1 Precautions

1-1 Safety Precautions

WARNINGS

1. For continued safety, do not attempt to modify the circuit board.
2. Disconnect the AC power before servicing.
3. When the chassis is operating, semiconductor heatsinks are potential shock hazards.

1-1-1 Servicing the High Voltage VR and CRT :

WARNING: Damaged IC202 may cause excessive x-ray emissions.

1. When servicing the high voltage system, remove the static charge by connecting a 10 kohm resistor in series with an insulated wire (such as a test probe) between the chassis and the anode lead.
2. If the HV VR requires adjustment:
This monitor does not need to adjust high voltage, high voltage step is saved at IC202, adjusting this high voltage to 24.5 ± 0.5 kV - 14", 25.0 ± 0.5 kV - 15".
3. When troubleshooting a monitor with excessively HV, avoid being unnecessarily close to the monitor. Do not operate the monitor for longer than is necessary to locate the cause of excessive voltage.
4. High voltage should always be kept at the rated value, no higher. Only when high voltage is excessive are X-rays capable of penetrating the shell of the CRT, including the lead in glass material. Operation at high voltages may also cause failure of the CRT or high voltage circuitry.
5. When the HV regulator is operating properly, there is no possibility of an X-ray problem. Make sure the HV does not exceed its specified value and that it is regulating correctly.
6. The CRT is especially designed to prohibit X-ray emissions. To ensure continued X-ray protection, replace the CRT only with one that is the same or equivalent type as the original.
7. Handle the CRT only when wearing shatterproof goggles and after completely discharging the high voltage anode.
8. Do not lift the CRT by the neck.

1-1-2 Fire and Shock Hazard :

Before returning the monitor to the user, perform the following safety checks:

1. Inspect each lead dress to make certain that the leads are not pinched or that hardware is not lodged between the chassis and other metal parts in the monitor.

2. Inspect all protective devices such as nonmetallic control knobs, insulating materials, cabinet backs, adjustment and compartment covers or shields, isolation resistor-capacitor networks, mechanical insulators, etc.
3. Leakage Current Hot Check (Figure 1-1):
WARNING: Do not use an isolation transformer during this test.

Use a leakage current tester or a metering system that complies with American National Standards Institute (ANSI C101.1, *Leakage Current for Appliances*), and Underwriters Laboratories (UL Publication UL1410, 59.7).

4. With the unit completely reassembled, plug the AC line cord directly into a 120V AC outlet. With the unit's AC switch first in the ON position and then OFF, measure the current between a known earth ground (metal water pipe, conduit, etc.) and all exposed metal parts, including: metal cabinets, screwheads and control shafts. The current measured should not exceed 0.5 milliamp. Reverse the power-plug prongs in the AC outlet and repeat the test.

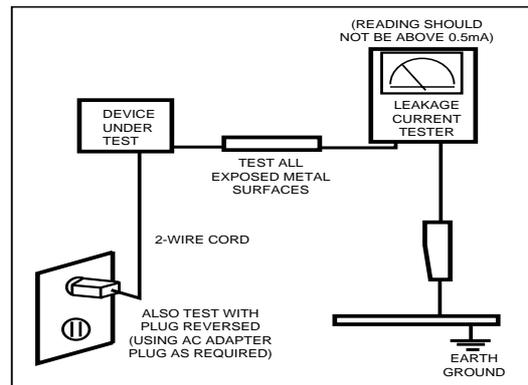

Figure 1-1. Leakage Current Test Circuit

1-1-4 Product Safety Notices

Some electrical and mechanical parts have special safety-related characteristics which are often not evident from visual inspection. The protection they give may not be obtained by replacing them with components rated for higher voltage, wattage, etc. Parts that have special safety characteristics are identified by  on schematics and parts lists. A substitute replacement that does not have the same safety characteristics as the recommended replacement part might create shock, fire and / or other hazards. Product safety is under review continuously and new instructions are issued whenever appropriate.

Components identified by  on schematics and parts lists must be sealed by a soldering iron after replacement and adjustment.

1-2 Servicing Precautions

WARNING1: First read the “Safety Precautions” section of this manual. If unforeseen circumstances create conflict between the servicing precautions and safety precautions, always follow the safety precautions.

WARNING2: An electrolytic capacitor installed with the wrong polarity might explode.

1. Servicing precautions are printed on the cabinet, and should be followed closely.
2. Always unplug the unit’s AC power cord from the AC power source before attempting to: (a) remove or reinstall any component or assembly, (b) disconnect PCB plugs or connectors, (c) connect all test components in parallel with an electrolytic capacitor.
3. Some components are raised above the printed circuit board for safety. An insulation tube or tape is sometimes used. The internal wiring is sometimes clamped to prevent contact with thermally hot components. Reinstall all such elements to their original position.
4. After servicing, always check that the screws, components and wiring have been correctly reinstalled. Make sure that the area around the serviced part has not been damaged.
5. Check the insulation between the blades of the AC plug and accessible conductive parts (examples: metal panels, input terminals and earphone jacks).
6. Insulation Checking Procedure: Disconnect the power cord from the AC source and turn the power switch ON. Connect an insulation resistance meter (500 V) to the blades of the AC plug.
The insulation resistance between each blade of the AC plug and accessible conductive parts (see above) should be greater than 1 megohm.
7. Never defeat any of the +B voltage interlocks. Do not apply AC power to the unit (or any of its assemblies) unless all solid-state heat sinks are correctly installed.
8. Always connect a test instrument’s ground lead to the instrument chassis ground *before* connecting the positive lead; always remove the instrument’s ground lead last.

1-3 Electrostatically Sensitive Devices (ESD) Precautions

Some semiconductor (solid state) devices can be easily damaged by static electricity. Such components are commonly called Electrostatically Sensitive Devices (ESD). Examples of typical ESD devices are integrated circuits and some field-effect transistors. The following techniques will reduce the incidence of component damage caused by static electricity.

1. Immediately before handling any semiconductor components or assemblies, drain the electrostatic charge from your body by touching a known earth ground. Alternatively, wear a discharging wrist-strap device. To avoid a shock hazard, be sure to remove the wrist strap before applying power to the monitor.
2. After removing an ESD-equipped assembly, place it on a conductive surface such as aluminum foil to prevent accumulation of an electrostatic charge.
3. Do not use freon-propelled chemicals. These can generate electrical charges sufficient to damage ESDs.
4. Use only a grounded-tip soldering iron to solder or desolder ESDs.
5. Use only an anti-static solder removal device. Some solder removal devices not classified as “anti-static” can generate electrical charges sufficient to damage ESDs.
6. Do not remove a replacement ESD from its protective package until you are ready to install it. Most replacement ESDs are packaged with leads that are electrically shorted together by conductive foam, aluminum foil or other conductive materials.
7. Immediately before removing the protective material from the leads of a replacement ESD, touch the protective material to the chassis or circuit assembly into which the device will be installed.
Caution: Be sure no power is applied to the chassis or circuit and observe all other safety precautions.
8. Minimize body motions when handling unpackaged replacement ESDs. Motions such as brushing clothes together, or lifting your foot from a carpeted floor can generate enough static electricity to damage an ESD.
9.  Indicates ESDs on the Schematic Diagram in this manual.

Note 1: This monitor requires a cable adapter for use with a Macintosh computer. The MacMaster Cable Adapter supports all monitors and all Macintosh, Centris, Quadra, Duo Dock, and Power Macintosh computers. If you do not already have a cable adapter, check with your computer dealer.

Note 2: When used with a computer equipped with VESA DPMS functions, this monitor is EPA Energy Star compliant and NUTEK compliant.

Table 4-2. Display Power Management Signaling (DPMS)

| Items \ State | Normal Operation | Power saving function EPA/NUTEK | | |
|----------------------|-------------------------------|-----------------------------------|-----------------------------------|---------------------------------|

5 Disassembly and Reassembly

This section of the service manual describes the disassembly and reassembly procedures for the CHA42*7L/5**7L monitors.

WARNING: This monitor contains electrostatically sensitive devices. Use caution when handling these components.

5-1 Disassembly

- Cautions:**
1. Disconnect the monitor from the power source before disassembly.
 2. Follow these directions carefully; never use metal instruments to pry apart the cabinet.

5-1-1 Cabinet Disassembly

1. With a pad beneath it, stand the monitor on its front with the screen facing downward and the base closest to you. Make sure nothing will damage the screen.
2. Working from the back of the monitor, remove the four screws and remove the Rear Cover.
3. Using pinch-nose pliers or long-nose pliers, carefully disconnect the Anode Cap from the CRT.

Caution: Do not touch the anode contact on the CRT.

5-1-2 Removing the CRT Socket PCB

1. Complete all previous steps.
2. Disconnect CRT and Main PCB ground wires on CRT Socket PCB and Shield Cover.
3. Desolder the 5 tabs on the underside of the CRT Socket PCB shield and remove the CRT Socket PCB Shield.
4. Using a knife, cut through the silicone bond and lift off the CRT Socket PCB.
5. Disconnect connectors CN102 and CN103 on the CRT Socket PCB.
6. Using a solder iron, disconnect CN202_2.
7. Disconnect CRT Socket and Focus (G3) wires on CRT Socket PCB.
8. Place Video PCB on a flat, level surface that is protected from static electricity.

5-1-3 Removing the Main PCB

1. Complete all previous steps.
2. Disconnect Degaussing Coil at the CN601 connector on the Main PCB.
3. Disconnect all easily accessible ground wires on the Main PCB and Chassis Bottom.
4. Disconnect the DY connector between the DY and the CN301, CN302, CN502 and CN503 connector on the Main PCB.
5. Remove the screws on the back and along each side of the Chassis Bottom.
6. Carefully lift the Main PCB Ass'y.
7. Remove all other ground wires.

5-1-4 CRT Ass'y Disassembly

1. Complete all previous steps.
2. Straighten the Degaussing Coil Assembly coated metal ties and lift Coil Ass'y from the CRT.
3. Remove the four corner screws and lift the CRT up and away from the Front Cover Assembly and place it on a padded surface.

Caution: Do not lift the CRT by the neck.

If you will be returning this CRT to the monitor, be sure to place the CRT face downward on a protective pad.

Memo

6 Alignment and Adjustments

This section of the service manual explains how to make permanent adjustments to the monitor. Directions are given for adjustments using the monitor Interface Board Ver. 2.0 and software (SoftJig).

6-1 Adjustment Conditions

Caution: Changes made without the SoftJig are saved only to the user mode settings. As such, the settings are not permanently stored and may be inadvertently deleted by the user.

6-1-1 Before Making Adjustments

6-1-1 (a) ORIENTATION

When servicing, always face the monitor to the east.

6-1-1 (b) MAGNETIC FIELDS

Whenever possible, use magnetic field isolation equipment such as a Helmholtz field to surround the monitor. If a Helmholtz field is not available, frequently degauss the unit under test.

Caution: Other electrical equipment may cause external magnetic fields which may interfere with monitor performance.

Use an external degaussing coil to limit magnetic build up on the monitor. If an external degaussing coil is not available, use the internal degaussing circuit. However, do not use the internal degaussing circuit more than once per 30 minutes.

6-1-1 (c) WARM-UP TIME

The monitor must be on for 30 minutes before starting alignment procedures. Warm-up time is especially critical in Color Temperature and White Balance adjustments.

6-1-1 (d) SIGNAL

Analog, 0.714 Vp-p positive at 75 ohm, internal termination

Sync: Separate

(TTL level negative/positive)

6-1-1 (e) SCANNING FREQUENCY

Horizontal: 30 kHz to 55 kHz (automatic)-14"

30 kHz to 61 kHz (automatic)-15"

Vertical: 50 Hz to 120 Hz (automatic)

Unless otherwise specified, adjust at the 800 x 600 mode (H : 53.7 kHz, V: 85 Hz)-15", the 640 x 480 mode (H : 43.8 kHz, V: 85 Hz)-14" signals.

Refer to Table on page 3-3.

6-1-1 (f) +B 13 V LINE CHECK

No beam

Contrast: Maximum

Brightness: Maximum

Check the DC 13 V \pm 0.2 V at Cathode of D616 Point and GND.

6-1-1 (g) HIGH VOLTAGE CHECK

No beam

Contrast: Maximum

Brightness: Maximum

Check the high voltage to 24.5 \pm 0.5 kV - 14", 25 \pm 0.5 kV - 15" at anode and GND.

6-1-1 (i) CENTER RASTER

Adjust VR502 so that the back raster comes to the center when you apply a signal of 53.7 kHz / 85 Hz - 14", 60 kHz / 75 Hz - 15" .

6-1-1 (j) BRIGHTNESS AND CONTRAST

Unless otherwise specified, adjust brightness and contrast buttons:

Brightness: Maximum

(press ⊕ button until the LED is blink)

Contrast: Maximum

(press ⊕ button until the LED is blink)

6-1-2 Required Equipment

The following equipment may be necessary for adjustment procedures:

6-1-2 (a) DISPLAY CONTROL ADJUSTMENT

1. Non-metallic (-) screwdriver: 1.5 mm
Non-metallic (-) screwdriver: 3 mm
2. Philips (+) screwdriver: 1.5 mm
3. Non-metallic hexkey: 2.5 mm
4. Digital Multimeter (DMM), or Digital Voltmeter (DVM)
5. Signal generator, or Computer with a video board that uses the ET-4000 chipset (strongly recommended if using Samsung DM 200 software) and that displays: 800 x 600 @ 85 Hz, or 800 x 600 @ 75 Hz (minimum).
6. Personal computer
7. Required software: Softjig.exe from Samsung, Samsung DM200, or DisplayMate for Windows from Sonera Technologies
8. Interface Board Ver. 2.0 Code No. BH81-90001K
9. Parallel communications cable (25-pin to 25-pin); Code No. BH81-90001H
10. Signal cable (15-pin to 15-pin cable with additional 3-pin connector); Code No. BH81-90001J
11. 5 V DC adapter, not supplied

Note: Softjig Assembly (includes items 8, 9 and 10 Code No. BH81-90001L)

6-1-2 (b) COLOR ADJUSTMENTS

1. All equipment listed in 6-1-2 (a), above
2. Color analyzer, or any luminance measurement equipment

6-1-3 Connecting the SoftJig

Connect the monitor to the signal generator and/or PC as illustrated in Figures 6-1 and 6-2.

Note: The signal cable connector which includes the 3-wire cable must connect to the monitor. If you use Setup 2 (PC only, no signal generator) you can only make adjustments to the signal timing available on that computer system. To make corrections to all factory timings requires the use of an additional signal generator.

