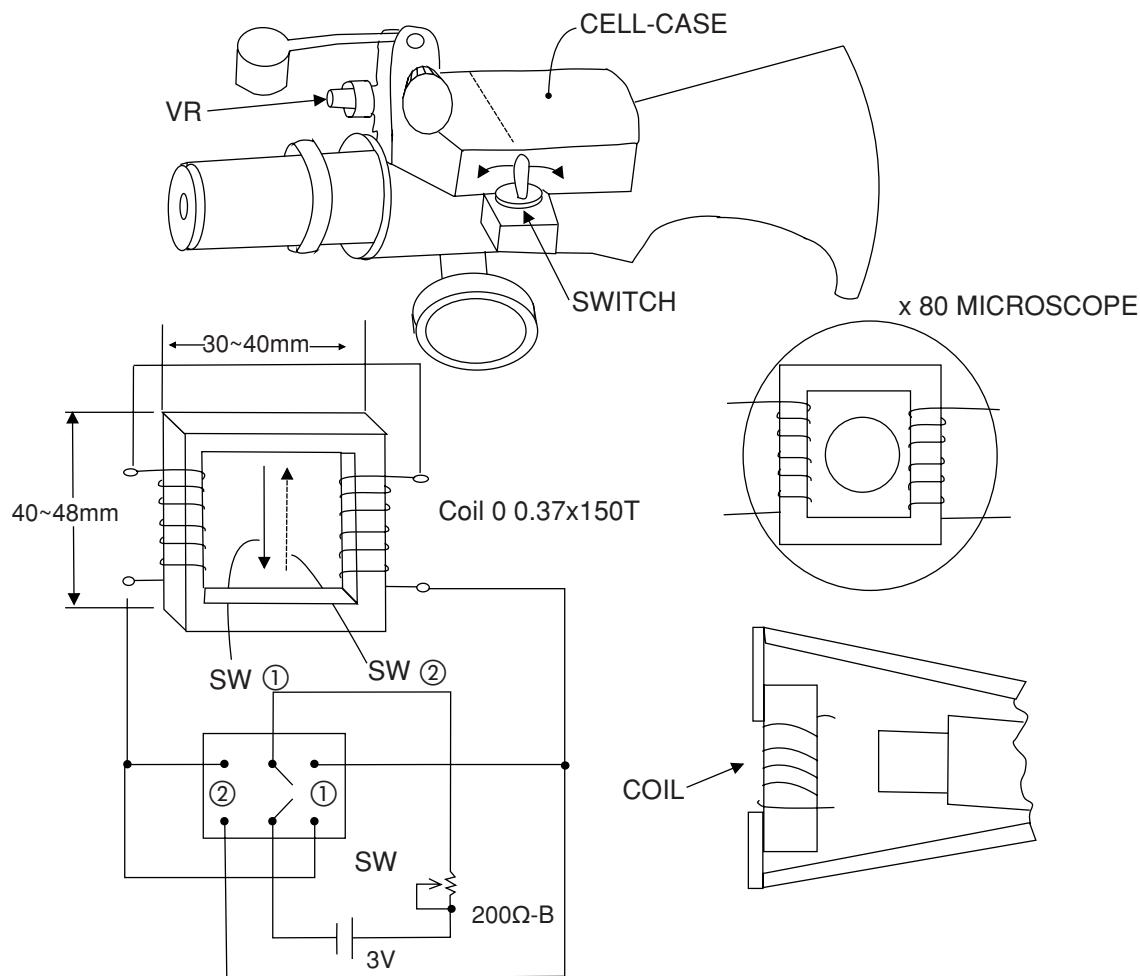

Table 2: Artificial magnetic field setting list classified by destination.

DESTINATION	Vertical Field	Horizontal Field
USA	0.45 G	0.3 G
CANADA	0.54 G	0.15 G
UNIVERSAL	0.35 G	0.3 G

Checking Procedure

- (1) After degaussing in each direction, check these items visually and with a microscope.
- (a) No problem in white unevenness.
 - (b) Each single color must not hit any other colors.
 - (c) If white or any single color is defective, apply a magnet(s) on CPT for correction. If any magnet is applied, check it after degaussing.

THE MICROSCOPE

Fix coil to CRT side of microscope. Set it upside down and measure it. Check that beam moves to the right and left equally in quantity. Be careful at assembly that core does not tilt because upward (downward) magnetic field by coil moves the beam to the right (left) or type MS-50X microscope of KANSAI DENKI.

Criteria with microscope

There should be no miss landing at positions 2, 4, 8 and 10. Green beam should be at center of the green phosphor at position C. (Refer to the miss landing criteria.)

- (2) Turn over the direction of CPT axis direction magnetic field of the next artificial magnetic field and after degaussing it from outside, check the purity in each color of R, G, B visually. Turn the screen to white and check the landing at the screen position shown in fig. 1. The positions of miss landing criteria with a microscope should be 2, 4, 8 and 10 (Figure 1).

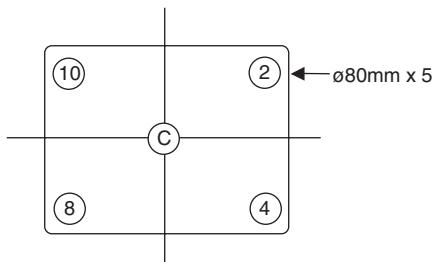

FIGURE 1

Miss landing criteria

The following conditions are defined as miss landing. Each color beams shines on the phosphor of the applied color and there are phosphor parts which are not luminous (shaded parts in the right figure) between the luminous parts and black matrix. Or, each color beam shines on the phosphor of not applied color.

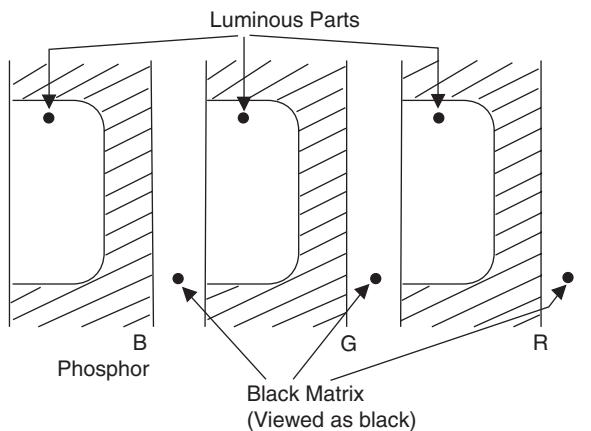

FIGURE 2 Enlarged view of screen with microscope

- (3) To improve the miss landing mentioned above, it's acceptable to stick the permanent magnets to CPT funnel (Figures 3 and 4).

Usage

Apply a silicone rubber KE-40 WRTV to the permanent magnet shown in the Figure, adhere it to the CPT funnel and then fix it with adhesive tape (Permacel P212).

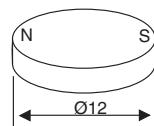

FIGURE 3

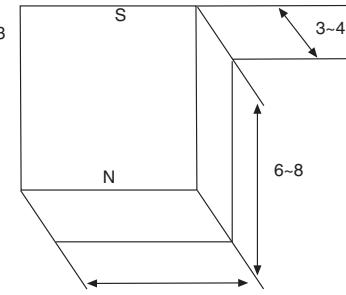

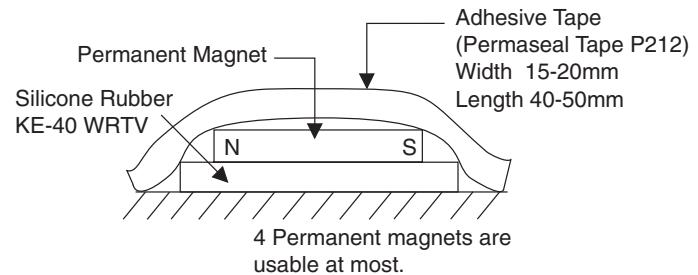

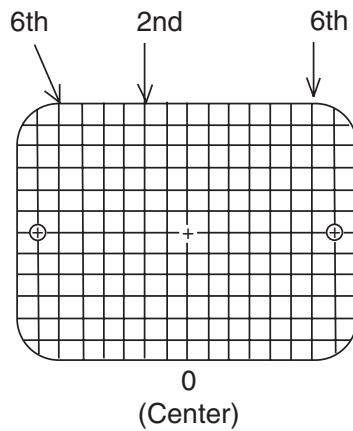

FIGURE 4

- (4) Final purity criteria should satisfy the miss landing criteria.
- (5) When delivering the sets, set CPT axis direction magnetic field to 0 Gauss and degauss it from outside.

