## SERVICE MANUAL

YK

No.013-1E

32PD7800  
42PD7800  
(PW2)

### Caution

Be sure to read this manual before servicing. To assure safety from fire, electric shock, injury, harmful radiation and materials, various measures are provided in this HITACHI Plasma display.

Be sure to read cautionary items described in the manual to maintain safety before servicing.

### Service Warning

1. Since Panel Module and front Filter are made of glass, handling the broken Module and Filter shall be taken care sufficiently in order not to be injured.
2. Replacing work shall be started after the Panel Module and the AC/DC Power supply become sufficiently cool.
3. Special care shall be taken to the display area in order not to damage its surface.
4. The Panel Module shall not be touched with bare hand to protect its surface from stains.
5. It is recommended to use clean soft gloves during the replacing work in order to protect not only the display area of the Panel Module but also a serviceman himself.
6. The Chip Tube of Panel Module (located upper left of the back and surrounded by frame) and flexible cables connecting Panel glasses to drive circuit PWBs are very weak, so shall be taken care sufficiently not to break. If you break Chip Tube, the Panel doesn't display anything forever.

## **6. Adjustment**

### **• How to get to Adjustment mode**

Using the front control buttons with the set turned off (standby) can activate it.

Press the SUB-POWER( $\odot$ ) button, INPUT SELECT( $\square$ ) button and  $\blacktriangledown$  button at the same time, and hold for more than 5 seconds.

The set turns on in adjustment mode with OSD.

### **• Changing data and Selecting Adjustment code**

When the set is in adjustment mode, the cursor  $\blacktriangleleft$ ,  $\blacktriangleright$ ,  $\blacktriangleup$ ,  $\blacktriangledown$  and OK buttons of the remote control or front panel may be used as the adjustment keys.

$\blacktriangleup$ ,  $\blacktriangledown$  buttons are used for selecting adjustment code.

$\blacktriangleleft$ ,  $\blacktriangleright$  buttons are used for changing data values.

OK button is used for confirming the data.

After finishing the necessary adjustment press MENU button. Adjustment mode is released and the set returns to normal condition.

### **• Memory Initialize operation**

**NOTE:** The execution of this function returns the adjustment codes to the preset values, therefore, adjustment data will be lost.

#### **Procedure**

- (1) Enter Adjustment Mode.
- (2) Select MEMORY INIT adjustment code (No.658) and change the data value from 0 to 1.
- (3) Activate MEMORY INIT by pressing OK button.
- (4) Select No.525 and change data value from 1 to 0.
- (5) Check that the receiving channel goes to P1. Unit is set to preset values.

## 7. Troubleshooting

### ● How to get to Burn-in mode

This mode displays the test patterns of some single color raster in turn. These signals are from built-in generator of PDP panel. So it can be presumed that maybe the panel has some trouble when the screen of Burn-in mode is abnormal.

Using the front control buttons with the set turned off (standby) can activate this mode.

Press the SUB-POWER() button, INPUT SELECT() button and VOLUME DOWN() button at the same time, and hold for more than 5 seconds.

The set turns on with single color raster and the OSD of [BURN IN: ON].

To escape from this mode, press the SUB-POWER() button, INPUT SELECT() button and  button at the same time, and hold for more than 5 seconds. Burn-in mode will be released.

### ● How to recover the remote and front key function

If remote and front key cannot operate after miss set special function by front keys, these functions can recover by below method.

Press the SUB-POWER() button, INPUT SELECT() button and  button at the same time, and hold for more than 5 seconds.

The set turns on the service menu mode.

Select No.535 and No.536 then each data set from [0] to [1].

Or

Press the SUB-POWER() button and  button at the same time, and hold for more than 5 seconds

### ● How to check method of the use accumulation time for panel.

Select No.518 of Service Adjustment Menu.

## ● Signal circuit self-diagnosis function

This function is for the failure of the signal circuit, for example the phenomenon as below:

"Sometimes power turns off abnormally." "Sometimes picture disappears abnormally."