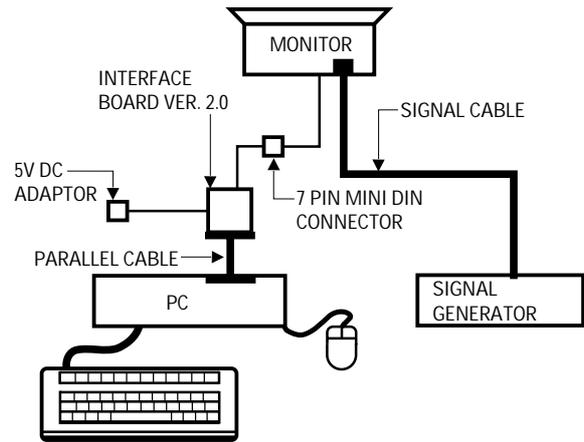

Figure 6-1. Setup 1, With Signal Generator

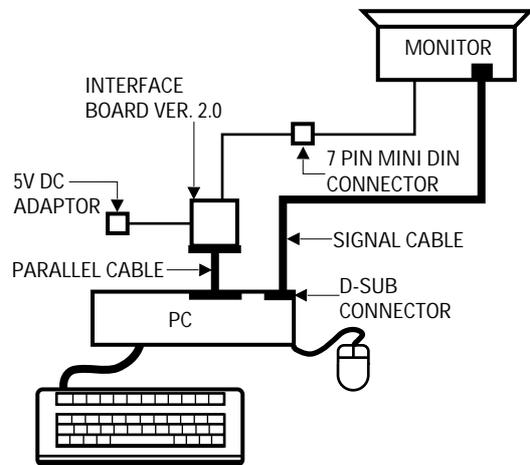

Figure 6-2. Setup 2, Without Signal Generator

6-1-4 After Making Adjustments

After finishing all adjustments, test the monitor in all directions. If, for example, the monitor does not meet adjustment specifications when facing north, reposition the monitor to face east and readjust. This time, try for an adjustment closer to the ideal setting within the tolerance range. Test the unit again in all directions. If the monitor again fails to meet specifications in every direction, contact your Regional After Service Center for possible CRT replacement.

6-2 Display Control Adjustments

6-2-1 Centering

Centering means to position the center point of the display in the middle of the display area. Horizontal size and position and vertical size and position control the centering of the display.

Adjust the horizontal size and vertical size to their optimal settings: 267 mm (H) x 200 mm (V) for 15", 255 mm (H) x 191 mm (V) for 14"

Adjust the horizontal position and vertical position to within 4.0 mm of the center point of the screen.

$|A - B| \leq 5.0 \text{ mm.}$

$|C - D| \leq 5.0 \text{ mm.}$

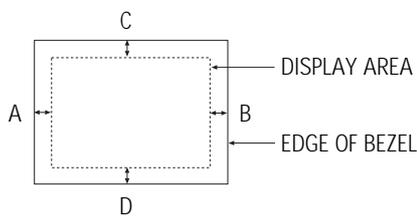

Figure 6-3. Centering

6-2-1 (a) HORIZONTAL MINIMUM SIZE ADJUSTMENT

CONDITIONS

Scanning frequency: 53.7 kHz/85 Hz (15")
43.3 kHz/85 Hz (14")

Display image: Crosshatch pattern
Brightness: Maximum
Contrast: Maximum

PROCEDURE

Horizontal minimum size can be adjusted as follows using Softjig.

1. Display the timing 800 x 600/85 Hz (15"), 640 x 480/85 Hz (14").
2. Adjust horizontal size to minimum size using H_SIZE.
3. Adjust horizontal minimum size to 250 mm (15") or 242 mm (14") using H_SIZE MIN.
4. Adjust horizontal size to 267 mm (15") or 255 mm (14") using H_SIZE.
5. Press the ALL MODE SAVE horizontal minimum size for each timing is saved automatically.

If horizontal minimum size range cannot meet the spec, horizontal maximum size of 640 x 480/75 Hz including 800 x 600/60 Hz, 56 Hz, may be saturated or cannot overscan the bezel.

6-2-1 (b) VERTICAL SIZE ADJUSTMENT

CONDITIONS

Scanning frequency: 53.7 kHz/85 Hz (15")
43.3 kHz/85 Hz (14")

Display image: Crosshatch pattern
Brightness: Maximum
Contrast: Maximum

Adjust the vertical size of the display pattern to 200 mm (15") and 191 mm (14").

(Tolerance: $\pm 3 \text{ mm.}$)

6-2-1 (c) HORIZONTAL POSITION ADJUSTMENT

CONDITIONS

Scanning frequency: 53.7 kHz/85 Hz (15")
43.3 kHz/85 Hz (14")

Display image: Crosshatch pattern

PROCEDURE

Center the test pattern on the raster.

6-2-1 (d) VERTICAL POSITION ADJUSTMENT

CONDITIONS

Scanning frequency: 53.7 kHz/85 Hz (15")
43.3 kHz/85 Hz (14")

Display image: Crosshatch pattern

Center the test pattern on the raster.

6-2-2 Linearity

Linearity affects the symmetry of images as they appear on the screen. Unless each row or column of blocks in a crosshatch pattern is of equal size, or within the tolerances shown in Tables 6-1 and 6-2, an image appears distorted, elongated or squashed.

The formular of linearity (%)

$$= \frac{2 \times (\text{Max} - \text{Min})}{\text{Max} + \text{Min}} \times 100$$

Table 6-1. Standard Modes Linearity: 800 x 600/85Hz - 15"
640 x 480/85 Hz - 14"

| Standard Timing Modes | |
|-----------------------|--|
| Each block (10 %) | Difference between adjacent blocks (4 %) |

Table 6-2. Other Modes Linearity: VGA, SVGA, XGA, MAC, etc.

| Supported Timing Mode | |
|-----------------------|--|
| Each block (14 %) | Difference between adjacent blocks (5 %) |

6-2-3 Trapezoid Adjustment

CONDITIONS

Scanning frequency: 53.7 kHz / 85 Hz (15")
43.3 kHz / 85 Hz (14")

Display image: Crosshatch pattern

Make the the test pattern rectangular.

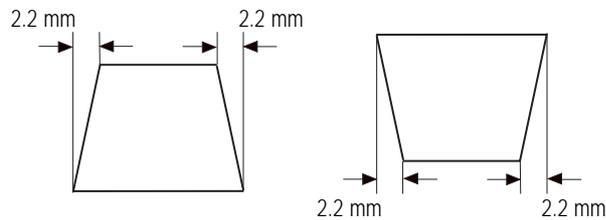

Figure 6-4. Trapezoid

6-2-4 Parallelogram Adjustment

CONDITIONS

Scanning frequency: 53.7 kHz / 85 Hz (15")
43.3 kHz / 85 Hz (14")

Display image: Crosshatch pattern

To activate the Parallelogram Adjustment function, push both the Horizontal Position and Vertical Position buttons and hold them in for longer than 3 seconds, or until the power indicator LED changes from green to blink and back to green.

Use the Increase (+) and Decrease (-) buttons to correct the display shape.

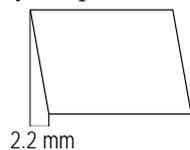

Figure 6-5. Parallelogram

6-2-5 Side Pincushion Adjustment

CONDITIONS

Scanning frequency: 53.7 kHz / 85 Hz (15")
43.3 kHz / 85 Hz (14")

Display image: Crosshatch pattern

After pushing the Side Pincushion button once, push the Increase (+) and Decrease (-) buttons to straighten the sides of the test pattern.

$$|C1|, |C2| \leq 2.0 \text{ mm}, |D1|, |D2| \leq 2.2 \text{ mm}.$$

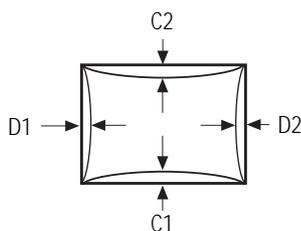

Figure 6-6. Pincushion

6-2-6 CRT Tilt Adjustment

TILT ADJUSTMENT (CHA5807L With Tilt)

Push the V-Posi and H-Size simultaneously until Led blinks and back on again. Push the Increase (+) and Decrease (-) buttons to correct the Tilt.

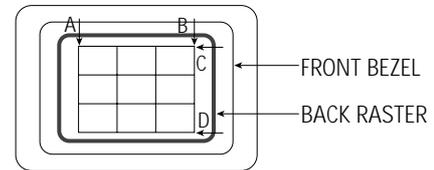

Figure 6-7. CRT Tilt Adjustment

6-2-7 Vertical Linearity Adjustment

To activate the vertical linearity adjustment, push both the horizontal position and horizontal size buttons and hold then in for longer than 3 seconds, or until the power indicator LED changes from green to blink and back to green.

Use the Increase (+) and Decrease (-) buttons to correct the display shape.

6-2-8 Pin Balance Adjustments

To activate the pin balacne function, push both the horizontal position and vertical Size buttons and hold then in for longer than 3 seconds, or until the power indicator LED changes from green to blink and back to green.

Use the Increase (+) and Decrease (-) buttons to correct the display shape.

6-2-9 Degauss

Push the contrast and brightness buttons simultaneously. The degaussing circuit can effectively function only once per 30 minutes. If available, use an external degaussing coil during servicing.

6-2-10 Delete User Mode Data

To delete the picture data from the user modes, push the contrast button and side pincushion button for 5 or more seconds simultaneously.

6-2-11 Recall

To delete the picture data from current user mode, push the contrast button and trapzoid button for 5 or more seconds simultaneoulsy.

6-3 Color Adjustments

Note 1: Color adjustment of this mode is controlled by Micom Jig or software.

Note 2: To make color adjustments you must have a color analyzer and one of the following configurations:

1. Signal Generator
or
2. Computer with Samsung DM 200 software or DisplayMate for Windows software from Sonera Technologies
3. In case of CHA5**7L, use 800 x 600 mode signal (53.7 kHz/85 Hz) for adjustments, in case of CHA42*7L, use 640 x 480 mode signal (43.3 kHz/85 Hz).

Before making adjustments, check that the video signals are as follows:

Video : Analog, 0.714 Vp-p (at 75 Ω termination)

Sync : Separate TTL level

Unless otherwise specified, use 800 x 600 mode signal (53.7 kHz/85 Hz) for adjustments.

6-3-1 Color Coordinates (Temperature)

Color temperature is a measurement of the radiant energy transmitted by a color. For computer monitors, the color temperature refers to the radiant energy transmitted by white. Color coordinates are the X and Y coordinates on the chromaticity diagram of wavelengths for the visible spectrum.

CONDITIONS

Measurement instrument: Color analyzer
 Scanning frequency: 53.7 kHz/85 Hz (15")
 43.3 kHz/85 Hz (14")
 Display image: White flat field at center of display area
 Luminance: Maximum

PROCEDURE

Using the directions in sections 6-3-2 through 6-3-5, adjust the Color Coordinates for 9300K to $x = 0.283 \pm 0.02$ and $y = 0.298 \pm 0.02$

6-3-2 Back Raster Color Adjustment

CONDITIONS

Measurement instrument: Color analyzer
 Scanning frequency: 53.7 kHz/85 Hz (15")
 43.3 kHz/85 Hz (14")
 Display image: Back raster pattern
 Brightness: Maximum
 Contrast: Maximum

PROCEDURE

1. Adjust the Screen VR on the FBT so that the brightness of the Back Raster is 0.3 to 0.5 ft-L (typically 0.4 ft-L).
2. Adjust the G_CUT to center.
3. Adjust the B_CUT to set the "y" coordinate to 0.298 ± 0.02 .
4. Adjust the R_CUT to set the "x" coordinate to 0.283 ± 0.02 .

Note: If the above adjustments cannot be done to each coordinate, adjust G_CUT to increase or decrease the green cutoff and repeat procedures 3 and 4.

6-3-3 Video Gain Adjustment

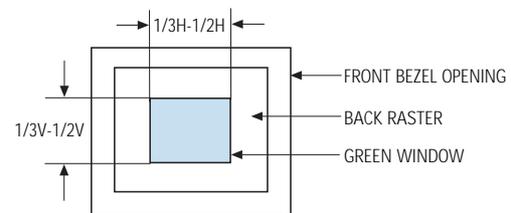

Figure 6-8. Green Box Pattern

CONDITIONS

Measurement instrument: Color analyzer
 Scanning frequency: 53.7 kHz/85 Hz (15")
 43.3 kHz/85 Hz (14")
 Display image: Green box pattern within range for which the ABL circuit is not active (1/3 to 1/2H and 1/3 to 1/2V).
 Brightness: Maximum
 Contrast: Maximum

PROCEDURE

1. Adjust G-Gain so that the brightness of the green gain is 40 ± 1 ft-L (typically 40 ft-L).

6-3-4 White Balance Adjustment

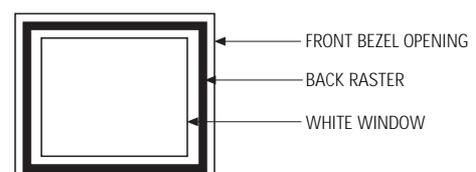

Figure 6-9. Full White Pattern

CONDITIONS

Measurement instrument: Color analyzer
Scanning frequency: 53.7 kHz/85 Hz (15")
43.3 kHz/85 Hz (14")
Display image: Full white pattern
Brightness: Maximum
Contrast: Maximum

PROCEDURE

1. Display the full white pattern.
2. Adjust R-Gain and B-Gain so that the video is white.
($x = 0.283 \pm 0.02$ and $y = 0.298 \pm 0.02$)

6-3-5 White Balance Fine Adjustment

CONDITIONS

Measurement instrument: Color analyzer
Scanning frequency: 53.7 kHz/85 Hz (15")
43.3 kHz/85 Hz (14")
Display image: Full white pattern
X-Y coordinates: $x = 0.283 \pm 0.02$
 $y = 0.298 \pm 0.02$

PROCEDURE

1. Adjust the Contrast control so that the brightness of the video is about 5 ft-L.
2. Check whether the white coordinates of the video meet the specification above. If they do not, adjust them so that they do.
3. Adjust the Contrast to maximum luminance.
4. Check whether the white coordinates still meet the specification above. If they do not, adjust them so that they do.

6-3-6 ABL Point Adjustment

CONDITIONS

Measurement instrument: Color analyzer
Scanning frequency: 53.7 kHz/85 Hz (15")
43.3 kHz/85 Hz (14")
Display image: Full white pattern
Brightness: Maximum
Contrast: Maximum

PROCEDURE

Adjust ABL so that the brightness level is 35 ± 1 ft-L.

6-3-7 Focus Adjustment

CONDITIONS

Measurement instrument: Color analyzer
Scanning frequency: 53.7 kHz/85 Hz (15")
43.3 kHz/85 Hz (14")
Display image: "H" character pattern
Brightness: Maximum
Contrast: Maximum

PROCEDURE

1. Adjust the Focus VR on the FBT to display the sharpest image possible.
2. Use Locktite to seal the Focus VR in position.

6-3-8 Luminance Uniformity Check

CONDITIONS

Measurement instrument: Color analyzer
Scanning frequency: 53.7 kHz/85 Hz (15")
43.3 kHz/85 Hz (14")
Display image: White flat field
Brightness: Cut off point at 30 ft-L

PROCEDURE

Measure luminance at nine points on the display screen: top left corner, top center, top right corner, center row left side, center, center row right side, bottom left corner, bottom center, and bottom right corner.

6-3-9 Color Purity Adjustment

Color purity is the absence of undesired color. Conspicuous mislanding (unexpected color in a uniform field) within the display area shall not be visible at a distance of 50 cm from the CRT surface.

CONDITIONS

Orientation: Monitor facing east
 Scanning frequency: 53.7 kHz/85 Hz (15")
 43.3 kHz/85 Hz (14")
 Display image: White flat field
 Luminance: Cutoff point at the center
 of the display area

Caution: Color purity adjustments should only be attempted by qualified personnel.

PROCEDURE

For trained and experienced service technicians only.

Use the following procedure to correct minor color purity problems:

1. Make sure the display is not affected by external magnetic fields. Use an external degaussing coil to neutralize magnetic fields which may be affecting color purity.
2. Very carefully break the glue seal between the 2-pole purity convergence magnets (PCM), the band and the spacer (see Figure 6-9).