2. FOCUS ADJUSTMENT

NO.	MODEL	CPT	CONDITION	Focus VR setting position
1	36UDX10S	A90LPY30X50 (HED-US)	<ul style="list-style-type: none"> • Receive the cross-hatch signal • Contrast control: Maximum • Sharpness control: Center • Brightness control: Where the background is set 	<p>Turn the Focus VR gradually clockwise from the full counterclockwise position. Then set it to the point where the focus of 7th horizontal line from the screen center becomes best.</p>
2	32UDX10S	A80LJF30X50 (HED-US)	<ul style="list-style-type: none"> • Receive the cross-hatch signal • Contrast control: Maximum • Sharpness control: Center • Brightness control: Where the background is set 	<p>Turn the Focus VR gradually clockwise from the full counterclockwise position. Then set it to the point where the focus of 6th horizontal line from the screen center becomes best.</p>

VIII. DEFLECTION CIRCUIT PICTURE ADJUSTMENT

1. Deflection Circuit Picture Adjustment

1.1 HORIZONTAL POSITION ADJUSTMENT

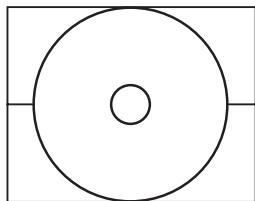

Adjustment Preparation

- (1) The screen face of the set should be turned to the East or West.
- (2) VIDEO control should be set to Factory Preset Condition.

Progressive Mode

Adjustment Procedure

- (1) Receive circle pattern signal.
- (2) Go to I2C ADJ. mode by pressing "POWER" and "INPUT" keys on the front panel at the same time and hold for more than 3 seconds, when the CTV set is turned off.
- (3) Choose H. POSI item using R/C up/down cursor key or channel keys on front panel.

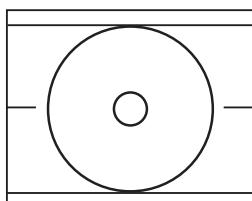

Spec: Balance Left/Right side display position.
H. size marker = 1.0 ~ 2.0

- (4) Adjust HOR. POSITION as follows, using R/C left/right cursor keys or volume keys on front panel.

HD MODE

Adjustment Procedure

- (1) Input 1080i (fH=33.75KHz) component circle pattern signal to VIDEO 2.
- (2) Select Video:2 signal with front panel "Input/Exit" key or R/C "Input" key.
- (3) Turn off the set and go to I2C ADJ. mode by pressing "POWER" and "INPUT" keys on the front panel at the same time and hold for more than 3 seconds. Choose H. POSI item using R/C up/down cursor key or channel keys on front panel.

Spec: Balance Left/Right side display position
H. size marker = 9.5 ~ 11

- (4) Adjust HOR. POSITION as follows, using R/C left/right cursor keys or volume keys on front panel.

1.2. HORIZONTAL SIZE ADJUSTMENT

PROGRESSIVE MODE

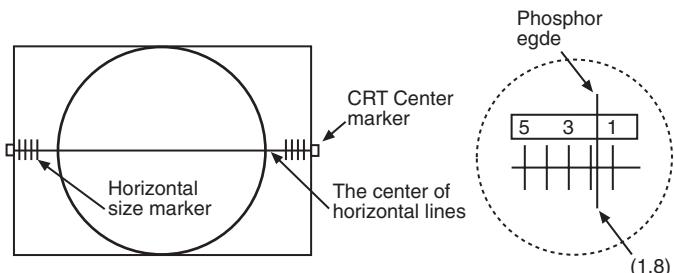

Adjustment Preparation

- (1) Receive circle pattern signal.
CONTRAST: MAX.
BRIGHTNESS: CENTER.

Adjustment Procedure

- (1) Adjust horizontal size with adjustment code PICWID so that CRT center marker is completely visible, with a perfect circumference shape.

- (2) Adjust horizontal size with adjustment code PICWID so that horizontal size marker of circle pattern becomes 1.8 ± 0.4 .

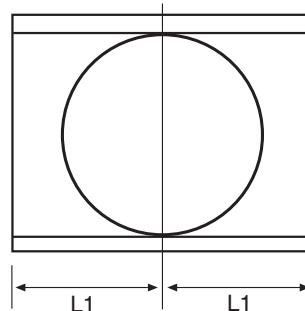

HD MODE

Adjustment Preparation

- (1) Input 1080i (fH=33.75KHz) component circle pattern signal to VIDEO 2.
CONTRAST: MAX.
BRIGHTNESS: CENTER.

Adjustment Procedure

- (1) Adjust horizontal size with adjustment code PICWID so that CRT centermarker is completely visible with perfectly round shape. Adjust horizontal size and position with adjustment code PICWID and H POSI as shown below.

L1: Adjust horizontal size so that there are 10 ± 0.5 squares between horizontal center and phosphor edge. Adjust for a perfectly round shape center circle.

1.3. VERTICAL SIZE ADJUSTMENT

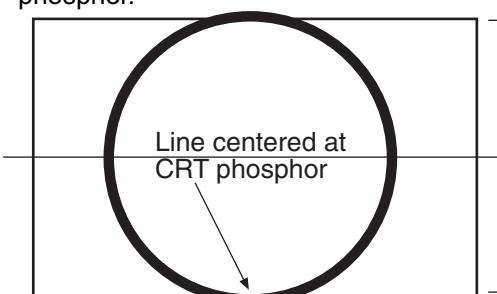

PROGRESSIVE MODE

Adjustment Preparation

- (1) Receive circle pattern signal.
CONTRAST: MAX.
BRIGHTNESS: CENTER.

Adjustment Procedure

- (1) Adjust vertical size with adjustment code PICHEI, so that line circle is centered to CRT phosphor.

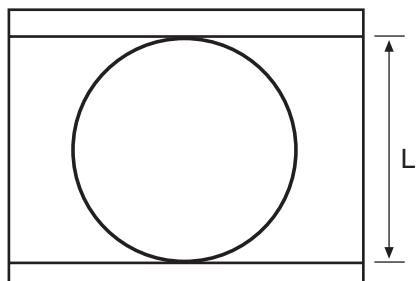

HD MODE

Adjustment Preparation

- (1) Input 1080i ($fH=33.75\text{KHz}$) component circle pattern signal to VIDEO 2 Y-P_BP_R input.
Contrast: MAX.
Brightness : CENTER.

Adjustment Procedure

- (1) Adjust vertical size in HD mode with adjustment code PICHEI so as to meet specification.

MODEL	L
36UDX10S	425±3
32UDX10S	390±3

L=mm

1.4 SIDE PIN

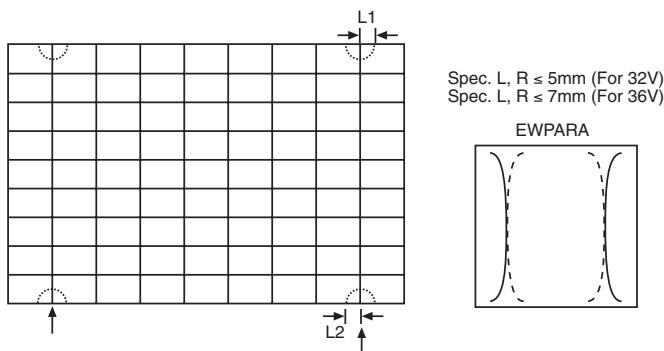

PROGRESSIVE MODE

Adjustment Preparation

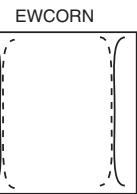

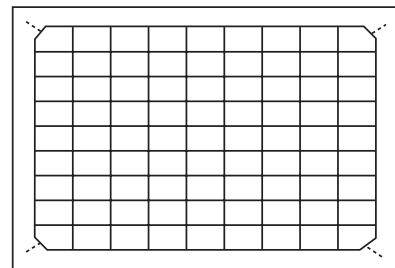

- (1) Vertical size and position adjustment should be finished in advance.
- (2) Receive cross-hatch pattern signal.
Contrast: MAX
Brightness: CENTER

Adjustment Procedure

- (1) Adjust vertical pincushion with adjustment code EWPARA so that outer vertical line of cross-hatch, shown by arrow mark, becomes straight. Adjust the following items if vertical line does not become straight with EWPARA shown below.

- (2) Corner distortion adjustment.
Adjust the corners, if vertical line does not become straight in the corner use EWCORN as shown below.