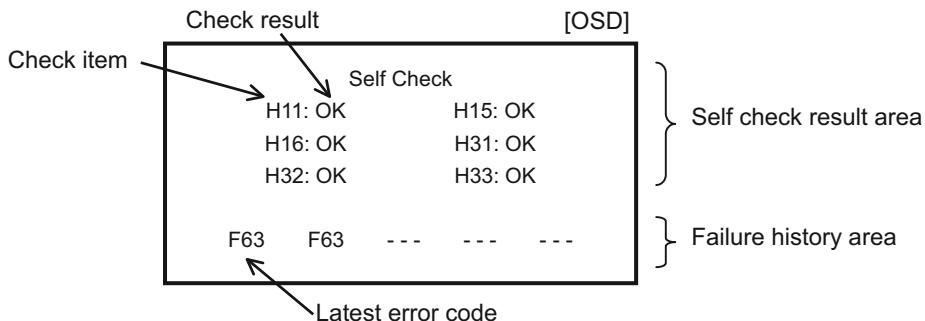

To enter to this Self-Diagnosis mode, follow the next steps:

### Preparation:

- 1) The Power Cord should be connected to AC line and the Main Power switch should be turned on.
- 2) Turn the power off by the SUB-POWER( $\ominus$ ) button of the monitor or the remote control.