3. Make sure the spacing between the PCM assembly and the CRT stem is $22.5 \text{ mm} \pm 1 \text{ mm}$.
4. Display a red pattern over the entire display area.
5. Adjust the Purity Magnet Rings on the PCM assembly to display a pure green pattern. (Optimal setting: $x = 0.310 \pm 0.015$, $y = 0.592 \pm 0.015$)
6. Repeat steps 4 and 5 using a red pattern and then again, using a blue pattern.

Table 6-3. Color Purity Tolerances

| | | |
|--------|-----------------------|-----------------------|
| Red: | $x = 0.625 \pm 0.015$ | $y = 0.340 \pm 0.015$ |
| Green: | $x = 0.310 \pm 0.015$ | $y = 0.592 \pm 0.015$ |
| Blue: | $x = 0.150 \pm 0.015$ | $y = 0.063 \pm 0.015$ |

(For 9300K white color adjustment:
 $x = 0.283 \pm 0.02$, $y = 0.298 \pm 0.02$)

7. When you have the PCMs properly adjusted, carefully gule them together with Loctite to prevent their movement during shipping.

6-4 Convergence Adjustments

Misconvergence occurs when one or more of the electron beams in a multibeam CRT fail to meet the other beams at a specified point.

Table 6-4. Misconvergence Tolerances

| Position | Error in mm | CRT Dot Pitch |
|------------|-------------|---------------|
| Center (A) | 0.30 | 0.28 |
| Edge (B) | 0.40 | 0.28 |

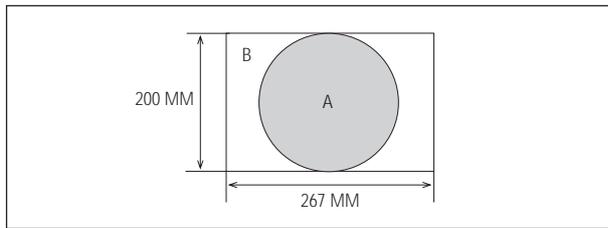

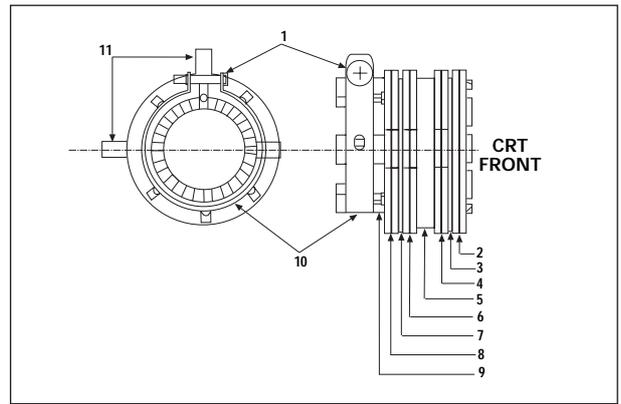

Figure 6-10. Convergence Measurement Areas

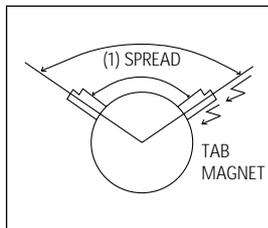

| Toshiba CRT | | | |
|--------------|-----------------|----------|-----------------|
| 1 Setup Bolt | 2 Bow Magnet | 3 Spacer | 4 2-Pole Magnet |
| 5 Band | 6 6-Pole Magnet | 7 Spacer | 8 4-Pole Magnet |
| 9 Holder | 10 Band | 11 Tabs | |

Figure 6-11. Magnet Configuration

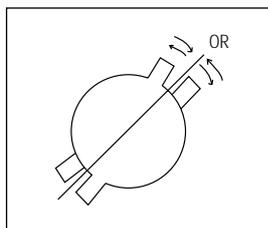

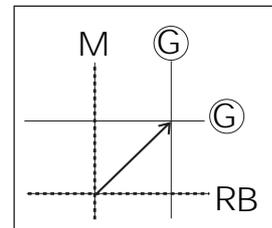

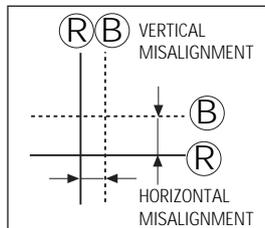

Figure 6-12. Magnet Movements

Red and Blue Alignment (4-pole magnet movement)

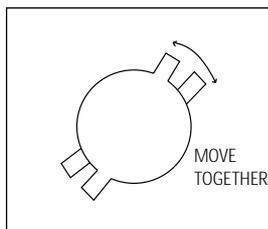

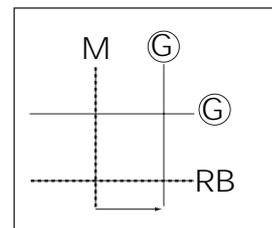

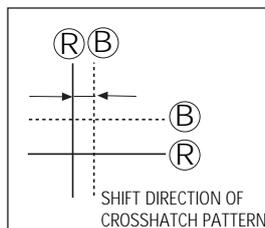

Red, Blue and Green Alignment (6-pole magnet movement)

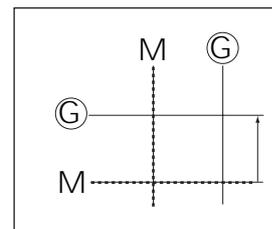

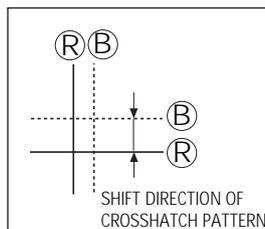

0-Magnetic Field

Motion (1)

Motion (2)

6-4-1 Static (Center) Convergence

Static convergence involves alignment of the red, blue and green lines in the center area of the display.

See "Dynamic Convergence" for alignment of color fields around the edges of the display.

CONDITIONS

Direction: Monitor facing east
 Warm-up: 30 minutes
 Display image: Crosshatch pattern
 Tolerances: See Table 6-5

PROCEDURE

As shown in Figure 6-11, the CRT used in this monitor has the magnet configuration as shown in Table 6-6.

Table 6-5. Magnet Configurations

| CRT Manufacturer | Magnet Order from Front of CRT |
|------------------|---|
| Toshiba | Convergence bow, 2-pole, 6-pole, 4-pole |

Use the following steps to correct any static misconvergence:

1. Locate the pair of 4-pole magnet rings.
2. Unlock the rings and rotate the individual rings (change the spacing between tabs) to converge the vertical red and blue lines.
3. Rotate the pair of rings (maintaining spacing between tabs) to converge the horizontal red and blue lines.
4. After completing the red and blue center convergence adjustment, locate the pair of 6-pole magnet rings.
5. Rotate the individual rings (change the spacing between tabs) to converge the vertical red and blue (magenta) and green lines.
6. Rotate the pair of rings (maintaining the spacing between tabs) to converge the horizontal red and blue (magenta) and green lines. Don't rotate the 2-pole magnets as they adjust for color purity.
7. Mark the correct position for the magnets and apply a small line of glue to hold the magnets in place. Lock the rings in place.

6-4-2 Dynamic (Edge) Convergence

CONDITIONS

Direction: Monitor facing east
 Warm-up: 30 minutes
 Display image: Crosshatch pattern
 Tolerances: See Table 6-5

PROCEDURE

Use the following procedure to correct minor dynamic (edge) misconvergence. If, after using this procedure, dynamic misconvergence is still greater than the tolerance around the periphery of the display area, contact the Regional After Service Center for possible CRT replacement.

1. Make sure the display is not affected by external magnetic fields.
2. Make sure the static convergence is properly adjusted.
3. Strategically place small magnet rubbers on the back of the CRT to correct the misconvergence. Be careful not to remove the paper protecting the adhesive on the magnet rubbers until you are satisfied with their placement and the dynamic convergence.
4. When you are satisfied with the convergence around the edge of the CRT, permanently glue the magnet rubbers to the back of the CRT.

WARNING: Do not remove or change the position of the factory installed wedges. These wedges were installed by the CRT manufacturer and are properly placed for this CRT; their removal may result in damage to the CRT.

6-4-3 Bow Convergence Adjustments

CONDITIONS

- Orientation: Monitor facing east.
- Display Image: Crosshatch pattern with mixed RGB colors.
- Required tools: Philips (+) screwdriver, 1.5 mm Hexkey, 2.5 mm

PROCEDURE

Bow convergence adjustments are not available for the CRTs used in the CHA42*7L/5**7L monitors. While all CRTs have bow convergence magnets, they are sealed in the CRT factory and are not user or service technician adjustable. Do not touch these magnets (see Figure 6-11). If bow convergence adjustment is out of alignment, replace the CRT.

Bow misconvergence should not exceed the values listed in Table 6-5: Misconvergence Tolerances.

6-4-4 Balance Convergence Adjustments

Balance Convergence involves alignment of red and blue lines when they are misaligned at one end more so than at the other end. The Deflection Yoke holds the balance coils which can correct balance misconvergences.

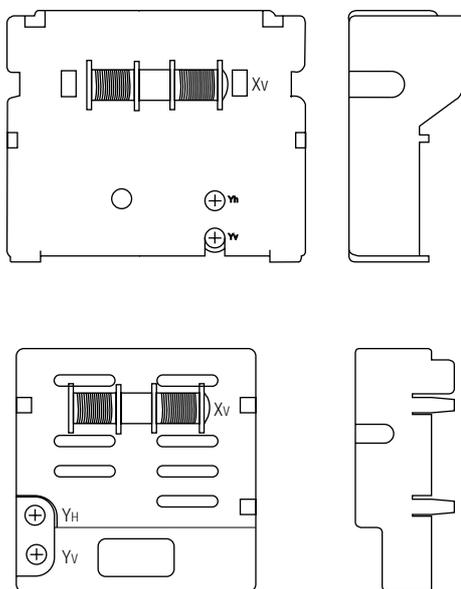

Figure 6-13. Deflection Yoke Caps

6-4-4 (a) HORIZONTAL LINE RED AND BLUE BALANCE CONVERGENCE

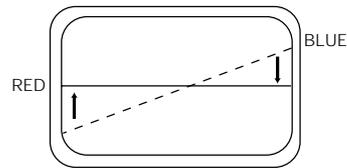

Figure 6-14. Horizontal Line Balance Misconvergence

PROCEDURE

Use a 2.5 mm hexkey at the Horizontal Balance Coil (Xv). Turning it right raises the right end of the blue line and lowers the left end. Turning the VR to the left lowers the right end of the blue line and raises the left end.

6-4-4 (b) VERTICAL RED AND BLUE BALANCE CONVERGENCE

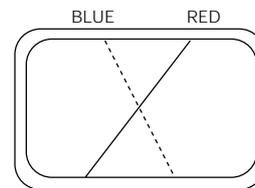

Figure 6-15. Vertical Line Balance Misconvergence

PROCEDURE

Use a 1.5 mm phillips (+) screwdriver at the YH variable resistor. Turning the VR to the left tilts the blue line to the right. Turning it right tilts the blue line to the left.

6-4-4 (c) UPPER AND LOWER HORIZONTAL LINE CONVERGENCE

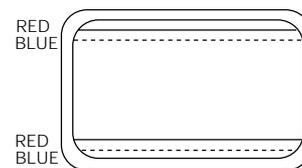

Figure 6-16. Upper and Lower Balance Misconvergence

PROCEDURE

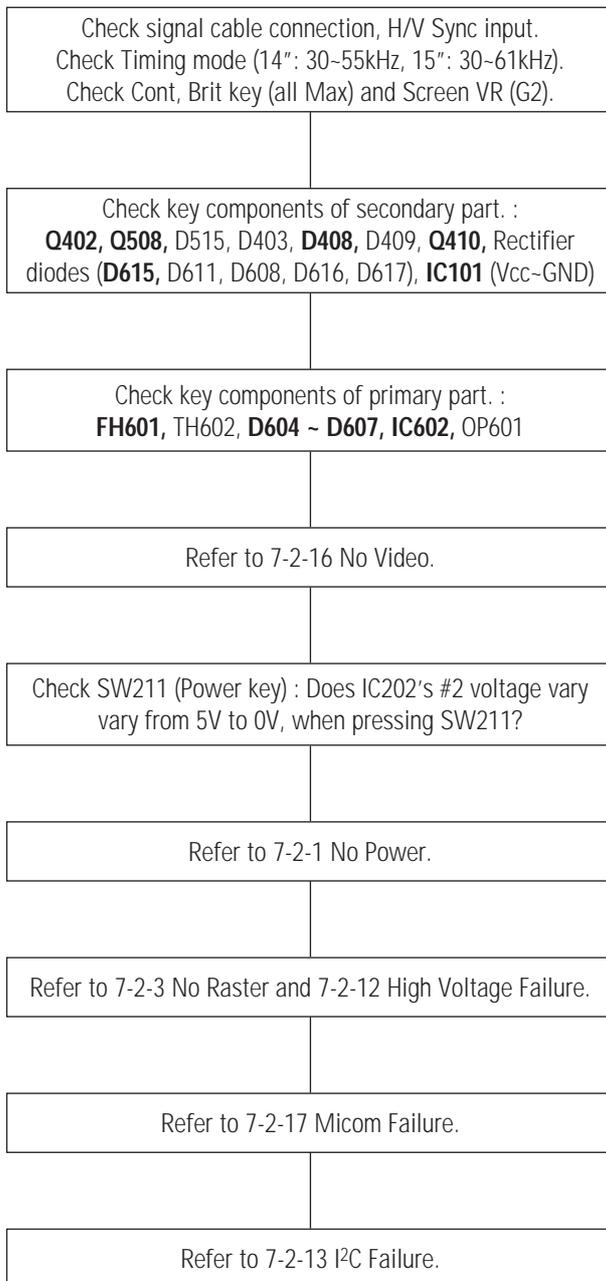

Use a 1.5 mm phillips (+) screwdriver at the Yv variable resistor. Turning the VR to the left moves the blue line at the top upward and at the bottom, the line moves downward. Turning it right moves the blue line at the top downward and at the bottom the line moves upward.

7 Troubleshooting

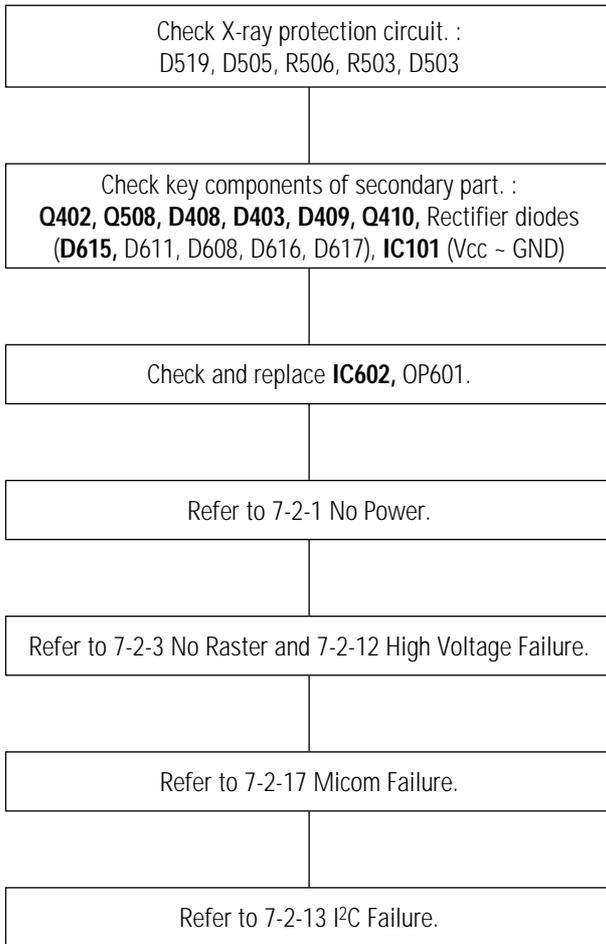

7-1 General Troubleshooting

- Notes:**
1. If a picture does not appear, fully rotate the brightness and contrast controls clockwise and reinspect.
 2. Check the following circuits.
 - No raster appears: Power circuit, Horizontal output circuit, H/V control circuit, and H/V output circuit.
 - High voltage develops but no raster appears: Video output circuits.
 - High voltage does not develop: Horizontal output circuits.