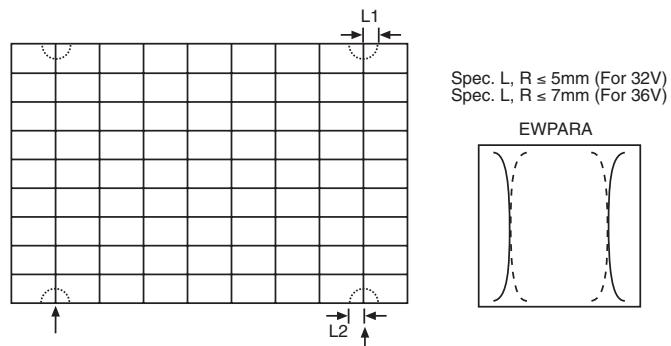

HD MODE

Adjustment Preparation

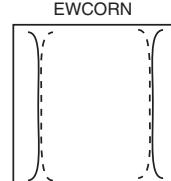

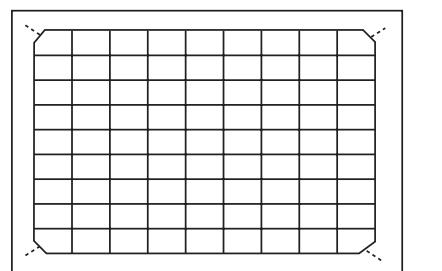

- (1) Vertical size and position adjustment should be finished in advance.
- (2) Receive a 1080i cross-hatch pattern.
Contrast: MAX.
Brightness: CENTER

Adjustment Procedure

- (1) Adjust vertical pincushion with adjustment code EWPARA so that outer vertical line of cross-hatch, shown by arrow mark, becomes straight. Adjust the following items if vertical line does not become straight with EWPARA shown below.
- (2) Corner distortion adjustment.

Adjust the corners if vertical line does not become straight in the corner use EWCORN as shown below.

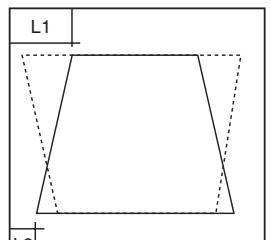

1.5 TRAPEZOID ADJ. HD AND PROGRESSIVE Adjustment Preparation

- (1) Progressive Mode
Receive Cross-hatch pattern.
Contrast: MAX
Brightness: CENTER
- (2) HD Mode
Receive 1080i cross-hatch pattern signal.
Contrast: MAX
Brightness: CENTER

Adjustment Procedure

- (1) For Trapezoid adjustment please select the EWTRAP on the service code. Set the balance of the picture on the TOP and BOTTOM sides of the picture

ADJUSTMENT CODE: EWTRAP

MODEL	L1-L2
36UDX10S	≤ 10
32UDX10S	≤ 10

IX. WHITE BALANCE ADJUSTMENT

1. WHITE BALANCE ADJUSTMENT

Adjustment Preparation

- (1) 20 minute heat-run is necessary before adjustment.
- (2) Exterior light over surface of CRT should be less than 20 lux.
- (3) Receive white raster of NTSC signal.
- (4) Enter SERVICE option (first page) from Adjustment Mode menu, select any option from R/G/B-CUT OFF with the use of the cursor keys \blacktriangle , \blacktriangledown , \blackleftarrow , \blackrightarrow , and stop vertical deflection by pressing menu key.
- (5) A slight horizontal line must appear at the vertical center of the image area.

Adjustment Procedure

- (1) Turn the screen VR, in the FBT, fully counter-clockwise to make the horizontal line disappear.
- (2) Turn the screen VR clockwise gradually until the first color appears (red, green or blue); it will be identified as color "A", change color "A" no more.
- (3) Exit vertical deflection stop mode by pressing menu. Using the cursor keys, \blacktriangle , \blacktriangledown , \blackleftarrow , \blackrightarrow , select the colors to be adjusted, R-CUT OFF, G-CUT OFF, B-CUT OFF, except color "A".
- (4) Press menu key to stop vertical deflection and adjust selected colors with \blacktriangle , \blacktriangledown , cursor key in order to make the horizontal line become white.
- (5) Turn screen VR gradually counterclockwise until horizontal line almost disappears.
- (6) Release vertical deflection stop with menu key.

- (7) In the user menu, set contrast at max and brightness at 50%.
- (8) Set High Contrast white balance level code parameters: G DRV(C) and B DRV(C) from the Adjust Mode menu (TA1298 page).
- (9) Set contrast level to minimum and check Low Contrast white balance level by directly observing the picture without using a mirror.
- (10) When the low contrast white balance is not obtained, use SERVICE option to adjust R/G/B-CUT OFF (except color "A") and return to item (4).
- (11) Check that the white balance color temperature is approximately:

	Coordinates	Temperature
Cool	x=0.278,y=0.280	T=10,800K
Warm		T=7,600K

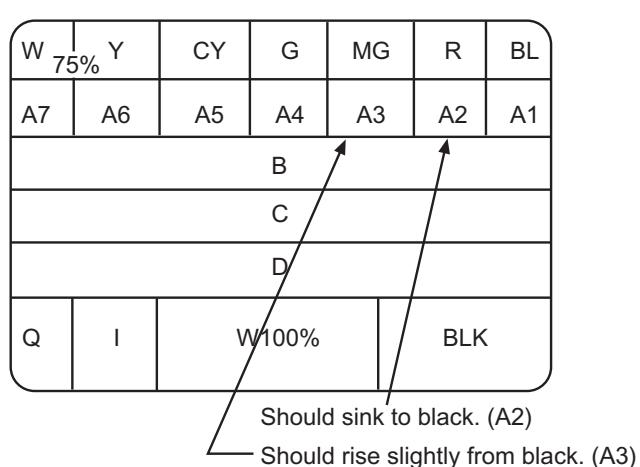

2. SUB-BRIGHTNESS ADJUSTMENT

Adjustment Preparation

- (1) Start adjustment 20 minutes or more after the power is turned On.
- (2) Receive the color bar signal.
- (3) The vertical incident illumination on the screen should be 20 lux or less.

Adjustment Procedure

- (1) Go to "Sub BRT" adj. mode following I, "Main Chassis adjustment, ADjustment procedure start up."
 - (2) Adjust Sub brightness to spec., shown below, using \blacktriangle , \blacktriangledown keys.
- Remarks: *Directly observe the CRT screen by eye, without using a mirror.

NOTE: When selecting SUB-BRT mode, the micro controller sets the CONTRAST and COLOR to MIN> automatically, but make sure that the other conditions are center.

	Sink to black	Slightly from black
36UDX10S	A2	A3
32UDX10S	A2	A3

3. SUB PICTURE ADJUSTMENT

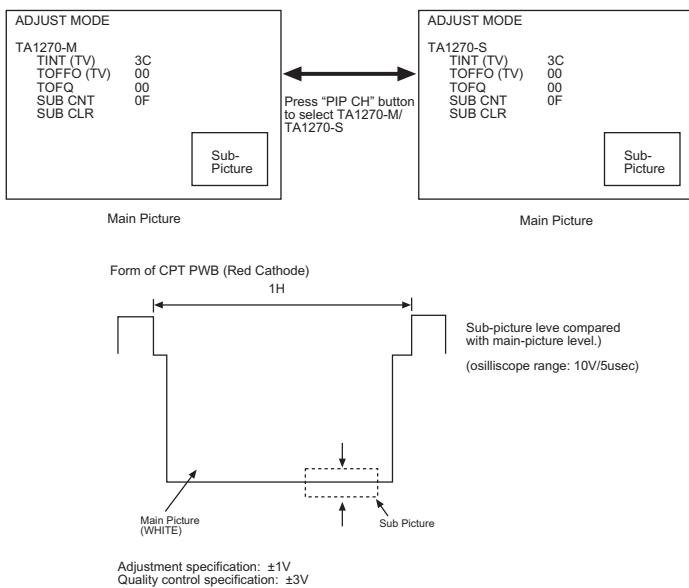

Sub picture signal amplitude adjustment

Adjustment Preparation

- (1) Sub-brightness adjustment should be finished.
- (2) Start adjustment about 20 minutes after the power switch is turned on.
- (3) Condition should be set as follows:
Contrast: MAX
Brightness: CENTER
- (4) Press PIP button of R/C unit.
- (5) The previous selected PinP will appear on the screen.
- (6) Select SINGLE mode and receive NTSC white signal (amplitude 2.0Vp-p open), main-picture and Sub-picture (Do not use component signal).
- (7) Connected prove on the R-K on the CPT PWB to check sub-picture amplitude.

Adjustment Procedure

- (1) Display PIP SINGLE picture.
- (2) Go into I²C service code and press MENU button until TA1270-M is displayed on screen.
- (3) Press "PIP CH" button of R/C. "TA1270-M" changes to "TA1270-S".
- (4) Observe R-K on the CPT P.W.B. and change the "TA1270-S SUB CNT" I²C data so that the amplitude of the sub-picture is the same level as that of the main picture shown below.