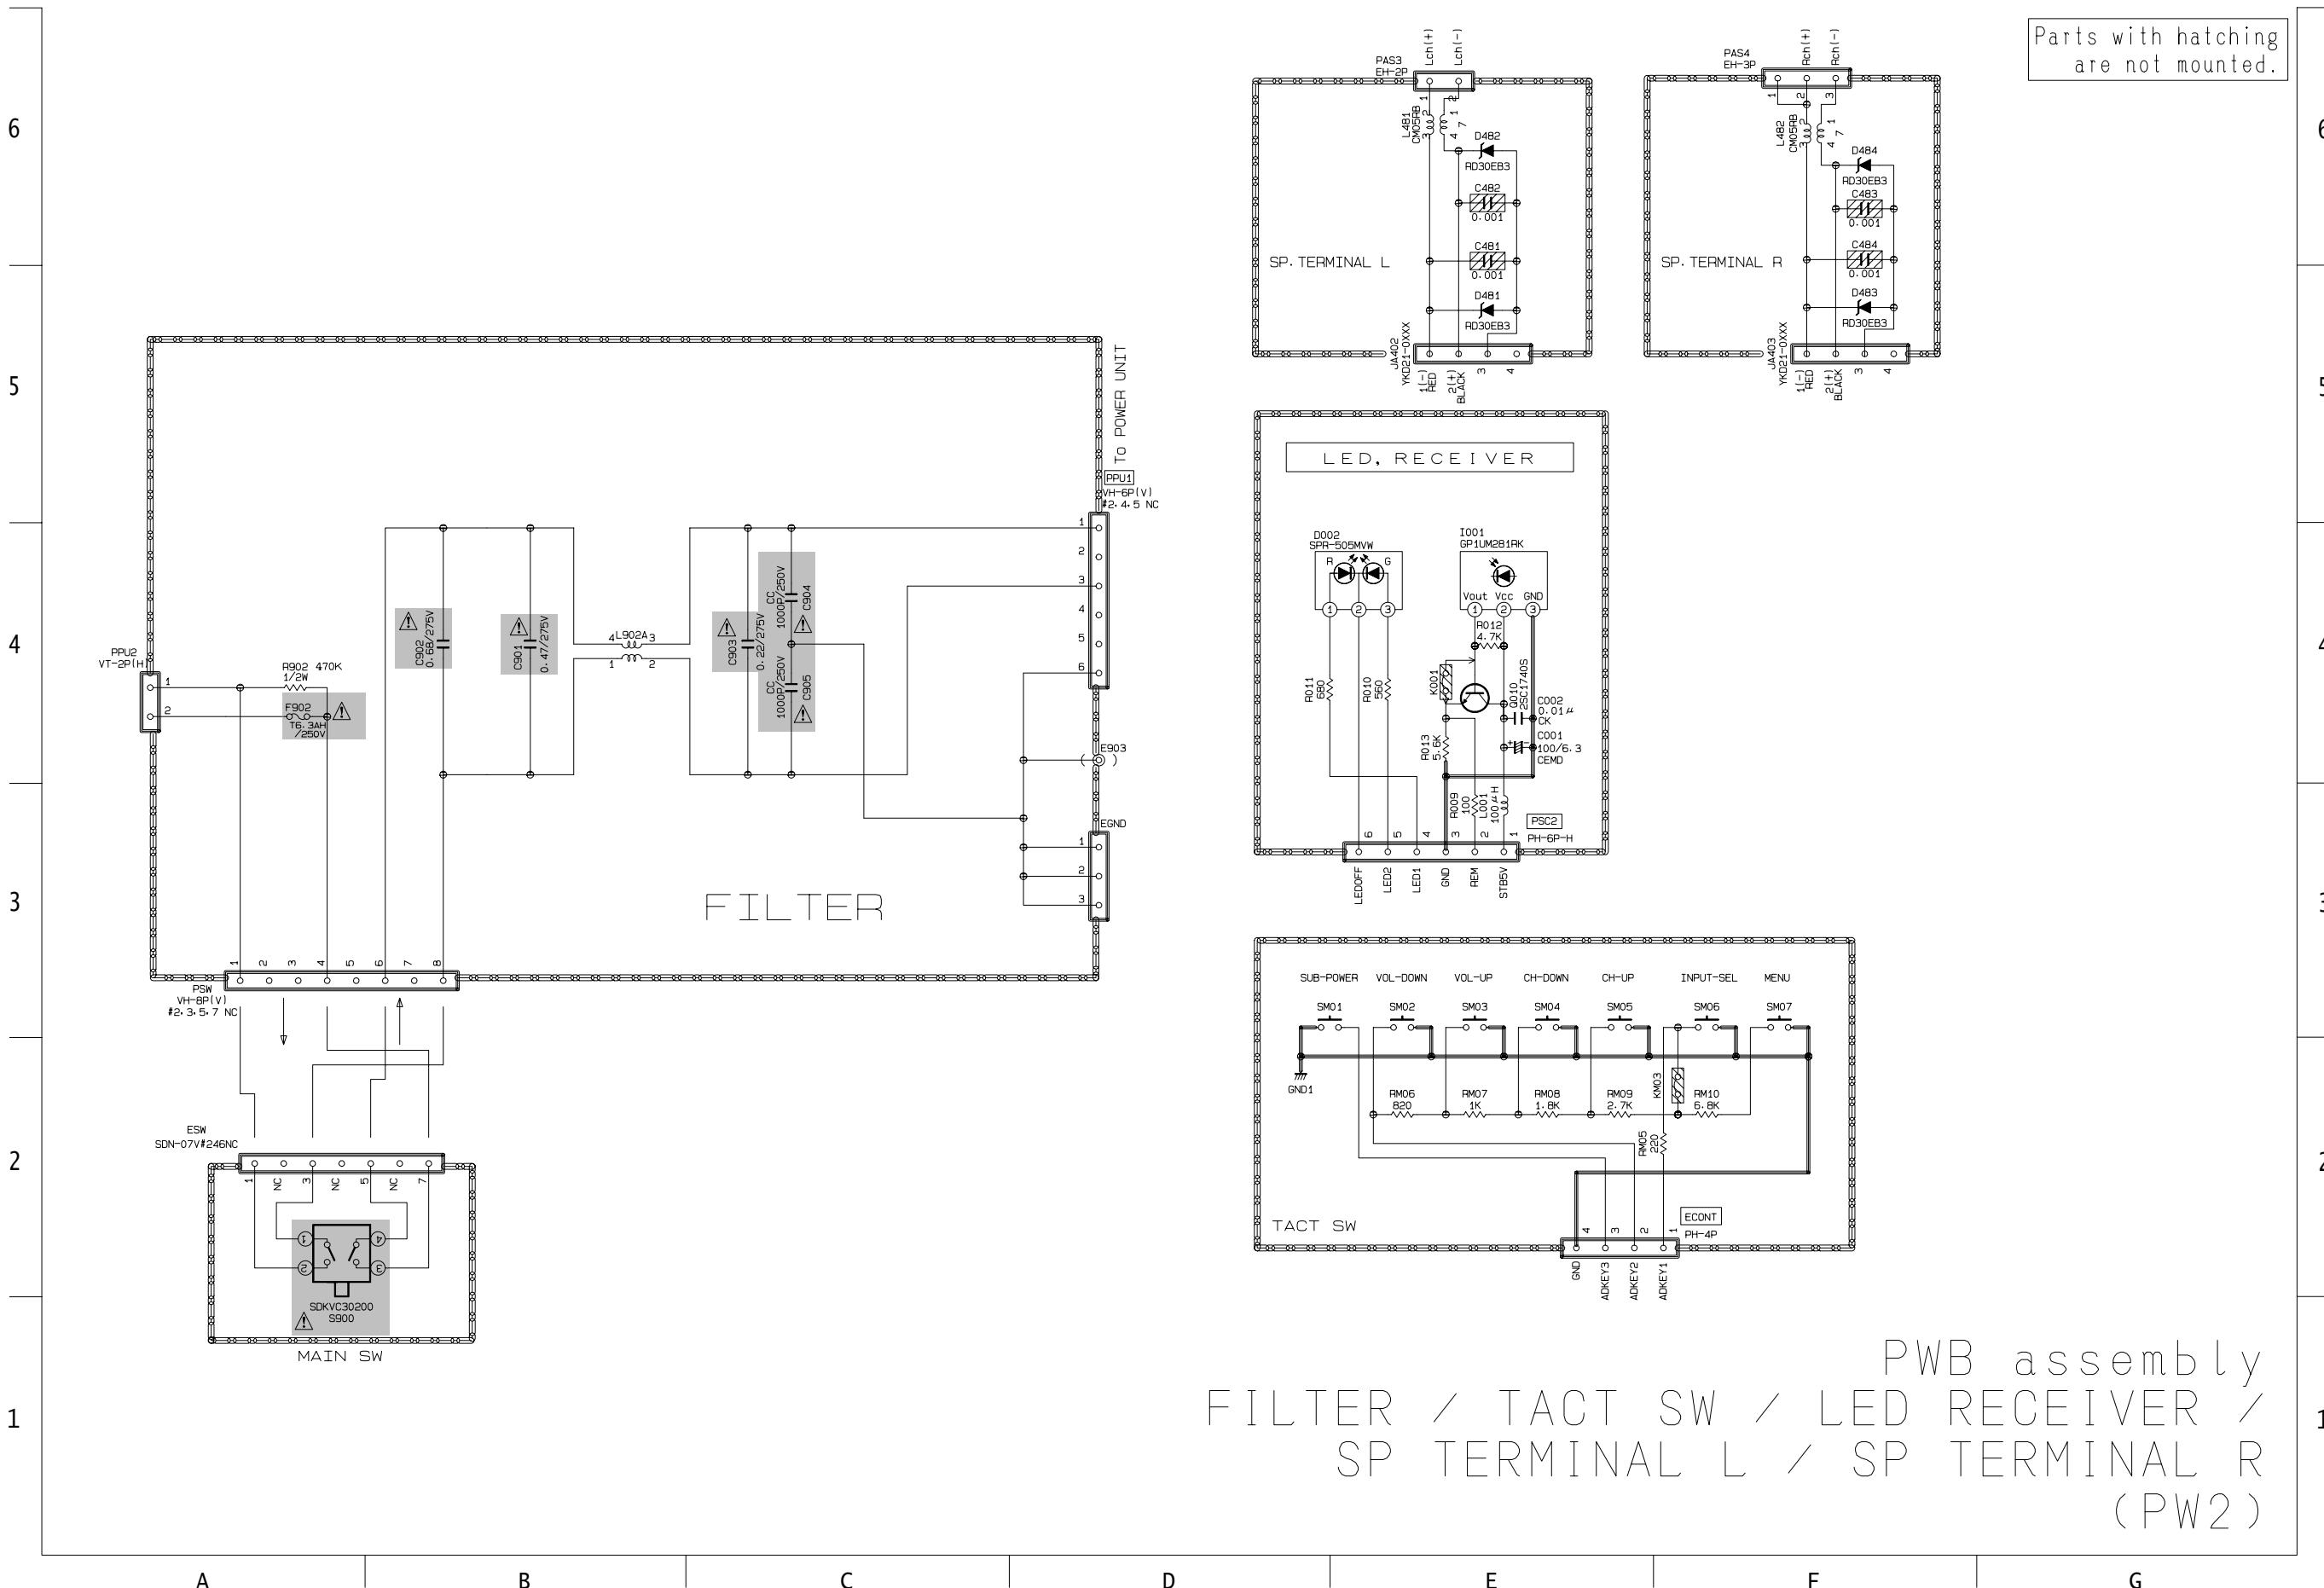

### Procedure:

- 1) Press the SUB-POWER( $\ominus$ ) button and  $\blacktriangle$  button on the bottom of the monitor at the same time, and keep it for more than 5 seconds after the power turned on.
- 2) The monitor will be turned on, and it will display On-Screen Display of the Self-check result and the failure history as below.
- 3) Any operation would cancel the Self -Diagnosis mode.
- 4) The following table shows the OSD symbols and contents of failure PWB in which failure most probably would be allocated according to the number of blinks.

Code	stored up in failure history	Self checking item	Problem	Phenomenon	Cause
C10	—	—	No sync. (Snow noise)	OSD of “ ! Check Antenna ” appears.	No connection of ANT cable Preset tuning is not yet
H11	—	○	Tuner problem	Cannot receive the main signal from antenna	Communication error of U101
H15	—	○	Composite video SW IC problem	Cannot receive picture and audio Cannot change input mode	Communication error of I201
H16	—	○	Component video SW IC problem	No component picture Cannot change input mode	Communication error of I601
H31	—	○	Color demodulator IC problem	Abnormal color Dark picture	Communication error of I501
H32	—	○	Sync. separator IC problem	Unsynchronized picture	Communication error of I503
H33	—	○	3D Y/C separator IC problem	Abnormal color Dark picture / No picture	Communication error of I302
F63	○	—	I <sup>2</sup> C-bus latch problem	Cannot store setting data (Ex. Channel, Volume etc.)	SCL3/SDA3 latched up