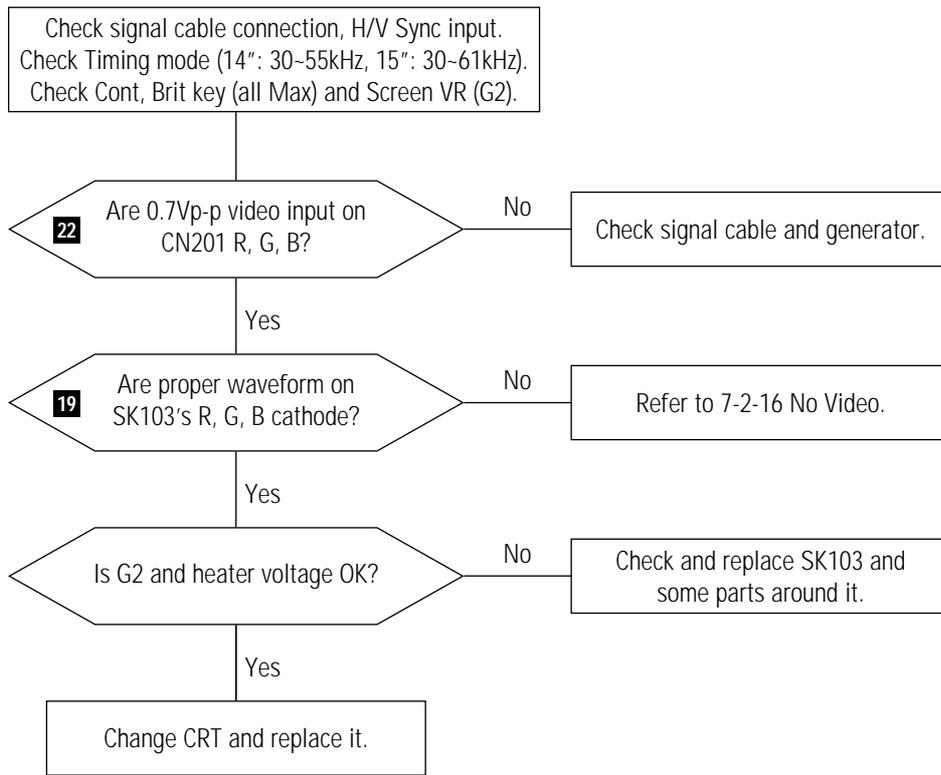

7-1-1 No Picture

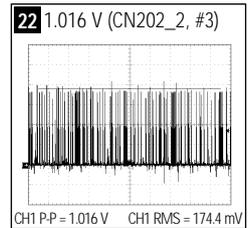

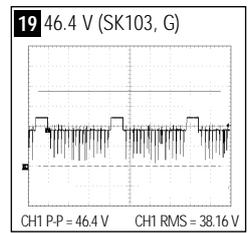

7-1-2 Shut Down

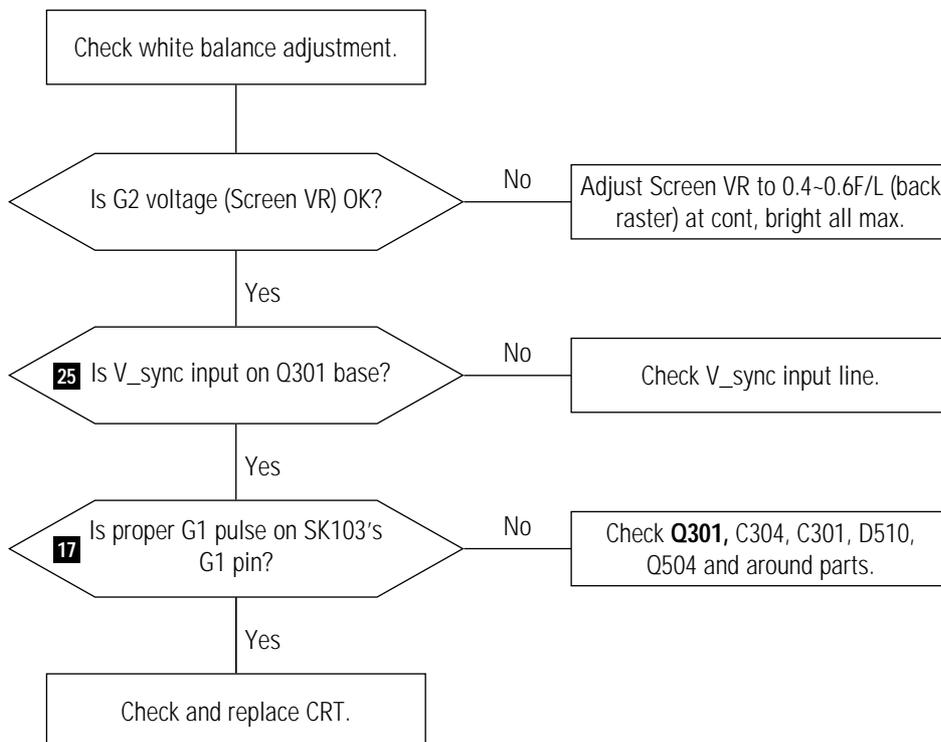

7-1-3 No Video or Missing Colors

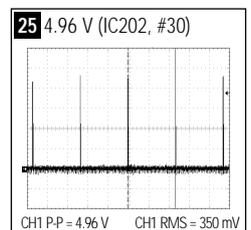

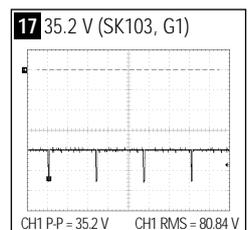

WAVEFORMS

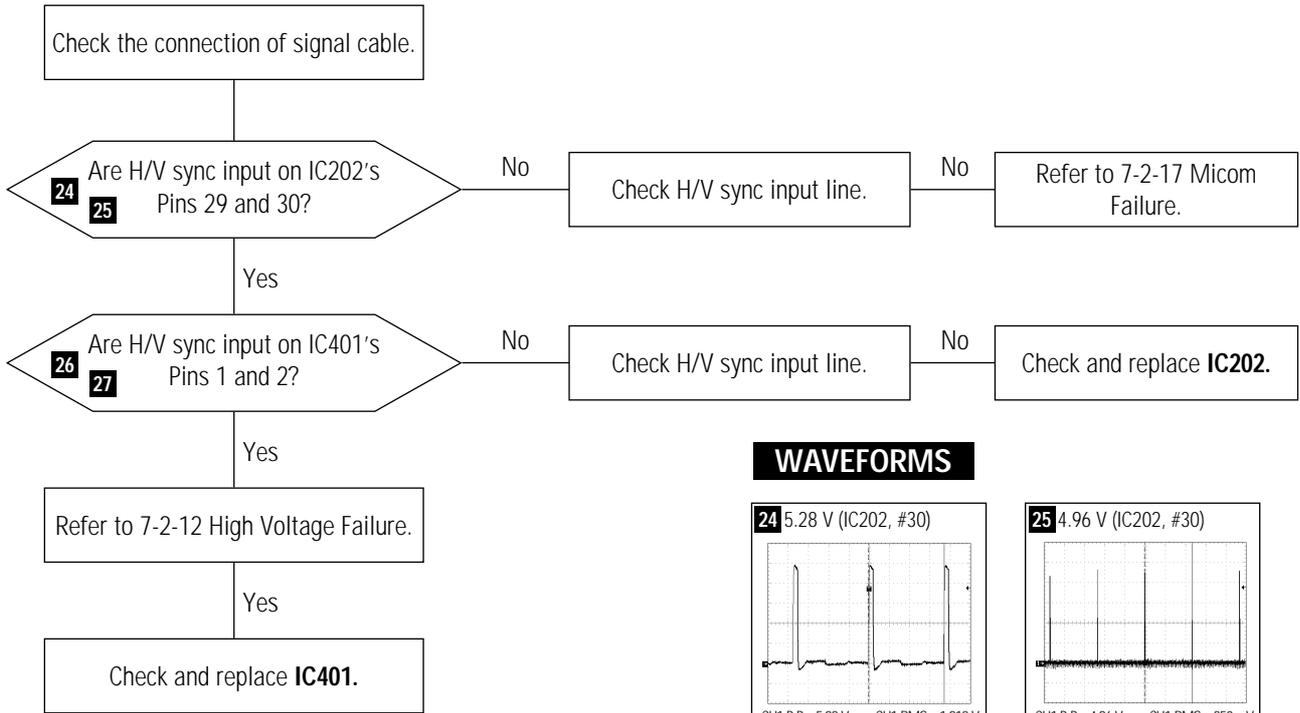

7-1-4 Visible Retrace

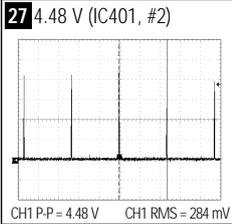

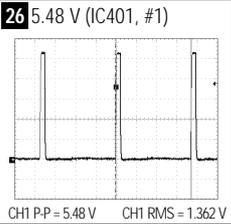

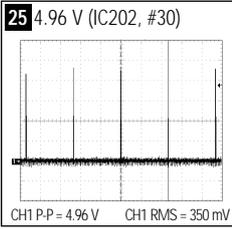

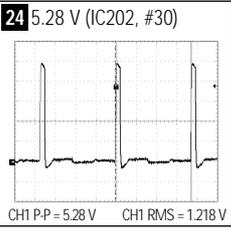

WAVEFORMS

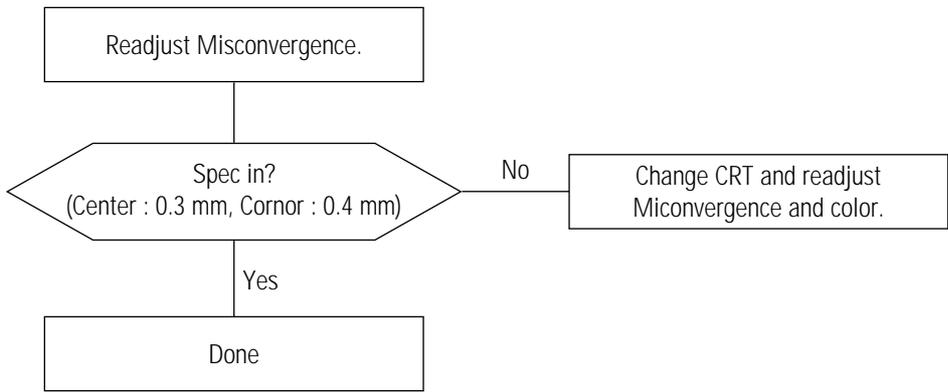

7-1-5 Unsynchronized image

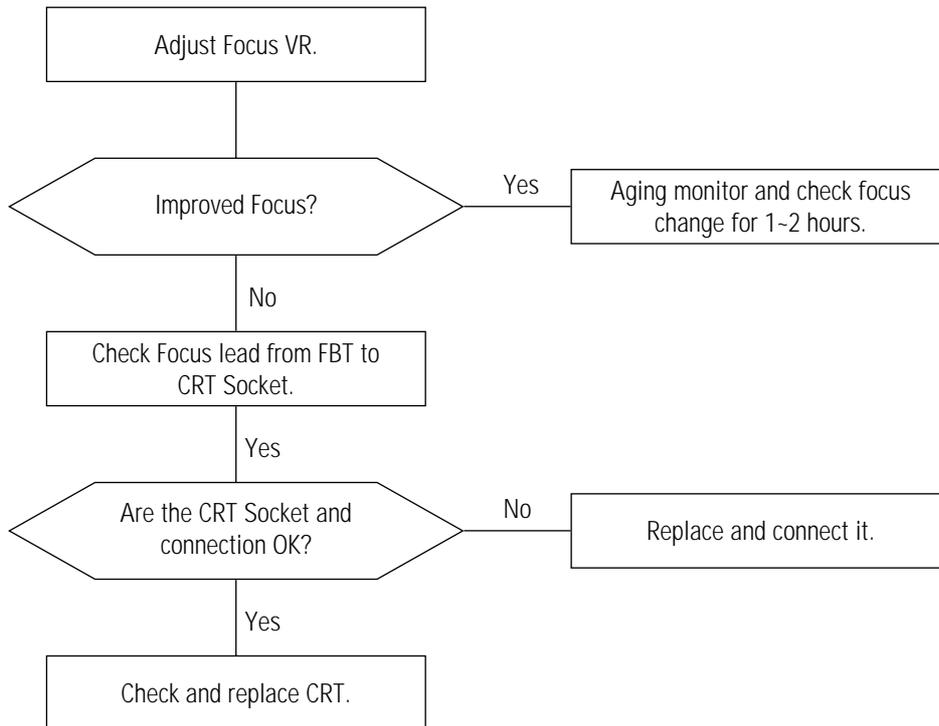

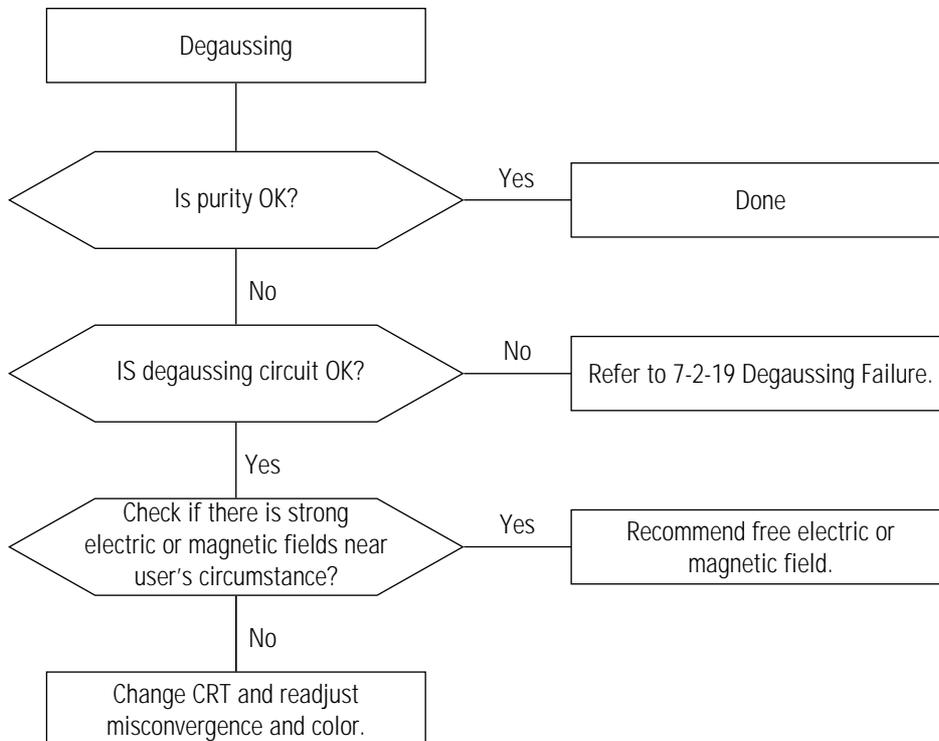