X. MATCHING CHECK WITH OTHER EQUIPMENT

Checking Preparation

- (1) Input video signals to VIDEO: 1-3 input terminals. Signal condition 100% white signal 1 $\pm 0.2\text{Vp-p}$ 75Ω terminations.
- (2) Input audio signals to AUDIO: 1-3 input input terminals. Signal condition $435 \pm 20\text{mVrms}$. VTR or Tuner or equivalent
- (3) Connect the monitor TV to Output terminal.
- (4) Input Y-C separate terminals to S-VIDEO input terminal. Signal condition: Y: 1VPP, C: 0.286Vpp 75Ω termination.
- (5) INPUT COMPONENT VIDEO Signal to COMPONENT input terminal. Signal condition: Y: 1VPP Cb/Pb, Cr/Pr: 0.7Vpp 75Ω termination.
- (6) Connect the AUDIO INPUT TERMINALS of the monitor TV to AUDIO TO HI-FI output terminals.

Checking Procedure

- (1) Each time the input selection of the remote control transmitter is pressed, the corresponding input signal should be received.
- (2) Check that the picture and sound are normal when the external signals are received.

Remarks

- (1) The 100% white of TV signal should be almost the same brightness as the 1Vp-p (75Ω termination) external Video input signal.
- (2) For the audio signal 100% modulation (25KHz div) of the TV signal should be almost the same level as the 435Vrms external Audio signal.
- (3) S and Component input have priority.

Checking Procedure

- (3) Check that the reception of the monitor TV connected to Output terminal is also switched when Item (1) is checked.

Remark

- (1) The signals from the Output terminals are the same as those of the picture and sound of the TV set.

Checking Procedure

- (4) When the "AUDIO TO HI-FI" plug connected to Audio R terminal is pulled out with the external Signal Input sound from both left and right speakers should be normal (L monaural check). When the "AUDIO TO HI-FI" plug is connected only to R terminal, check that the sound is output only from the right speaker. (No sound should be output from the left speaker.)

Remark

- (1) The audio input terminals are switched between stereo and monaural by switching the "Audio Input Terminals" jacks.
- When the "Audio Input Terminals" plugs are connected to both L and R: Stereo input mode.
 - When the "Audio Input Terminals" plugs are connected only to L: Monaural input mode.

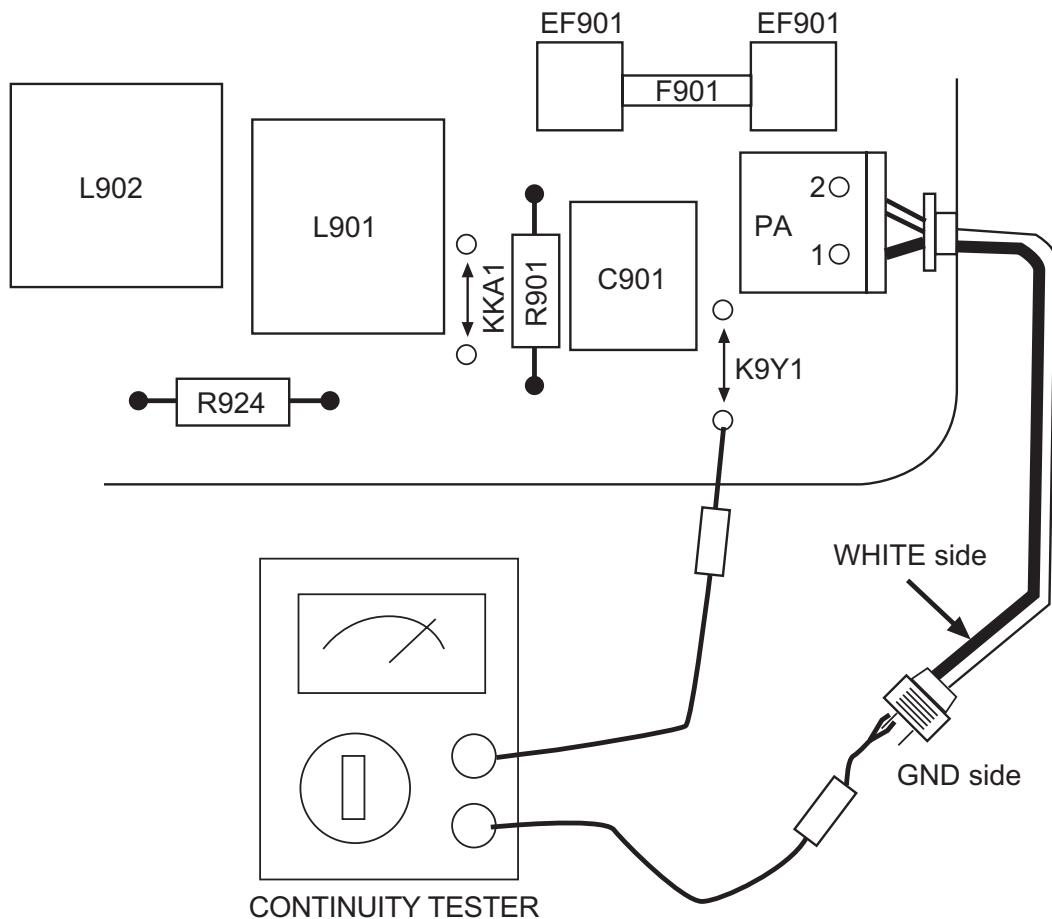

Checking Procedure

- (5) When the Video (S-In) is selected, the picture and sound from the Y/C separated signal should be received. Output signal is composite or S-Video signal, when S-Video input signal is selected.
- (6) The signal controlled from the TV side (Bass, Treble, Balance, Volume, Mute, Surround) should be output from Audio to Hi-Fi output terminal when item (1) is checked.

XI. SAFETY CHECK

1. AC Cord Polarity

This check is based on the UL standard. The GND side (wider blade) of the AC power cord should be connected to K9Y1.

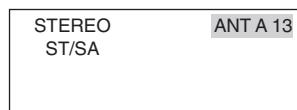

XII. MTS OPERATION CHECK

1. STEREO/SA BROADCAST RECEIVING CHECK

Preparation

- (1) Set the TV set so that a MTS broadcast (STEREO/SAP) can be received.

- (2) Set MTS mode to STEREO or SAP mode.

Note: To select between "STEREO/SAP," display sound setting of MTS mode and Select AUDIO MENU

- (3) Set BALANCE to the center.

Checking Procedure

- (1) When one of the MTS broadcast stereo SAP is received, check that "ST" or "SA" is displayed on the screen.
- (2) Stereo broadcast receiving check
- (a) Select MTS mode and press cursor ▶ button to display "STEREO" on the screen.
 - (b) When only Lch signal is received, Lch sound comes out from the left speaker.
 - (c) When only Rch signal is received, Rch sound comes out from the right speaker.
 - (d) When monaural signal is received, monaural sound comes out from both the right and left speakers.
- (3) SAP broadcast receiving check
- (a) Select MTS mode. Press cursor ▶ button to display "SAP" on screen.
 - (b) SAP signal comes out from both of the right and left speakers.
 - (c) When to SAP signal, the sound on "MAIN" side (refer to (3)) comes out.

Note: When the RECALL button is operated, "STEREO", "ST" or "SA" are shown for approx. 4 sec.

2. MTS MODE CHECK

Preparation

- (1) Set the TV set so that a MTS broadcast (STEREO/SAP) can be received.
- (2) Set BALANCE to the center.

Checking Procedure

- (1) When "MTS MODE" is set to "MONO" mode, check that STEREO indication which has been ON are turned OFF and that monaural sound comes out from the right and left speakers.
- (2) When "MTS MODE" is set to "STEREO" mode, check that the STEREO indication which has been OFF are turned ON and that STEREO and SA sound can be received.

3. STEREO SEPARATION CHECK

Preparation

- (1) Set the set so that a MTS broadcast (STEREO/SA) can be received.
- (2) Make surround "OFF".
- (3) Set MTS MODE to "STEREO."
- (4) Connect AUDIO OUT terminals L and R to an oscilloscope.

Checking Procedure

- (1) When stereo L only signal (or R only signal) is received, check that the output level ratio of Lch and Rch is 15dB or more.