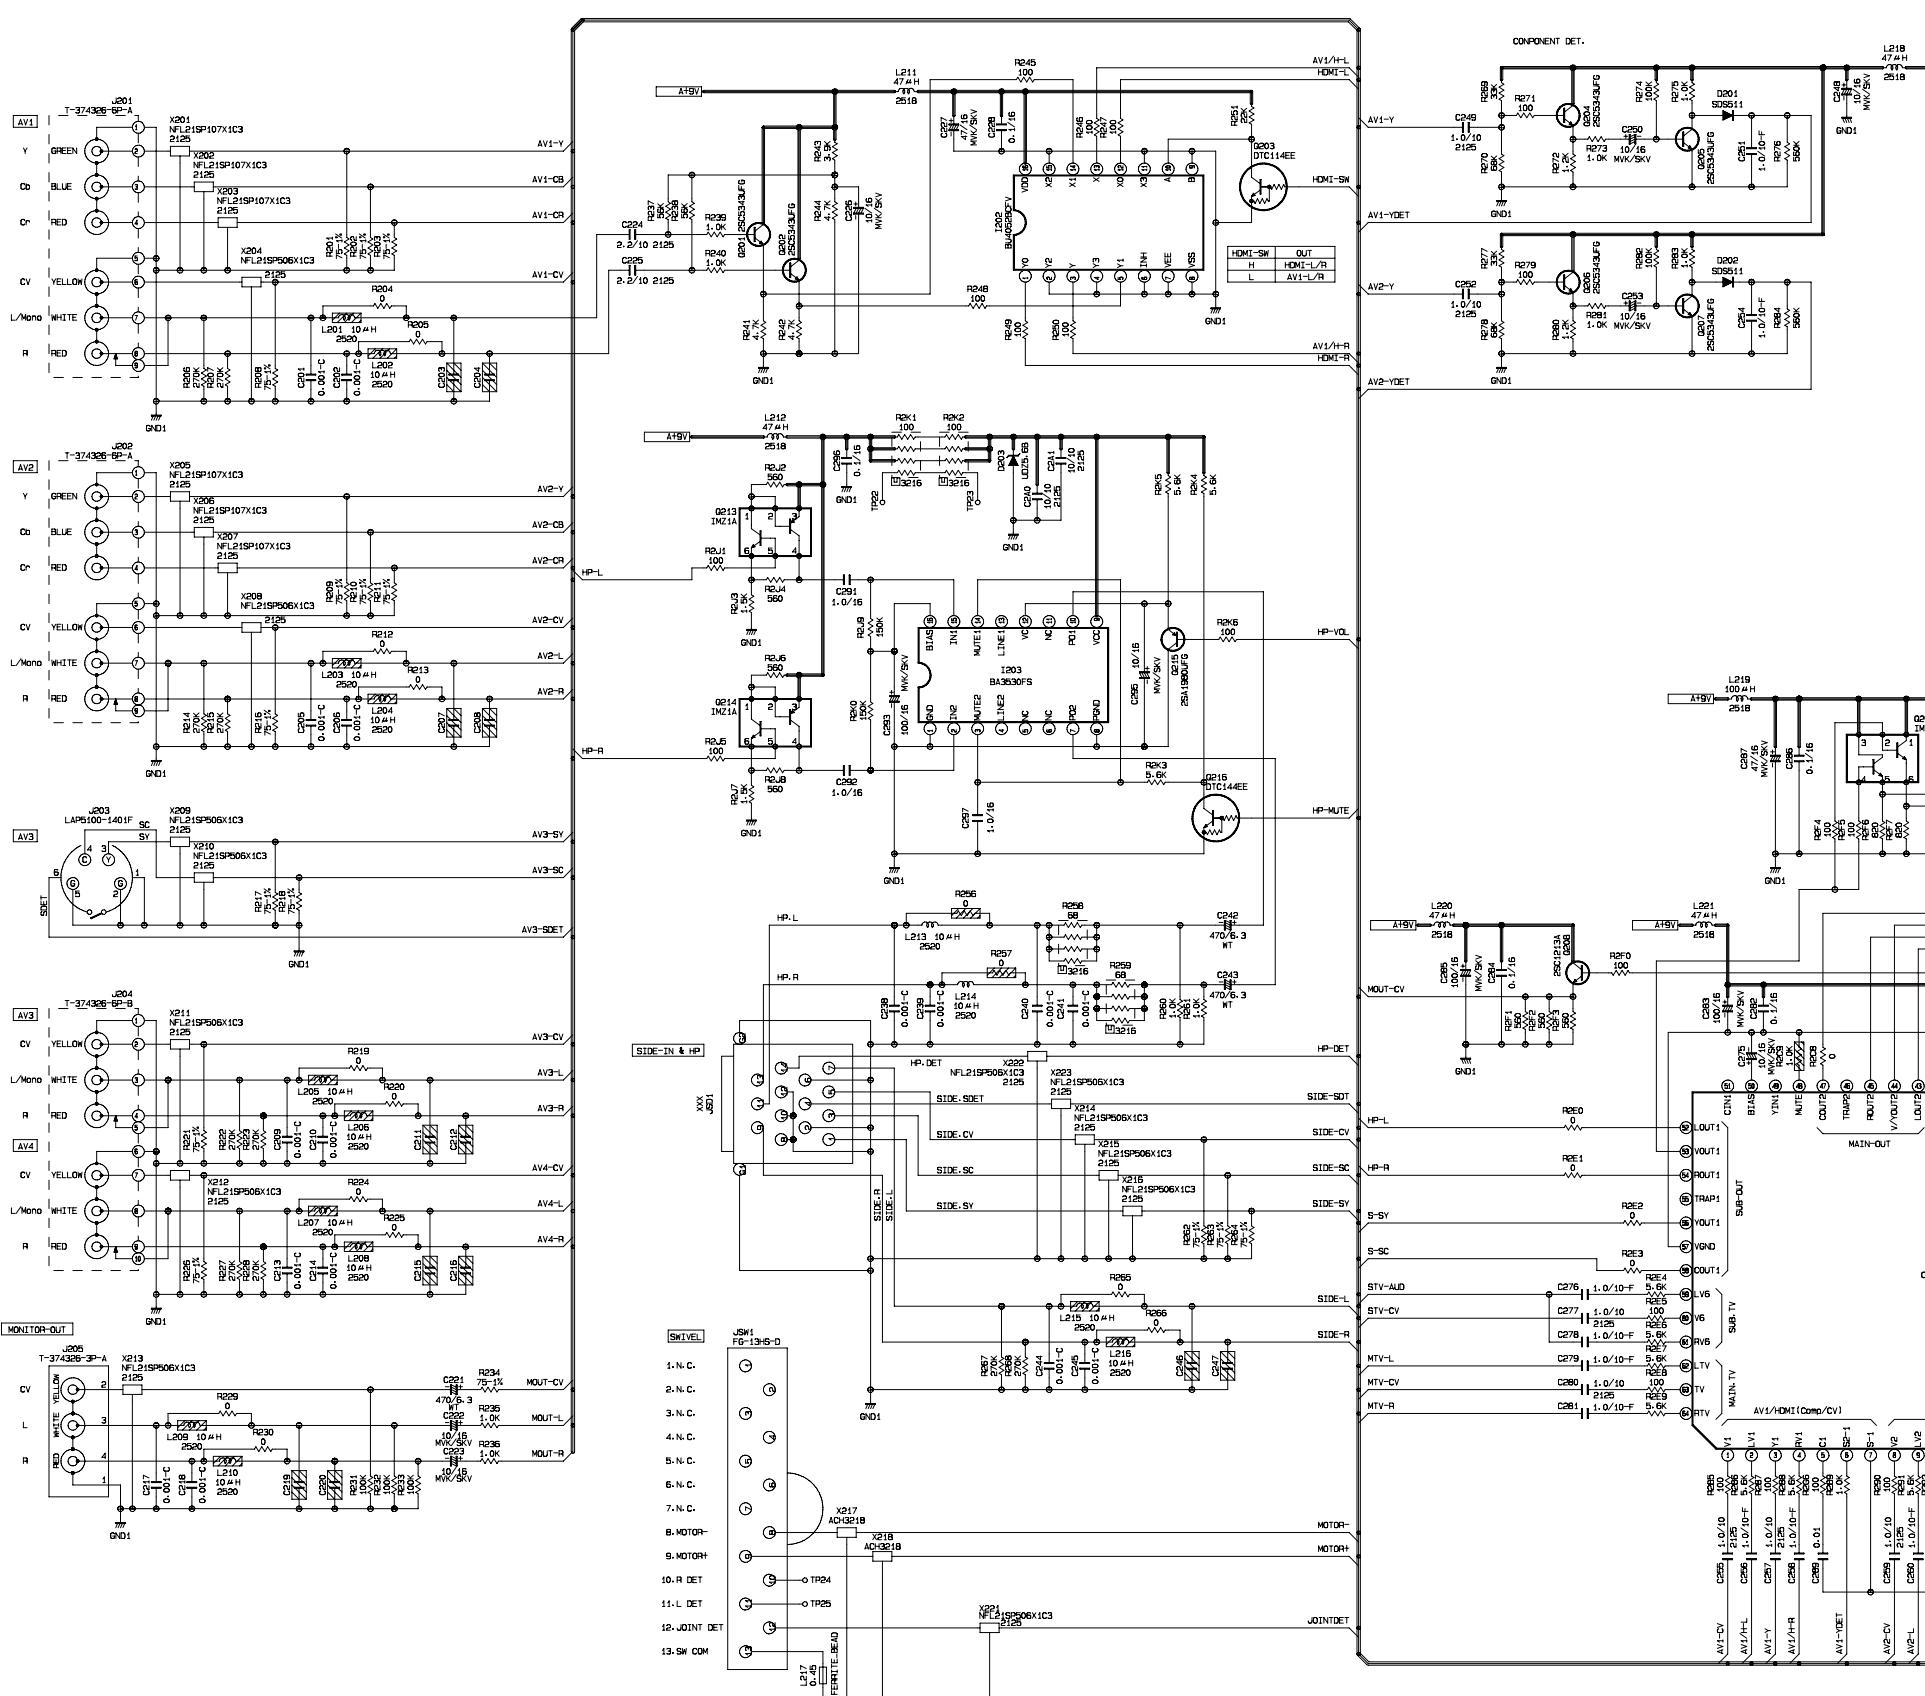

If you clear history of failure, make FACTORY RESET: enter the factory setting mode; press the SUB-POWER( $\ominus$ ) button, INPUT SELECT( $\square$ ) button and  $\blacktriangle$  button on the bottom of the monitor at the same time. And keep it for more than 5 seconds after the power turned on.