WAVEFORMS

7-1-6 Misconvergence

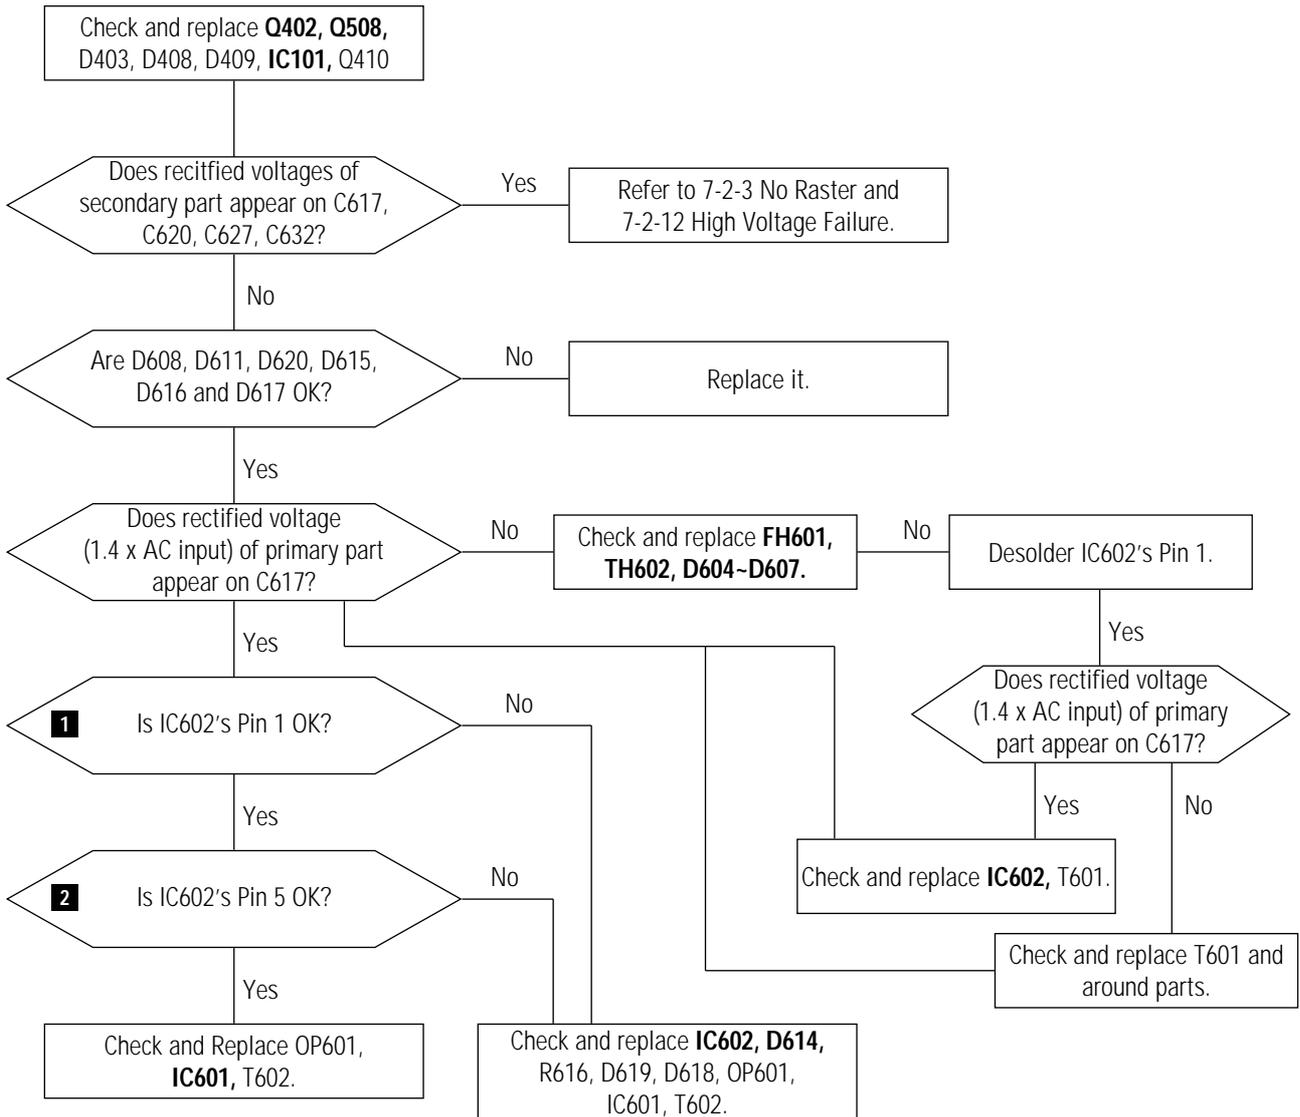

7-1-7 Poor Focus**7-1-8 Purity Failure**

7-2 Detail Repair Section

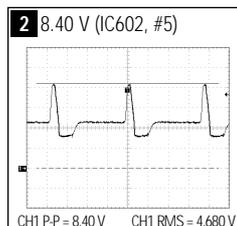

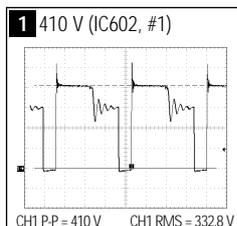

Notes: 1. If a picture does not appear

- check first
- if AC power cord is plugged or not,
 - if signal cable is connected or not,
 - if signal generator (PC) is operated well or not (DPMS mode)
 - if the Timing mode is out of spec or not (14": 30-55 kHz, 15": 30-61 kHz)

7-2-1 No Power

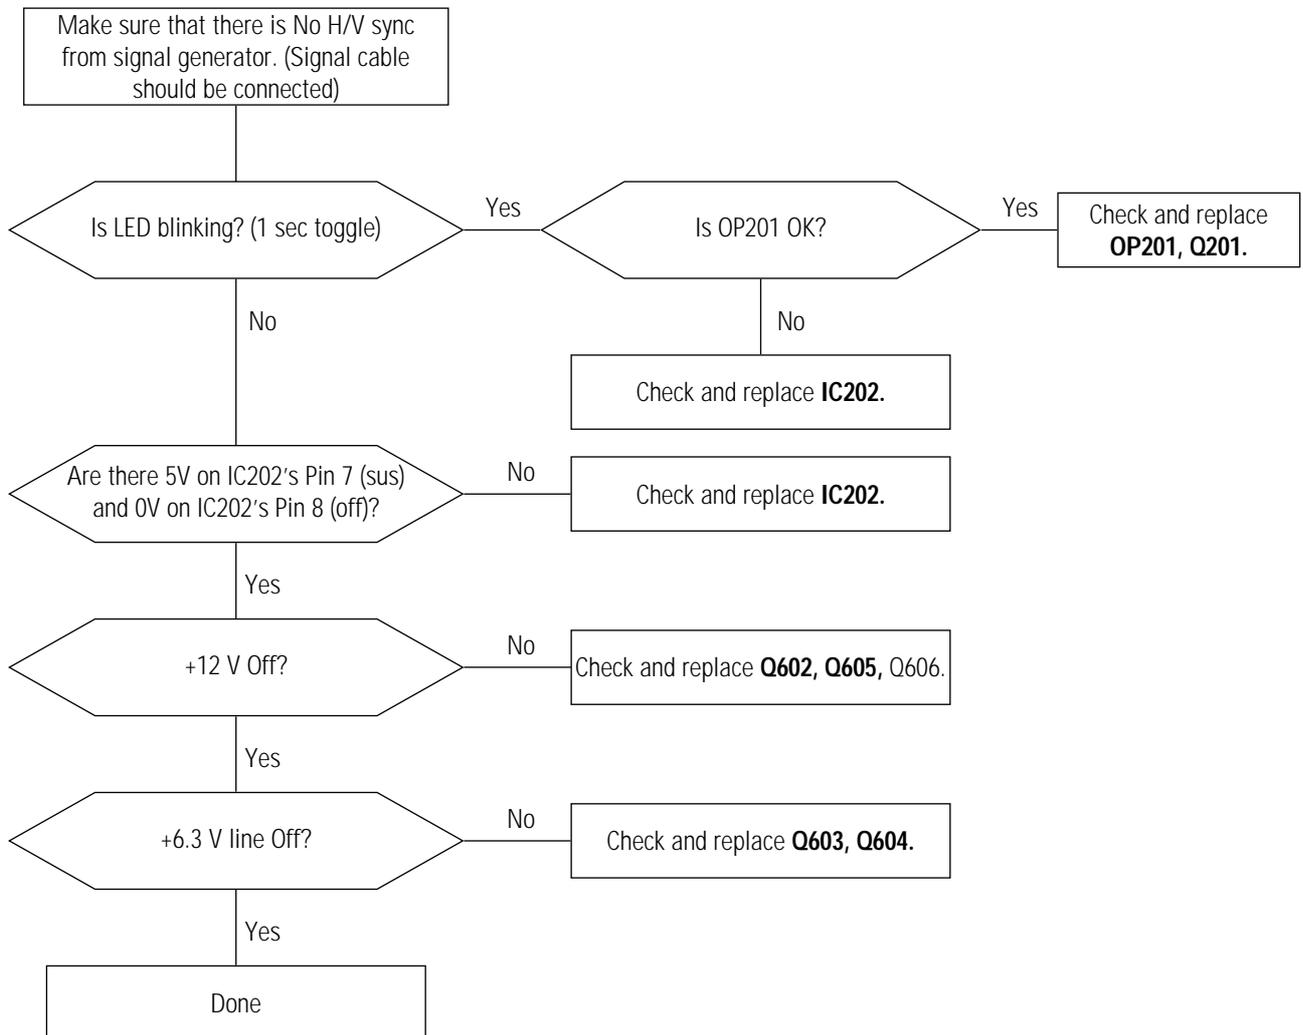

WAVEFORMS

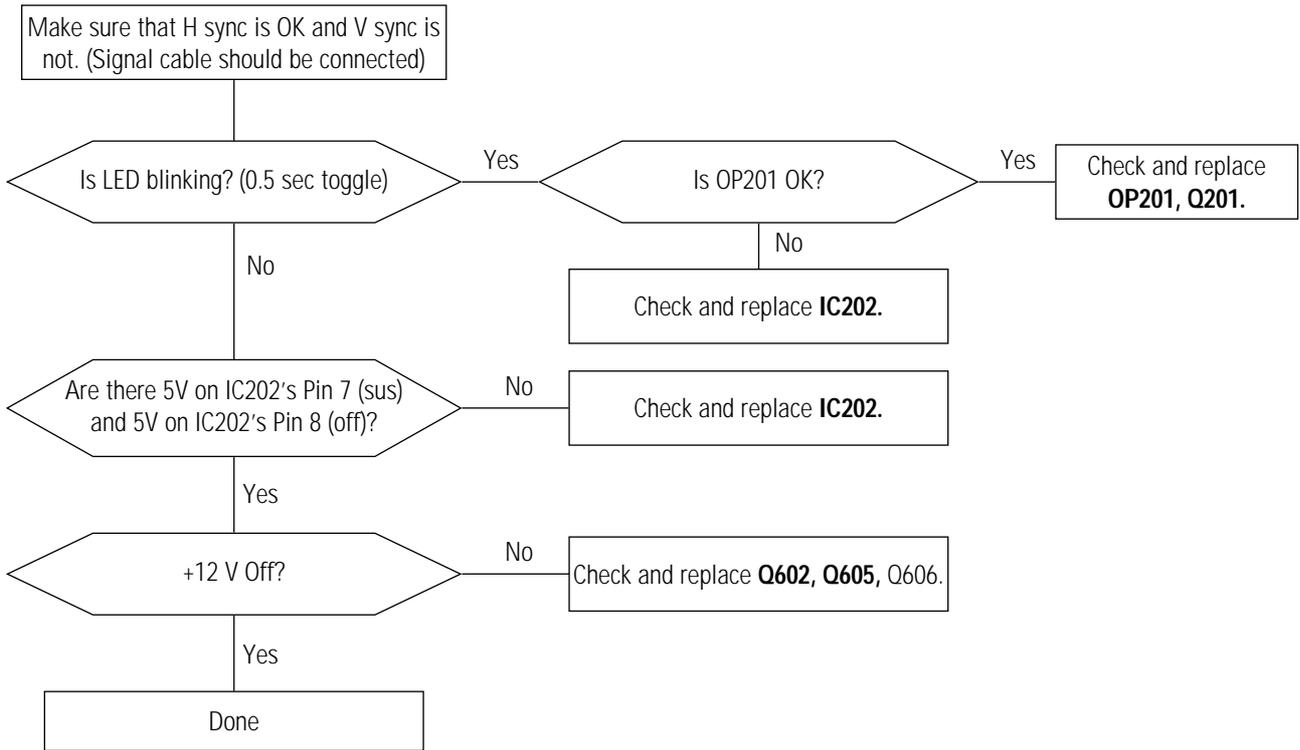

7-2-2 DPMS Failure

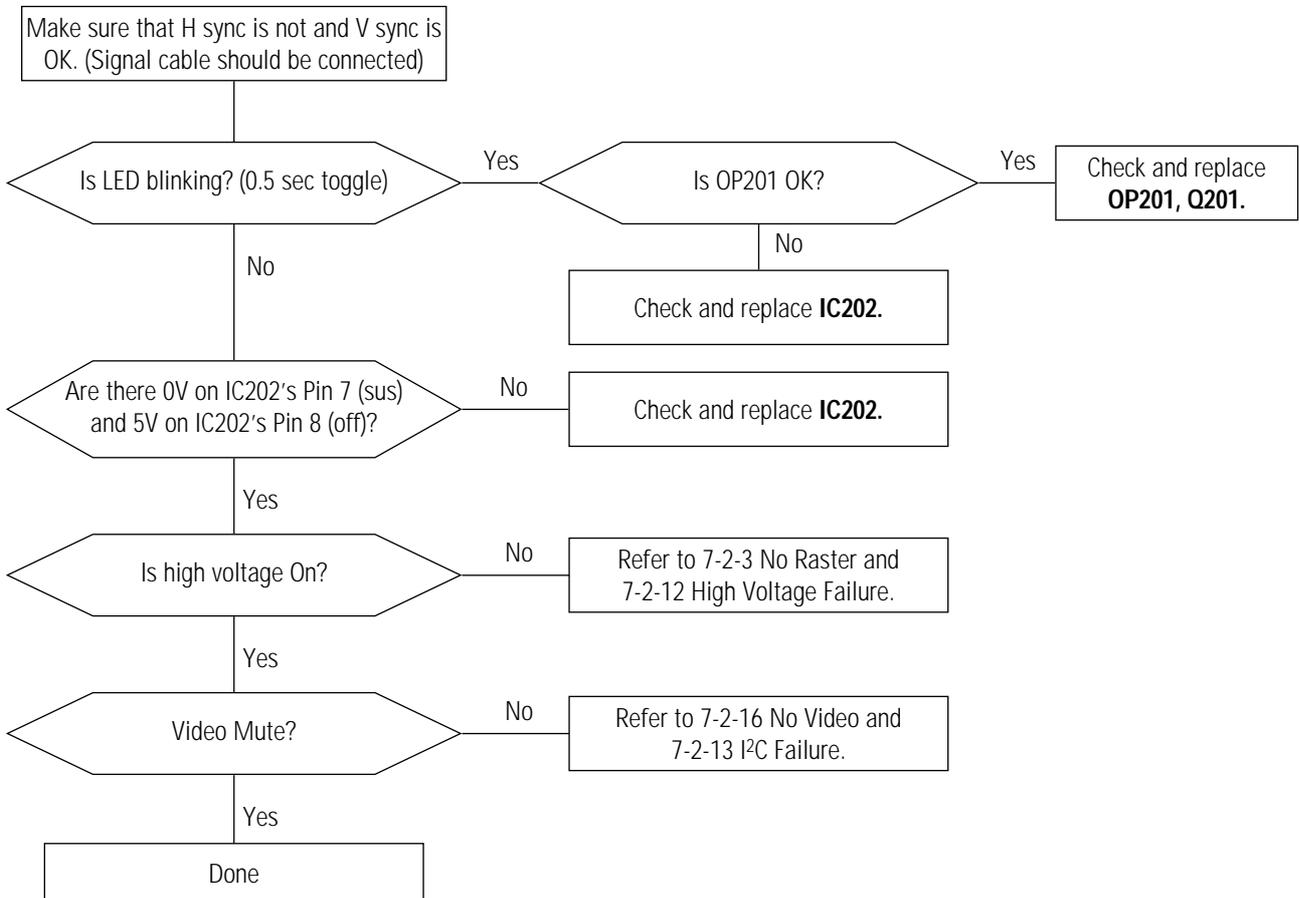

7-2-2 (a) Off Mode (No H/V sync)