(Example)

When L only is received (100% modulation)

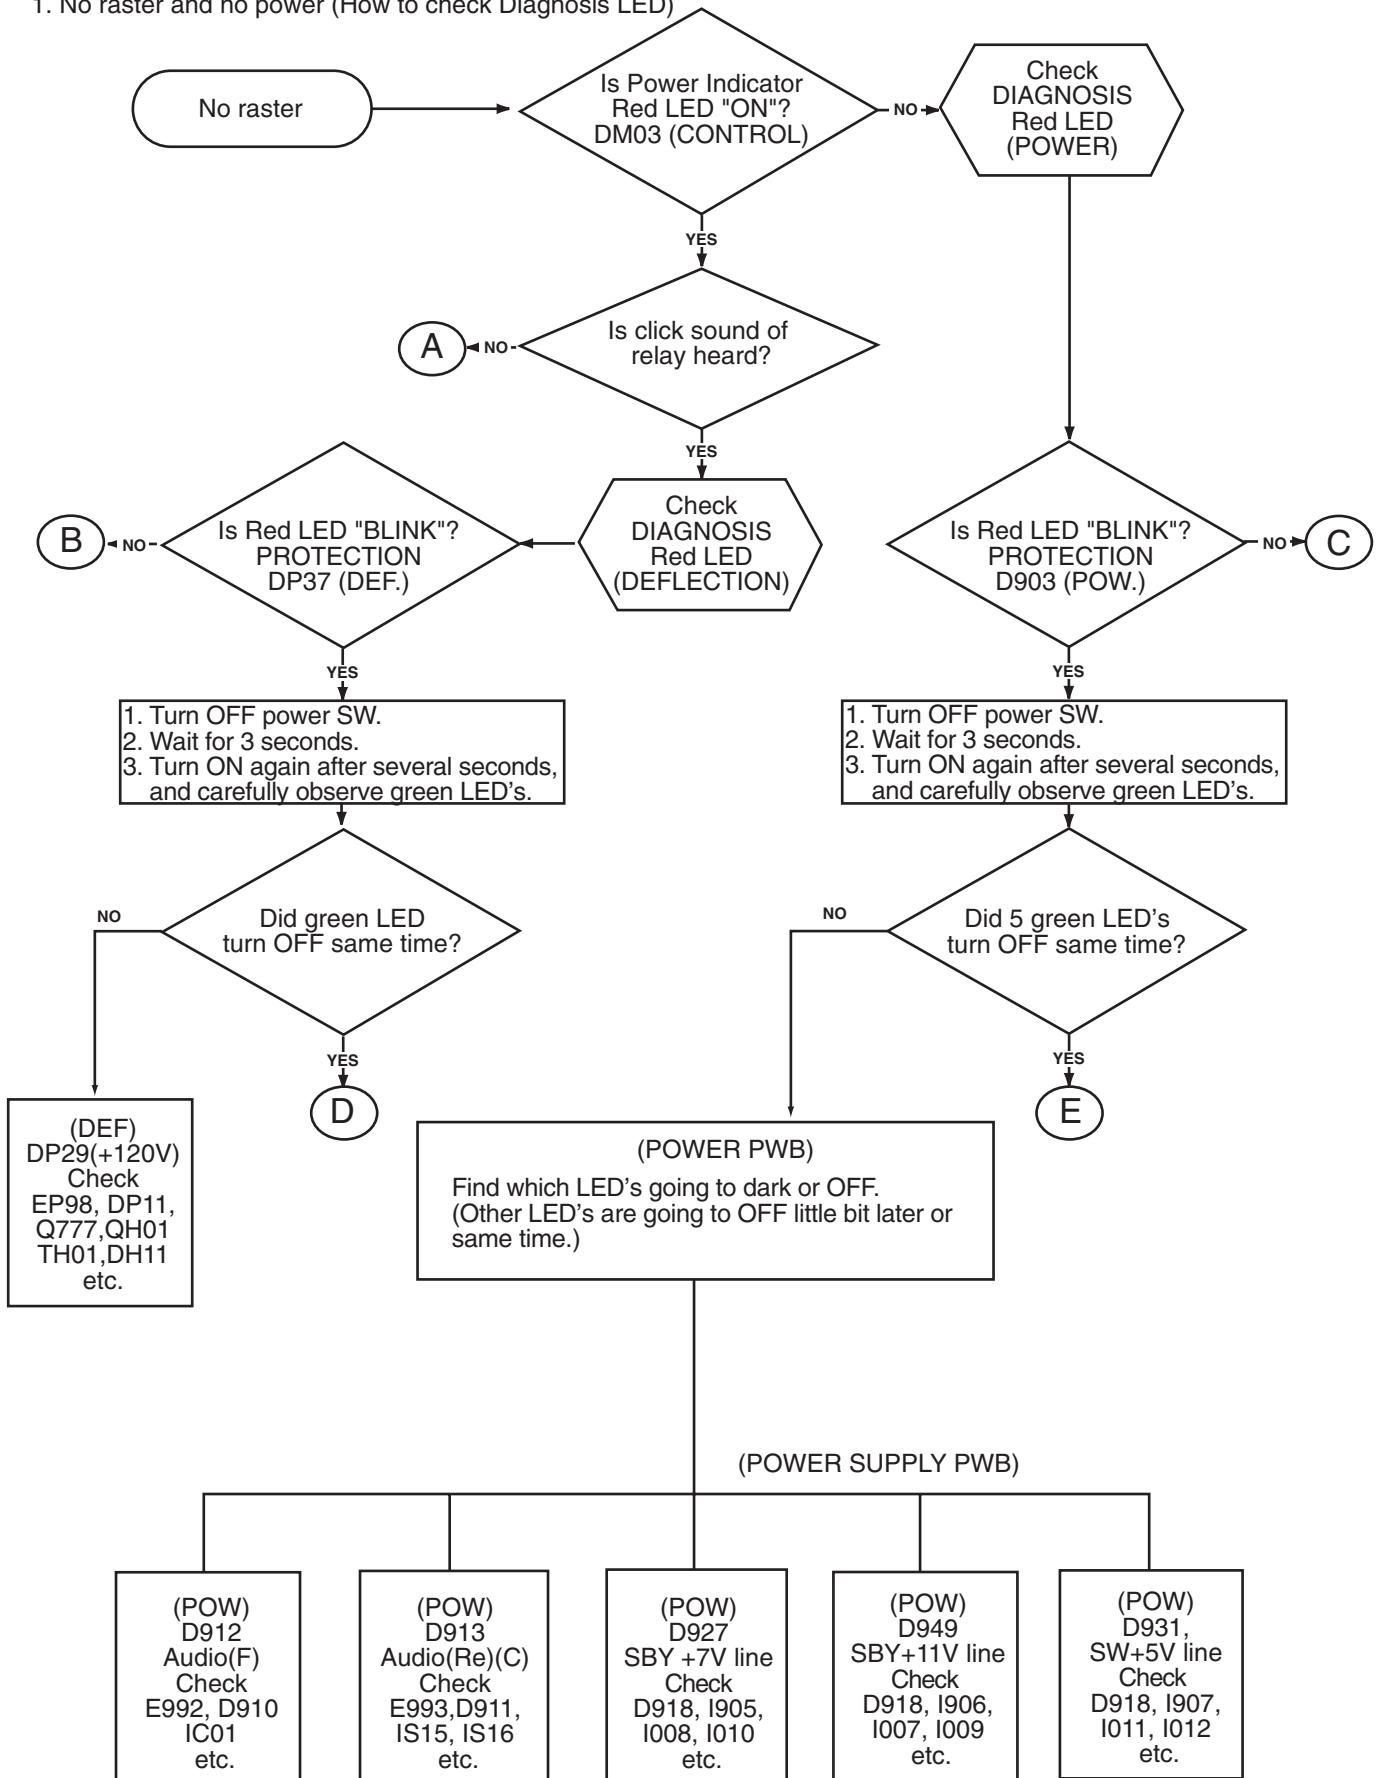

CH	Output Level
L	1.2 Vpp
R	0.21 Vpp or less

(9) I001 Pin 63

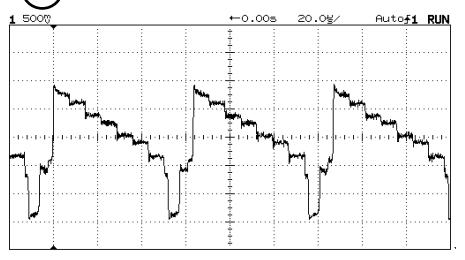

(10) I403 Pin 6

(11) I403 Pin 8

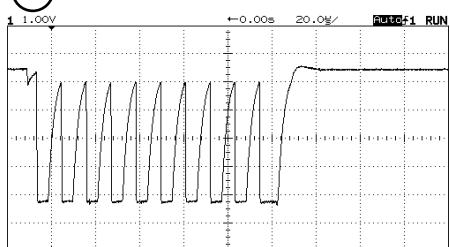

(12) I403 Pin 40

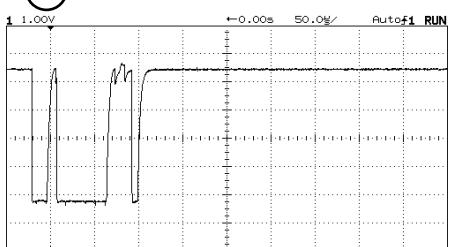

WAVEFORMS AT EACH SECTION

Numbers inside circle correspond to locations shown in the circuit diagram.