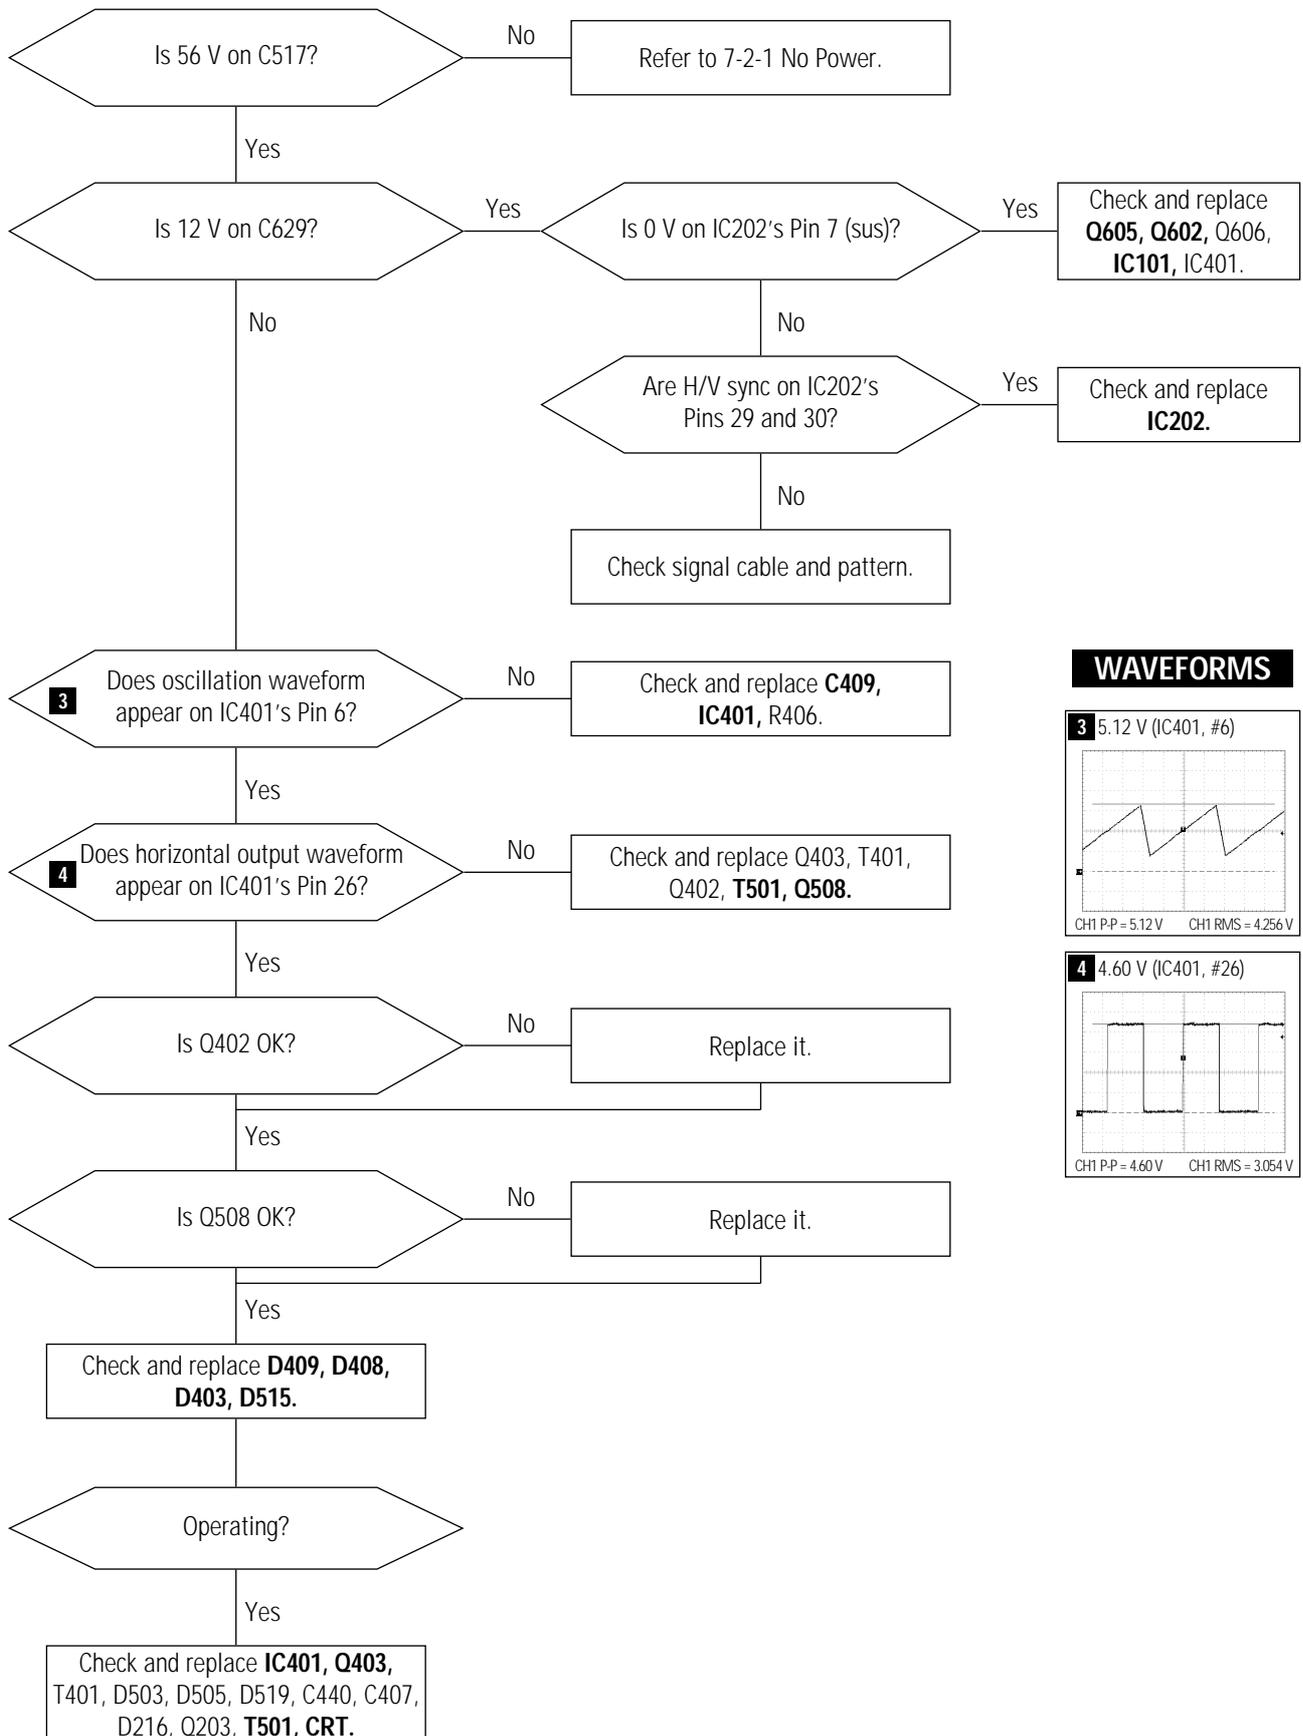

7-2-2 (b) Suspend Mode (H sync: OK, V sync: No)

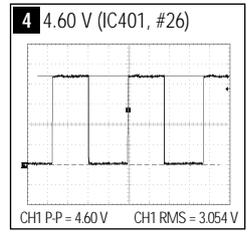

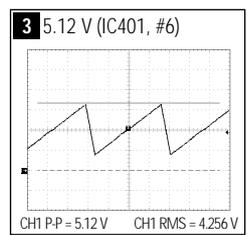

7-2-2 (c) Stand-by Mode (H sync: No, V sync: OK)

7-2-3 No Raster : No Raster means (Power: OK, High Voltage: No)

WAVEFORMS

7-2-4 S-correction Failure

Symptoms: Poor Horizontal linearity
 – Corner: wide, Center: narrow or
 – Corner: narrow, Center: wide

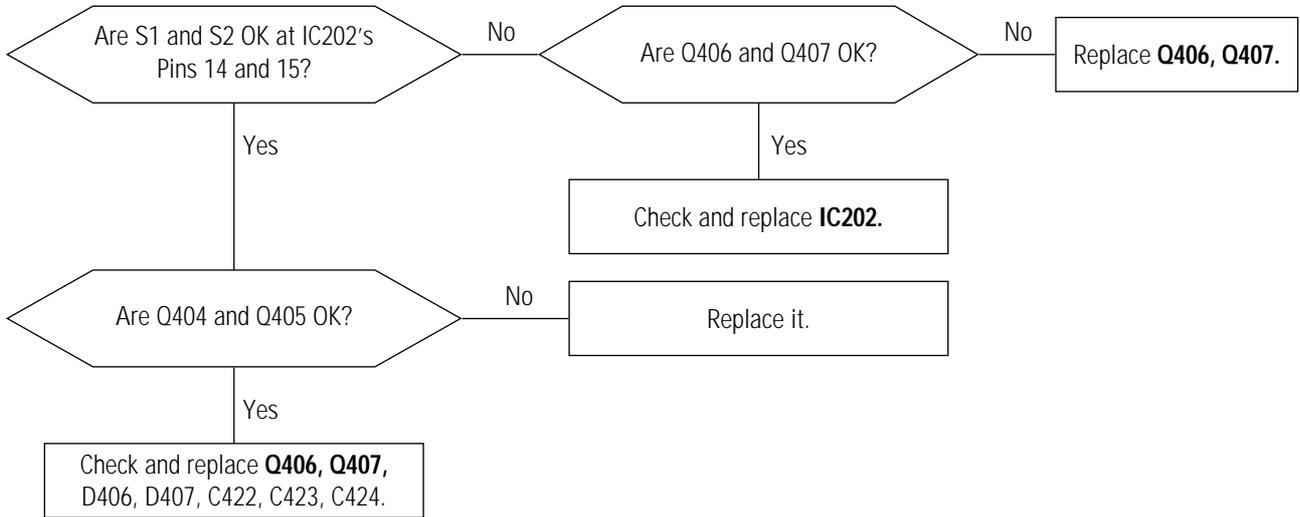

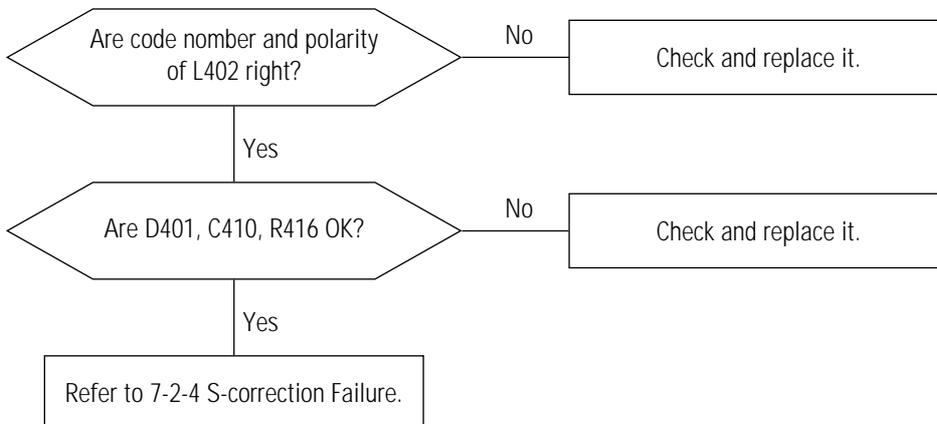

Table 7-1.

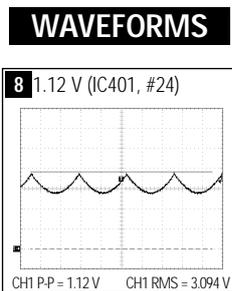

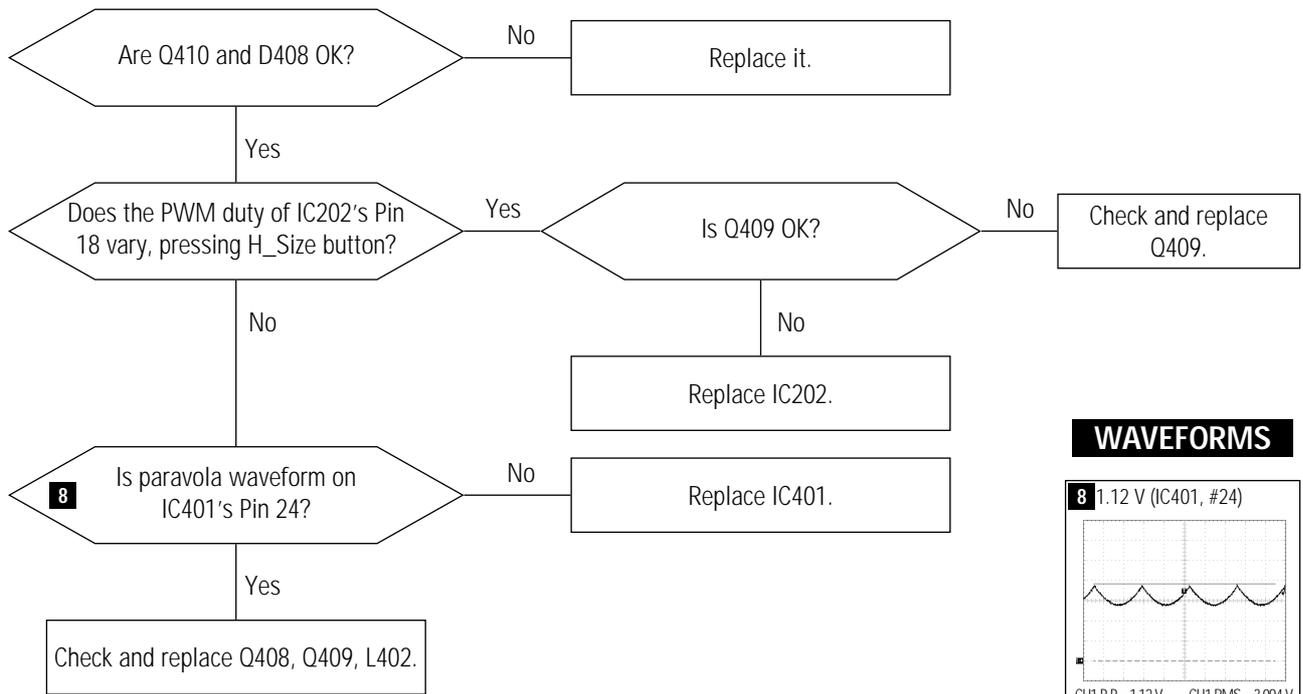

| | 31 ~ 36 | 36 ~ 41 | 41 ~ 50 | 50 ~ 61 |
|----|---------|---------|---------|---------|
| S1 | 0 V | 0 V | 5 V | 5 V |
| S2 | 0 V | 5 V | 0 V | 5 V |

* As CRT vendor and inch, there are differential items like L401, C422, C423, C424, R426, R212. If you want to change a PCB board to another one that is for different CRT and inch, you have to change differential items at schematic diagram.

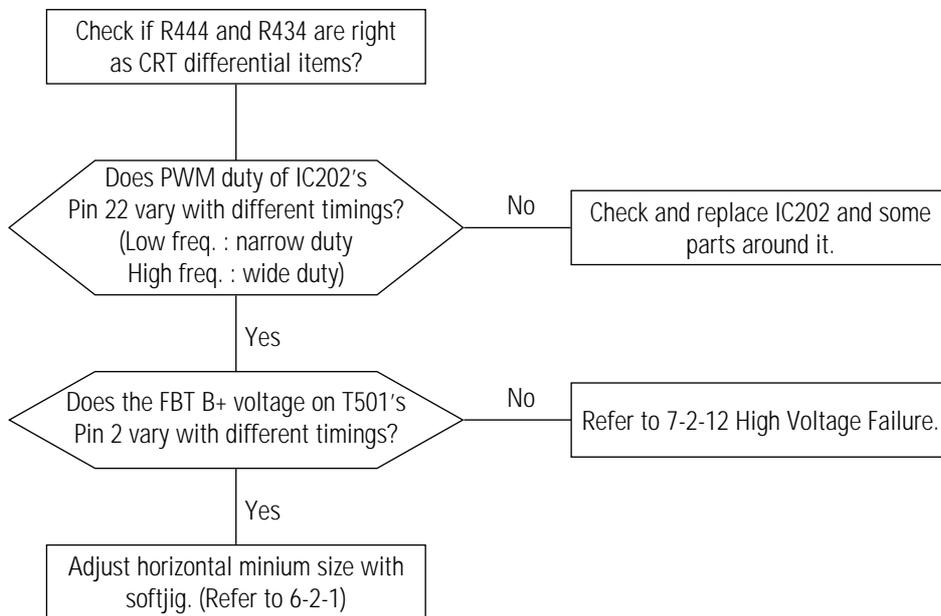

7-2-5 H-Linearity Failure

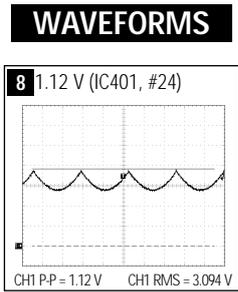

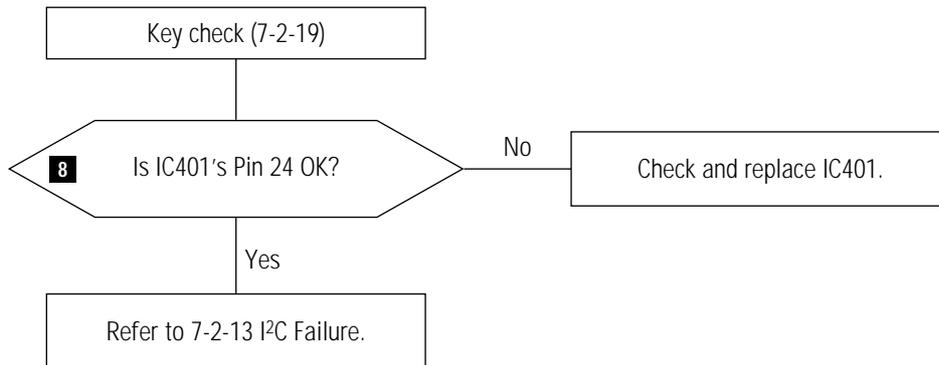

7-2-6 Invariable H_Size

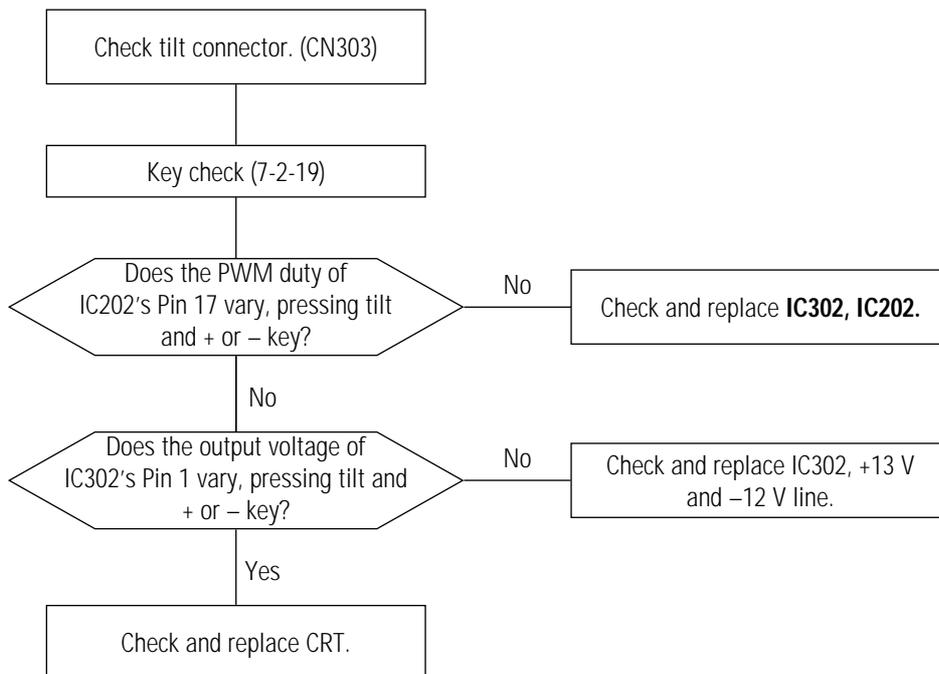

7-2-7 Abnormal H_Size

7-2-8 S_Pin, Trap, Para, V_Lin, Pin_Bal Failure

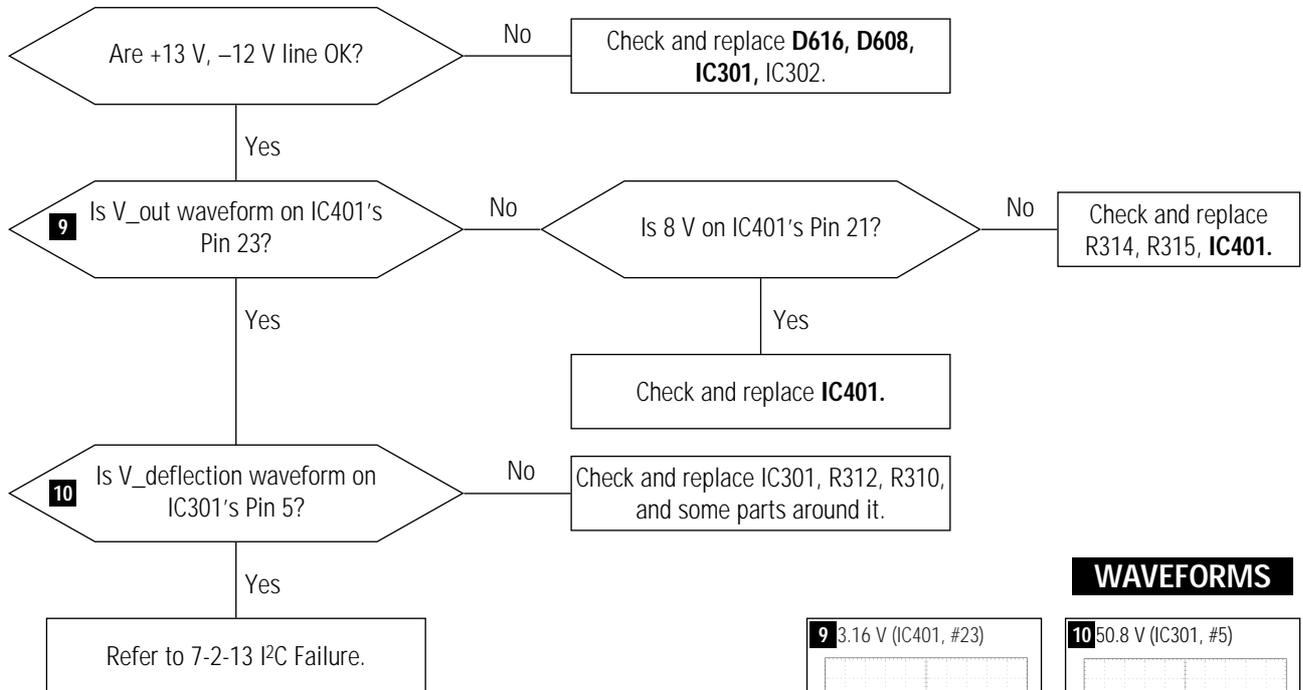

7-2-9 Tilt Failure

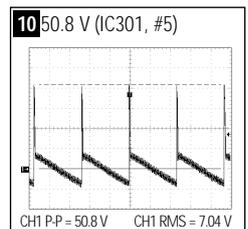

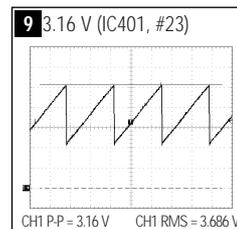

7-2-10 Vertical Deflection Failure

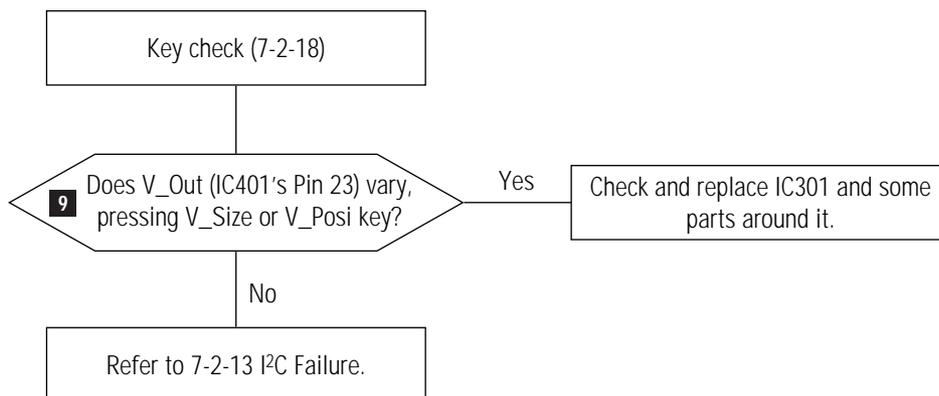

Symptoms: – One horizontal line
– Rainbow color, No Video

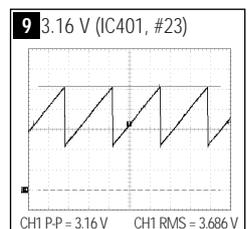

WAVEFORMS

7-2-11 Invariable V_Size or V_Position

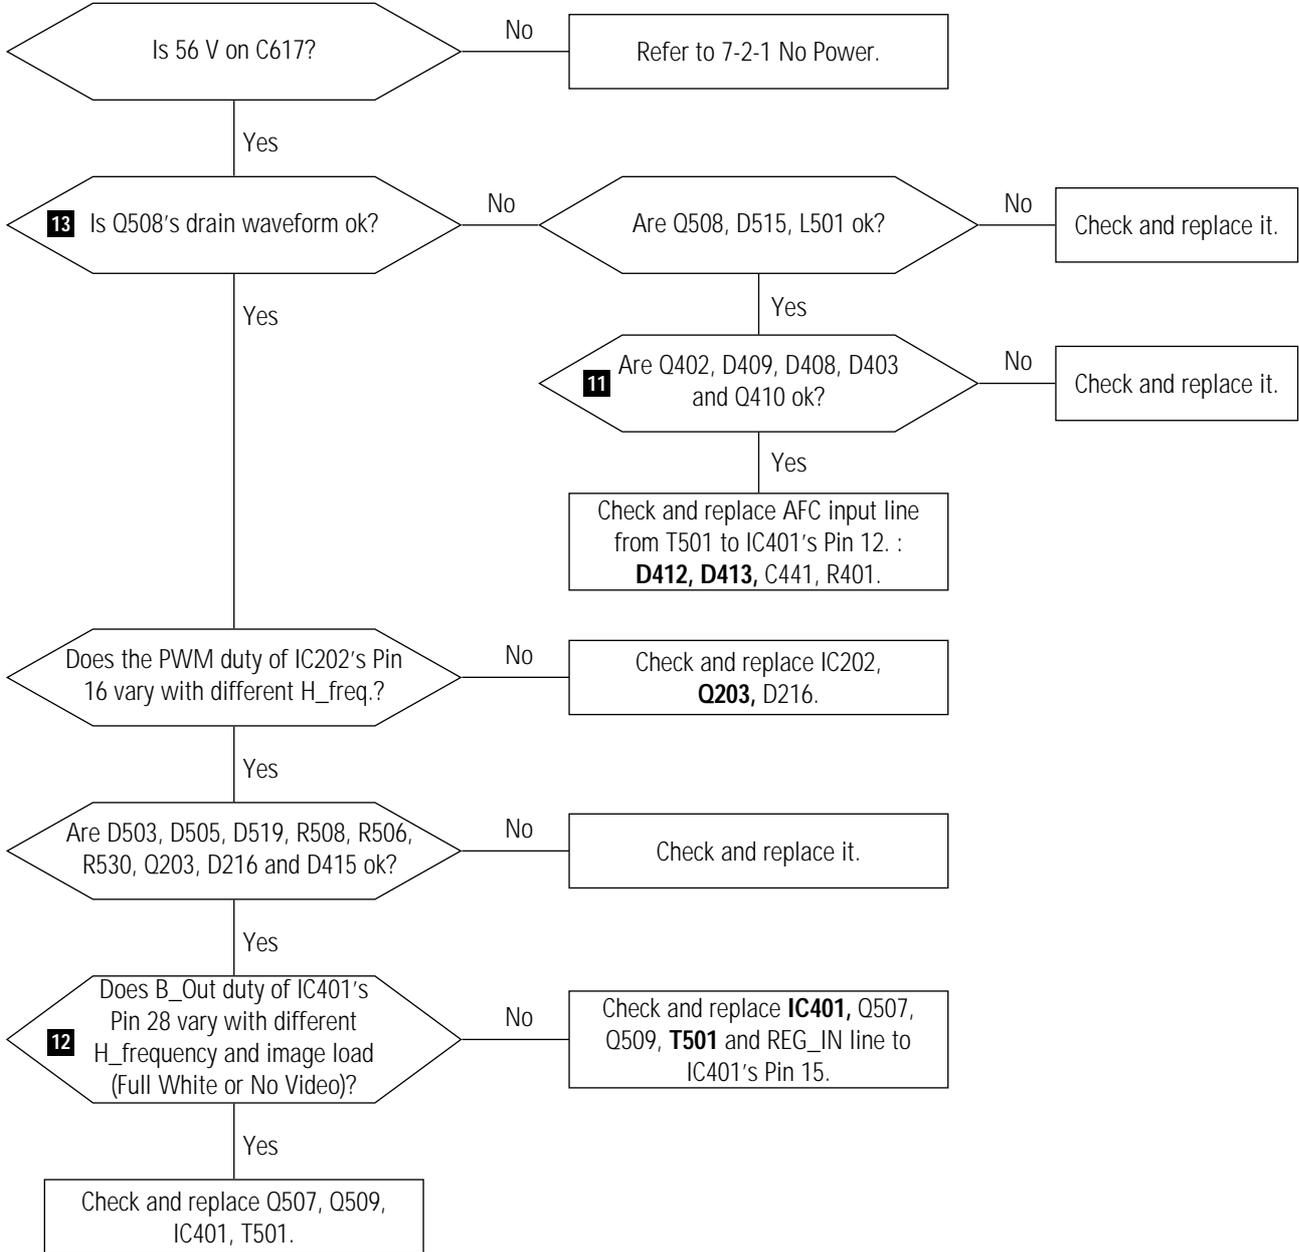

WAVEFORMS

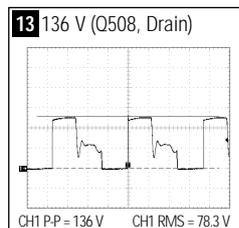

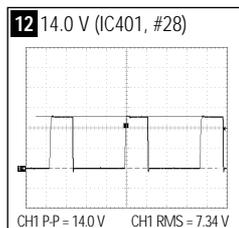

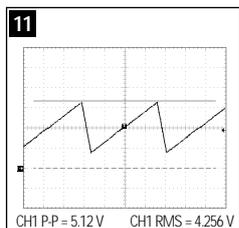

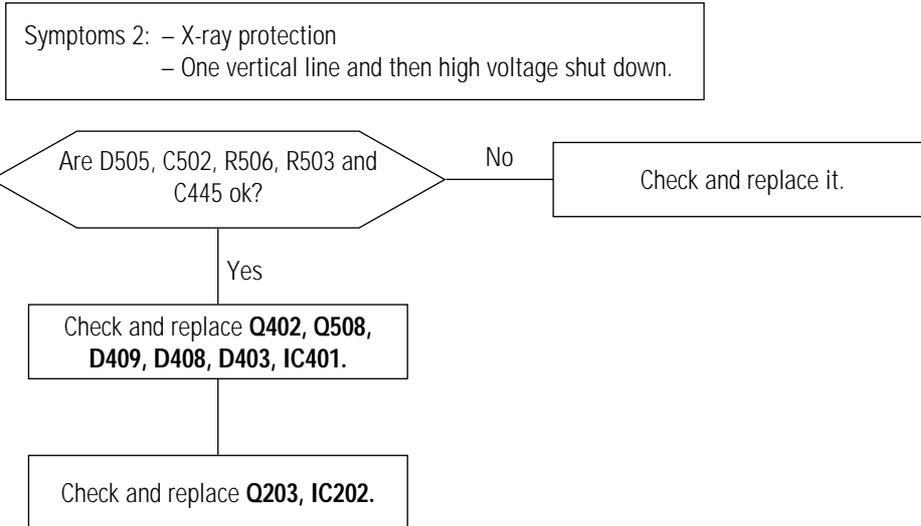

7-2-12 High Voltage Failure

Symptoms 1: – No Power
 – No Raster