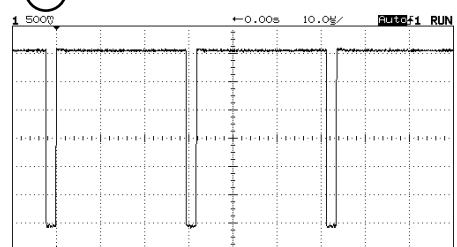

(13) PSD2 Pin 1

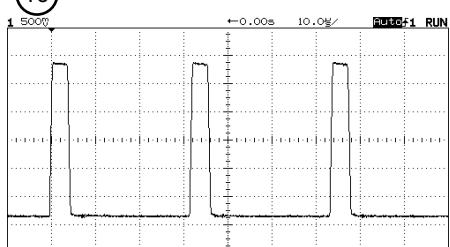

(14) PSD2 Pin 2

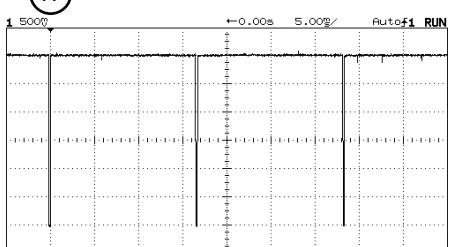

(15) PSD3 Pin 4

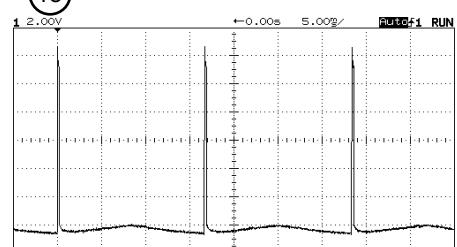

(16) PSD3 Pin 6

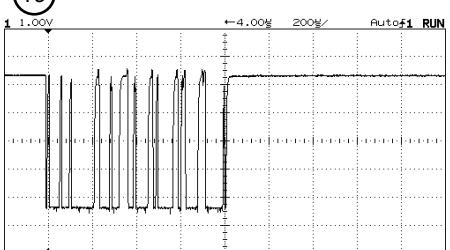

(17) PSD3 Pin 8

(18) PSD3 Pin 10

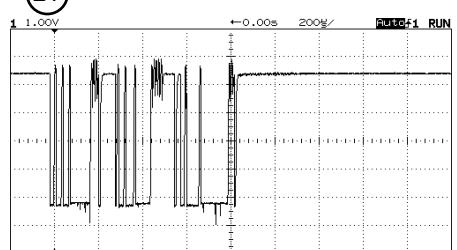

(19) PST1 Pin 1

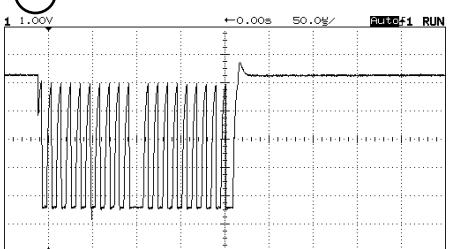

(20) PST1 Pin 2

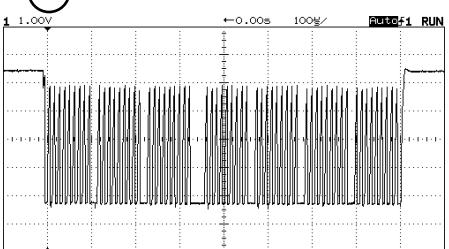

(21) PST1 Pin 5

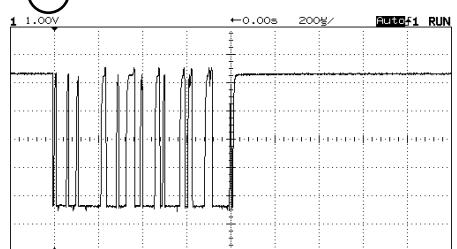

(22) PST1 Pin 6

(23) PSU1 Pin 1

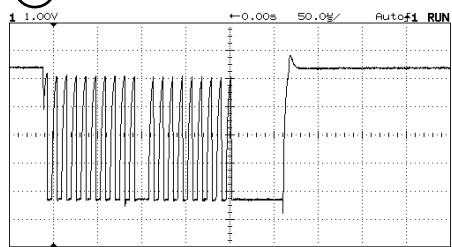

(24) PSU1 Pin 2

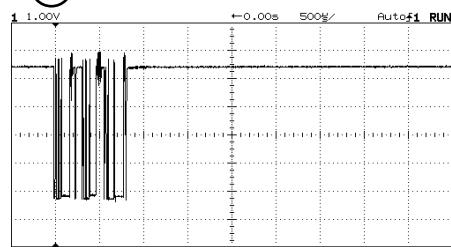

WAVEFORMS AT EACH SECTION

Numbers inside circle correspond to locations shown in the circuit diagram.

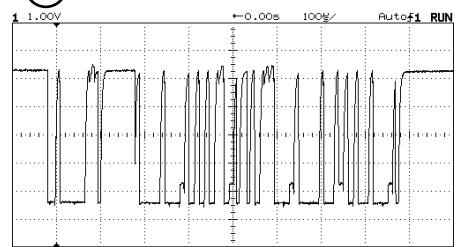

(25) PSU1 Pin 3

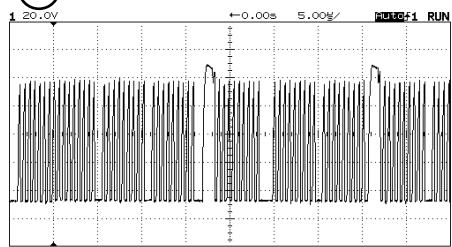

(26) PSU1 Pin 4

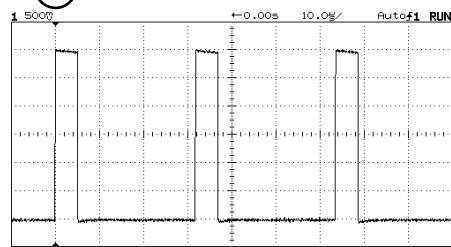

(27) PSZ2 Pin 1

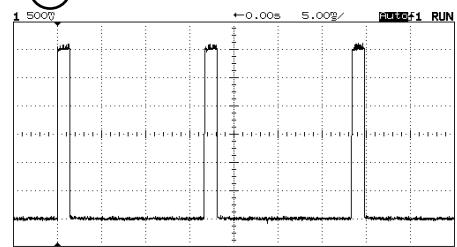

(28) PSZ2 Pin 2

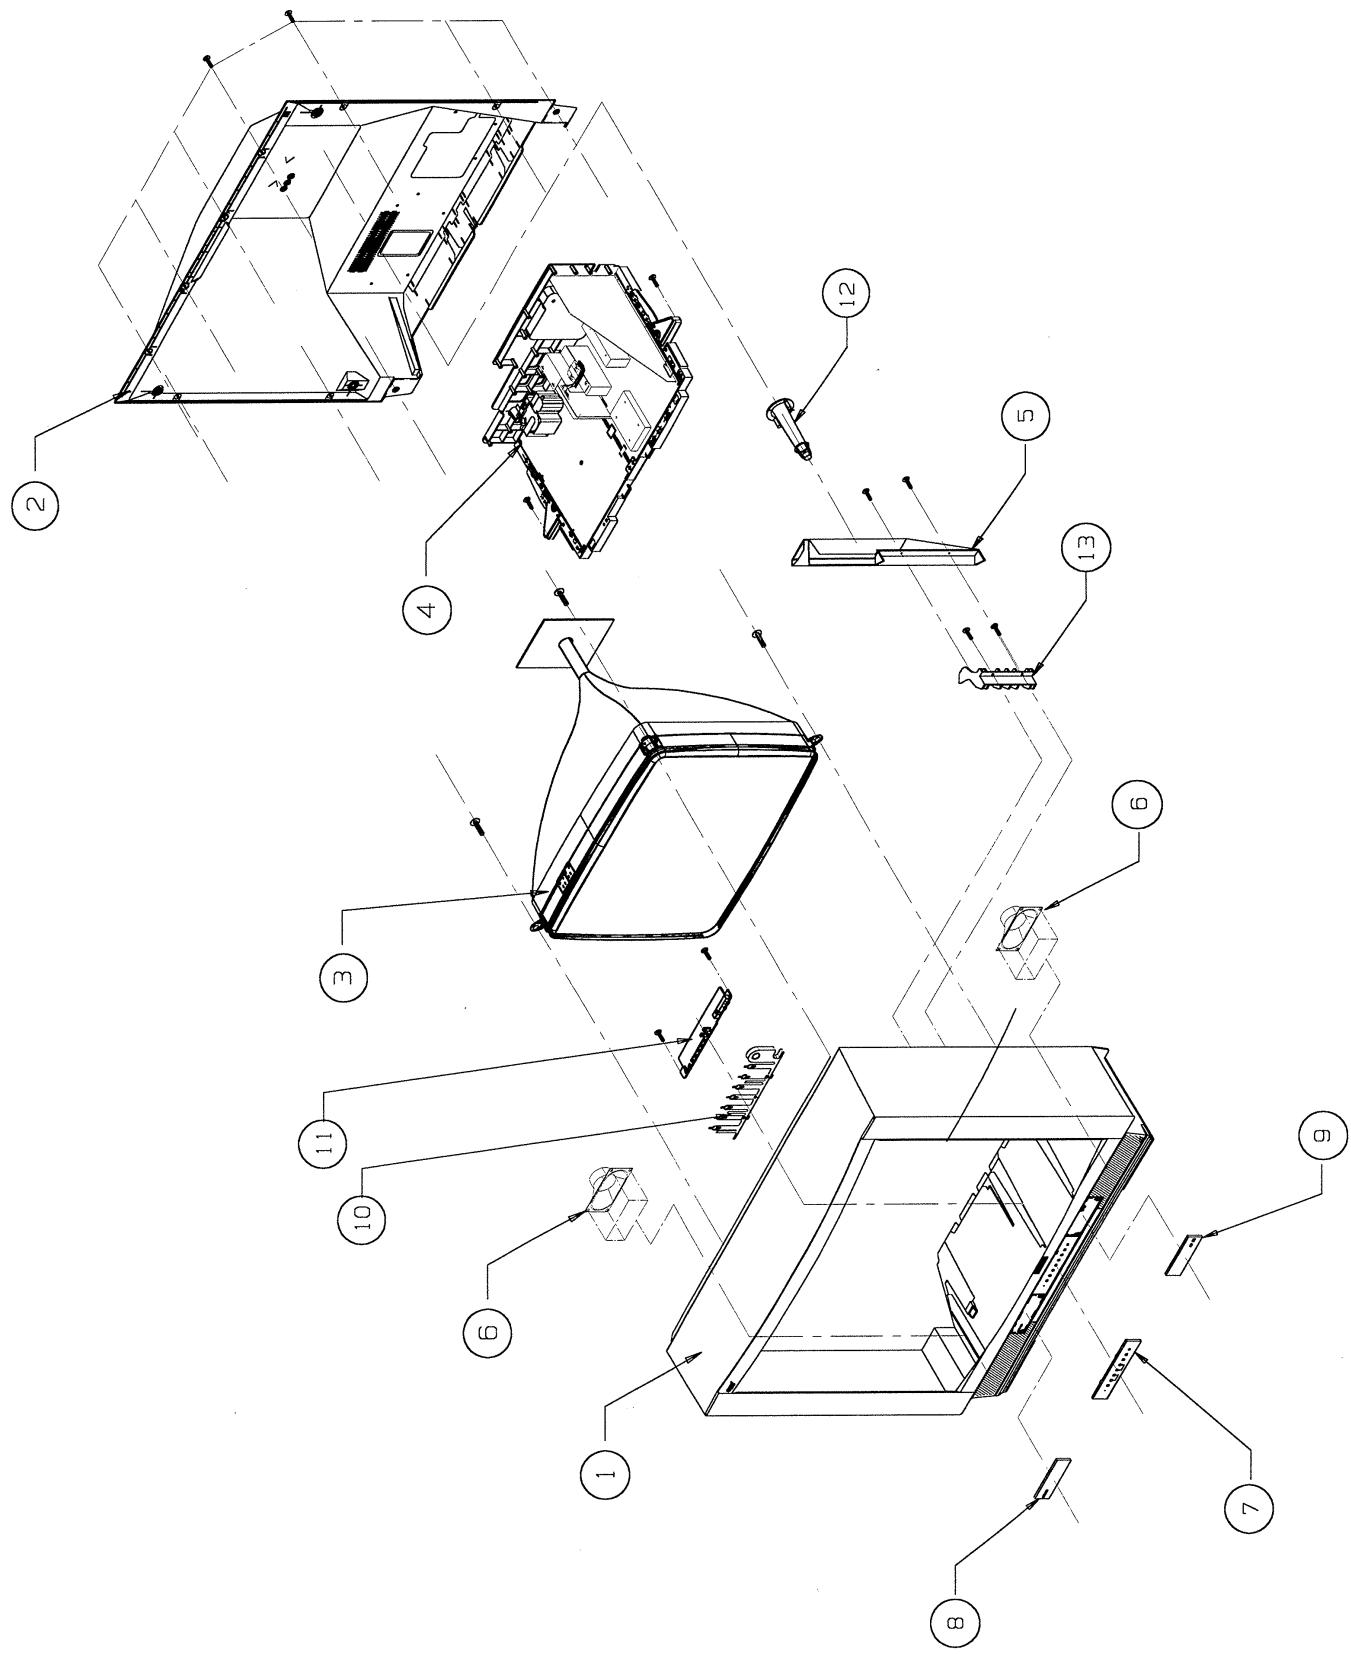

(29) PSZ2 Pin 12

(30) PSZ2 Pin 13

36/32UDX10S EXPLODED VIEW

NOTE: Parts 12 and 13 are for 32UDX model only.

EXPLODED VIEW PARTS LIST

ITEM	PART NUMBER	DESCRIPTION
1	QD21831	FRONT FRAME 36UDX
1	QD21861	FRONT FRAME 32UDX

CIRCUIT SCHEMATIC DIAGRAM

PRODUCT SAFETY NOTE: Components marked with a and shaded have special characteristics important to safety. Before replacing any of these components, read carefully the PRODUCT SAFETY NOTICE of this Service Manual. Don't degrade the safety of the receiver through improper servicing.

1 2 3 4 5 6

- All DC voltage to be measured with a tester (100kΩ/V). Voltage taken on a complex color bar signal including a standard color bar signal.
- Since this is a basic circuit diagram, the value of the parts is subject to be altered for improvement.

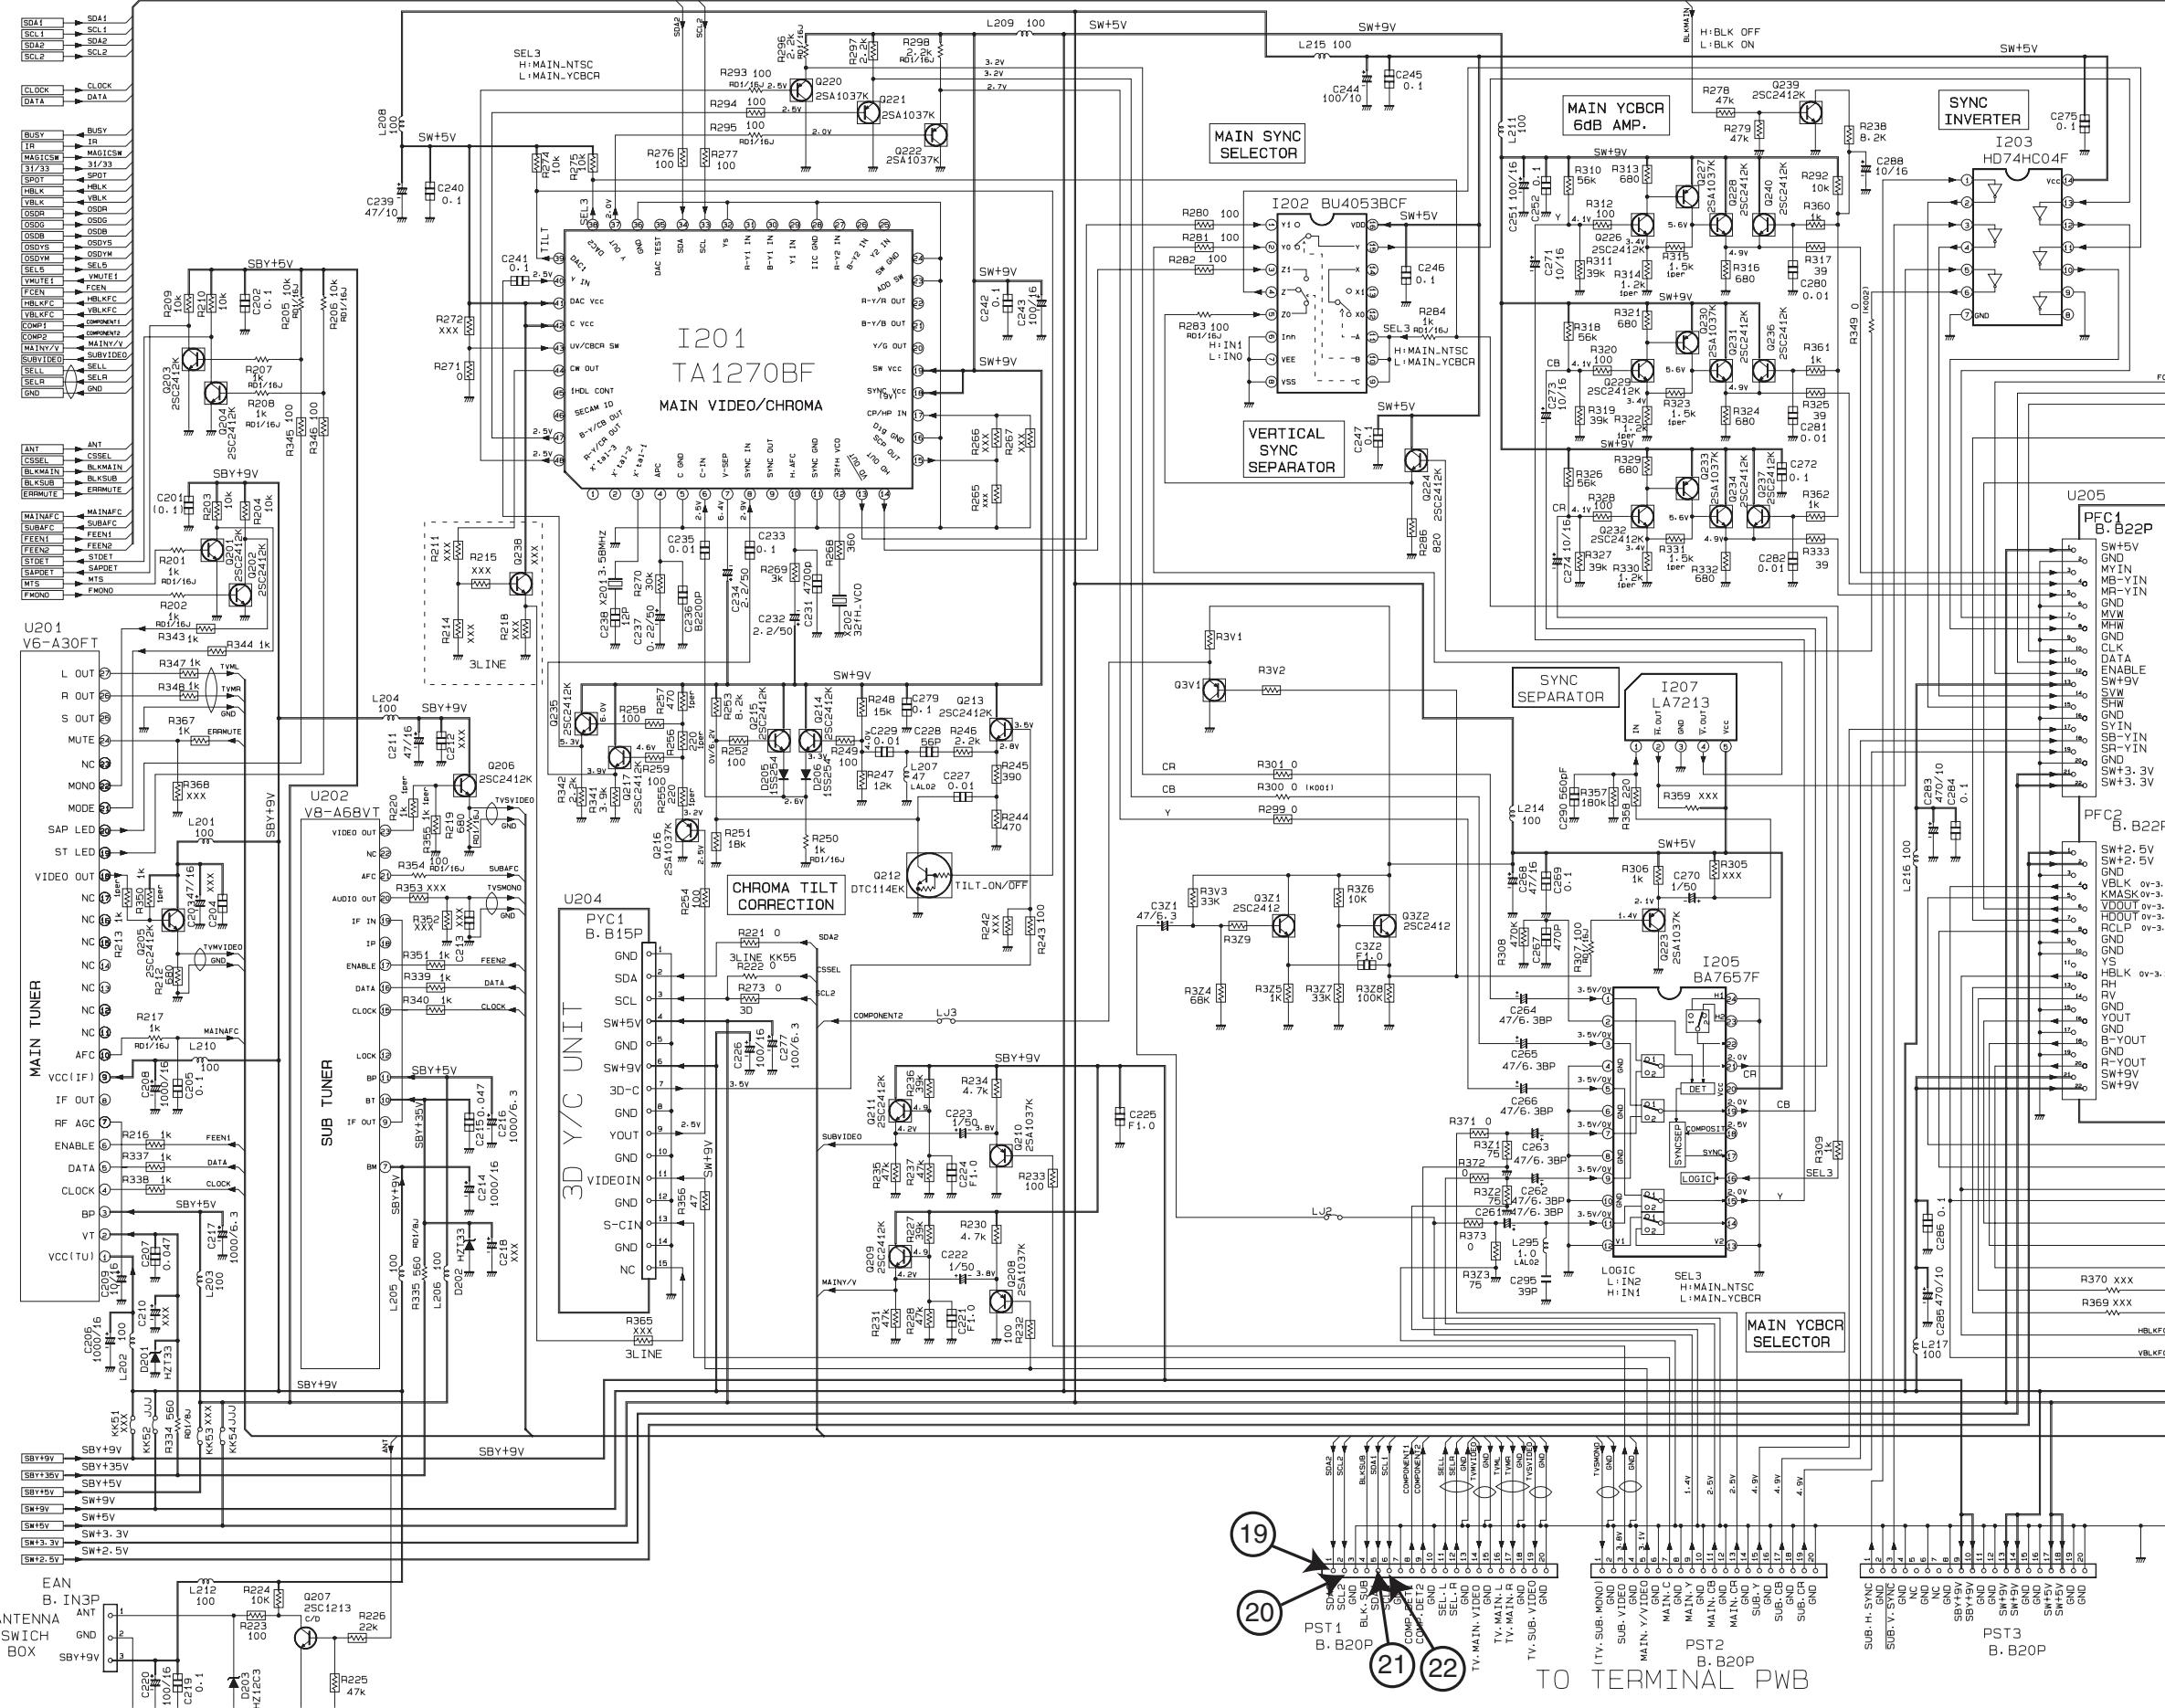

SIGNAL 1/2

PRODUCT SAFETY NOTE: Components marked with a and shaded have special characteristics important to safety. Before replacing any of these components, read carefully the PRODUCT SAFETY NOTICE of this Service Manual. Don't degrade the safety of the receiver through improper servicing.