 – Unstable operation (Fixed FBT B+ voltage with different H_frequency, Over 31 kHz: whistle sound, Narrow H_Size, Unsynchronized image, 31 kHz: OK)

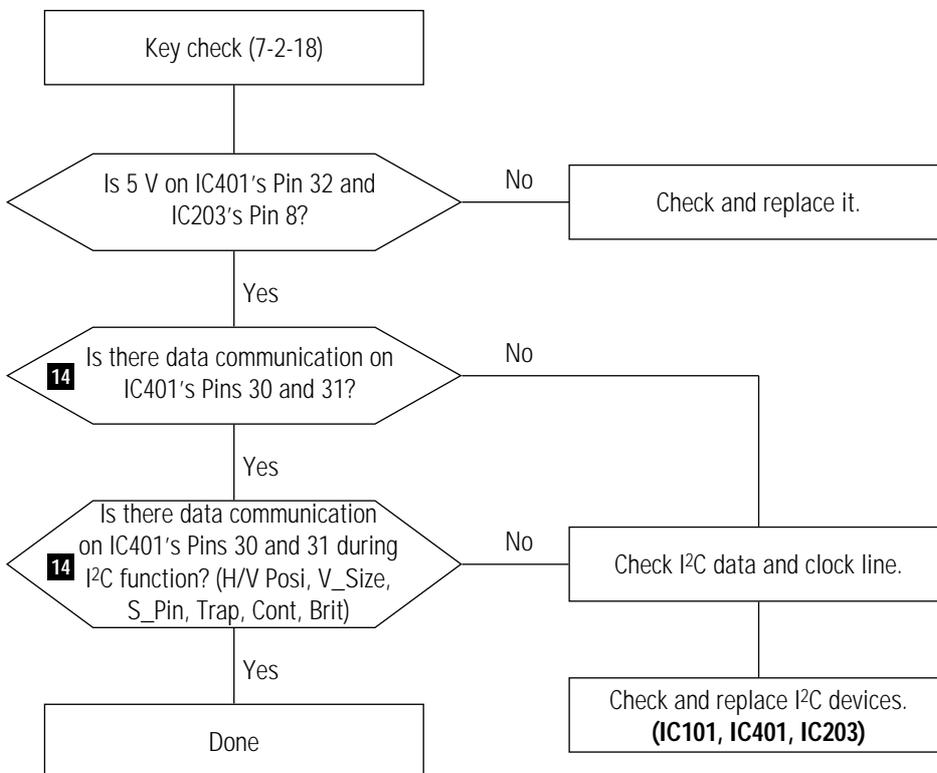

WAVEFORMS

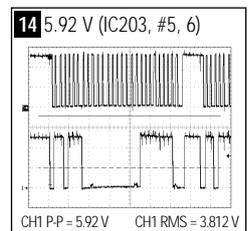

7-2-13 I²C Failure

– Almost data (Horizontal drive duty, FBT B+ duty, display image data, color data) is transferred from IC203 to IC101 and IC401 through I²C data line during power on.
– After user adjusts display image data, contrast and brightness data, these are saved to IC203.

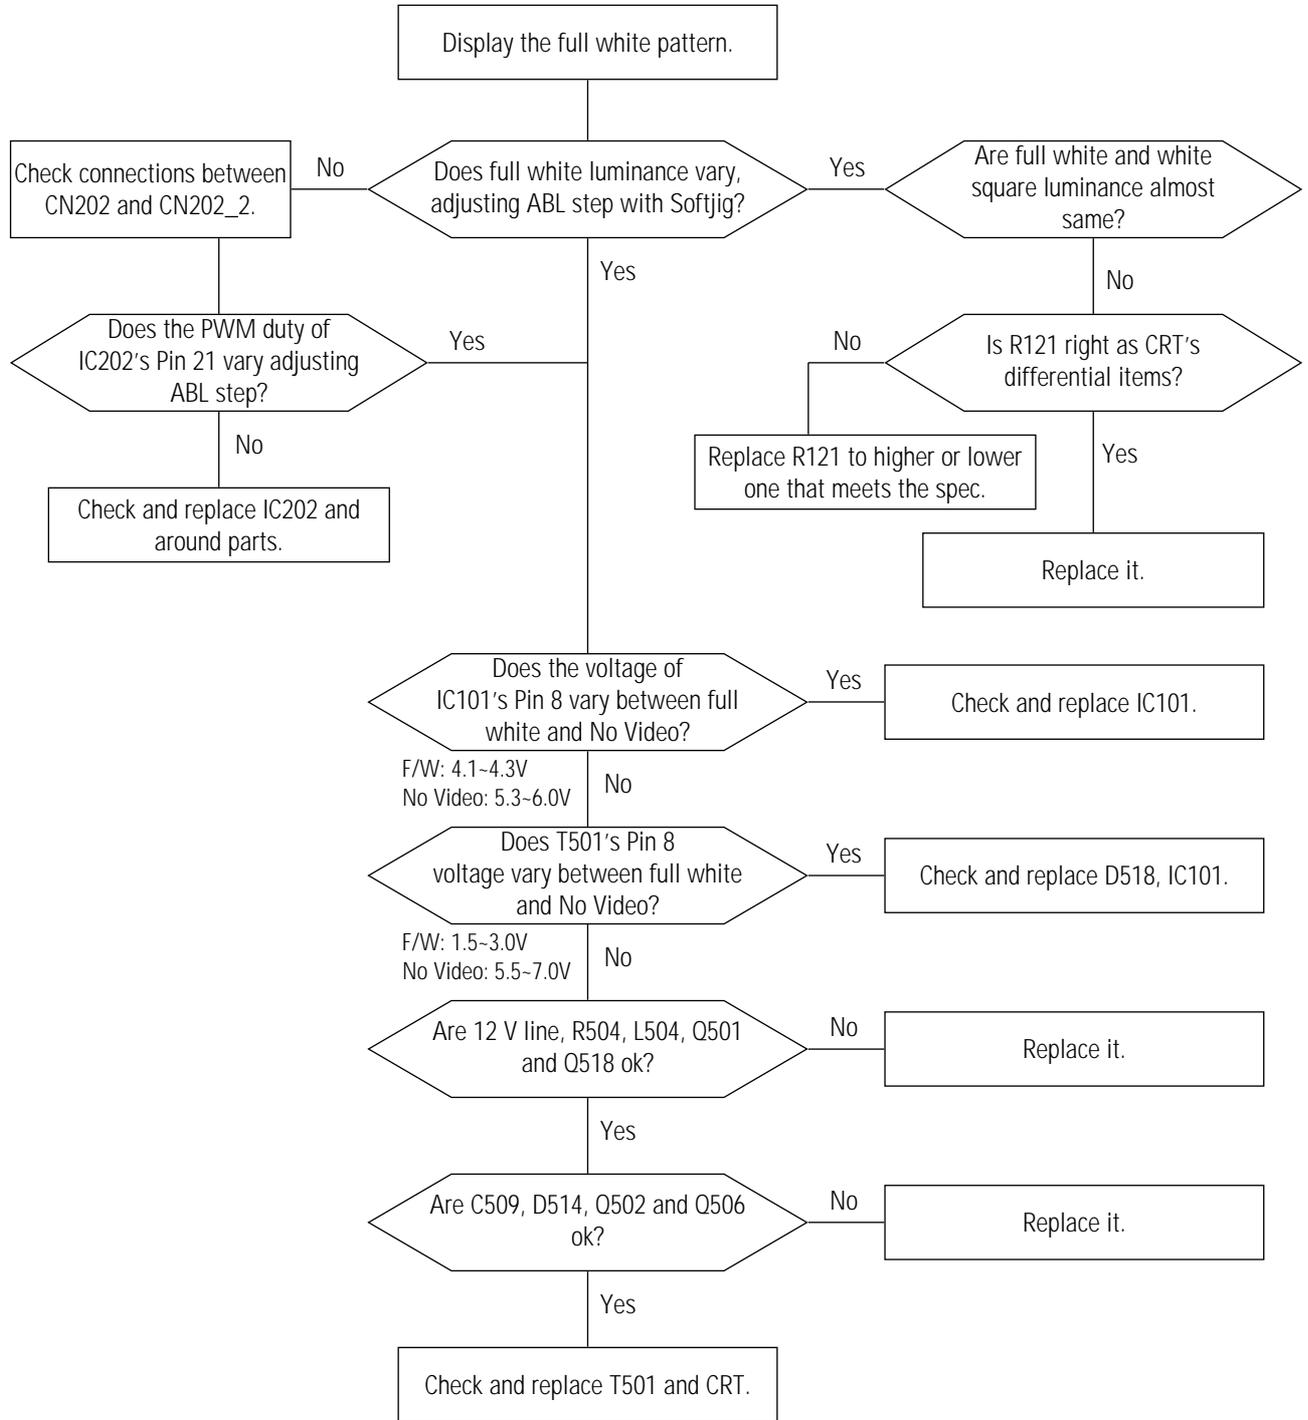

WAVEFORMS

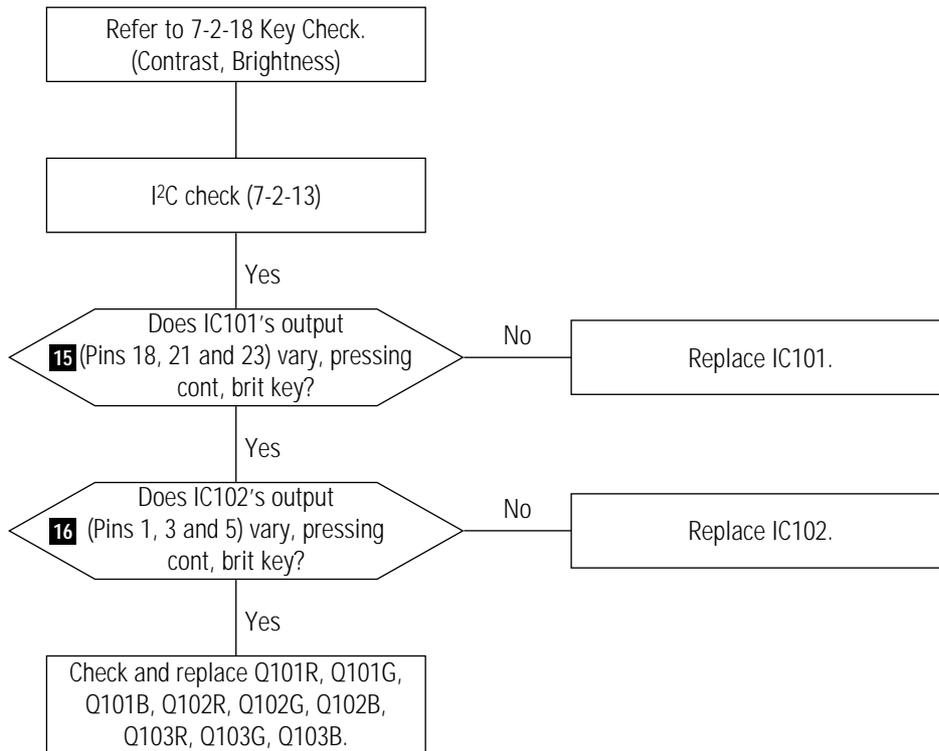

CH1 : IC401's Pin 31
CH2 : IC401's Pin 30

7-2-14 ABL Failure

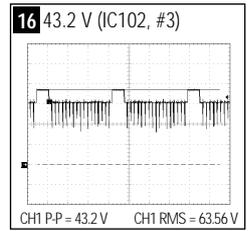

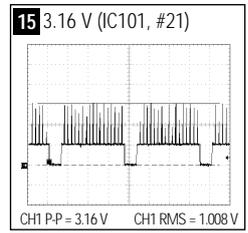

Symptoms : – Full white luminance is too bright. (ABL minium is over 35 F/L)
 – Full white luminance is too dark. (ABL maximum is under 35 F/L)
 – The luminance of full white and No Video are almost same.

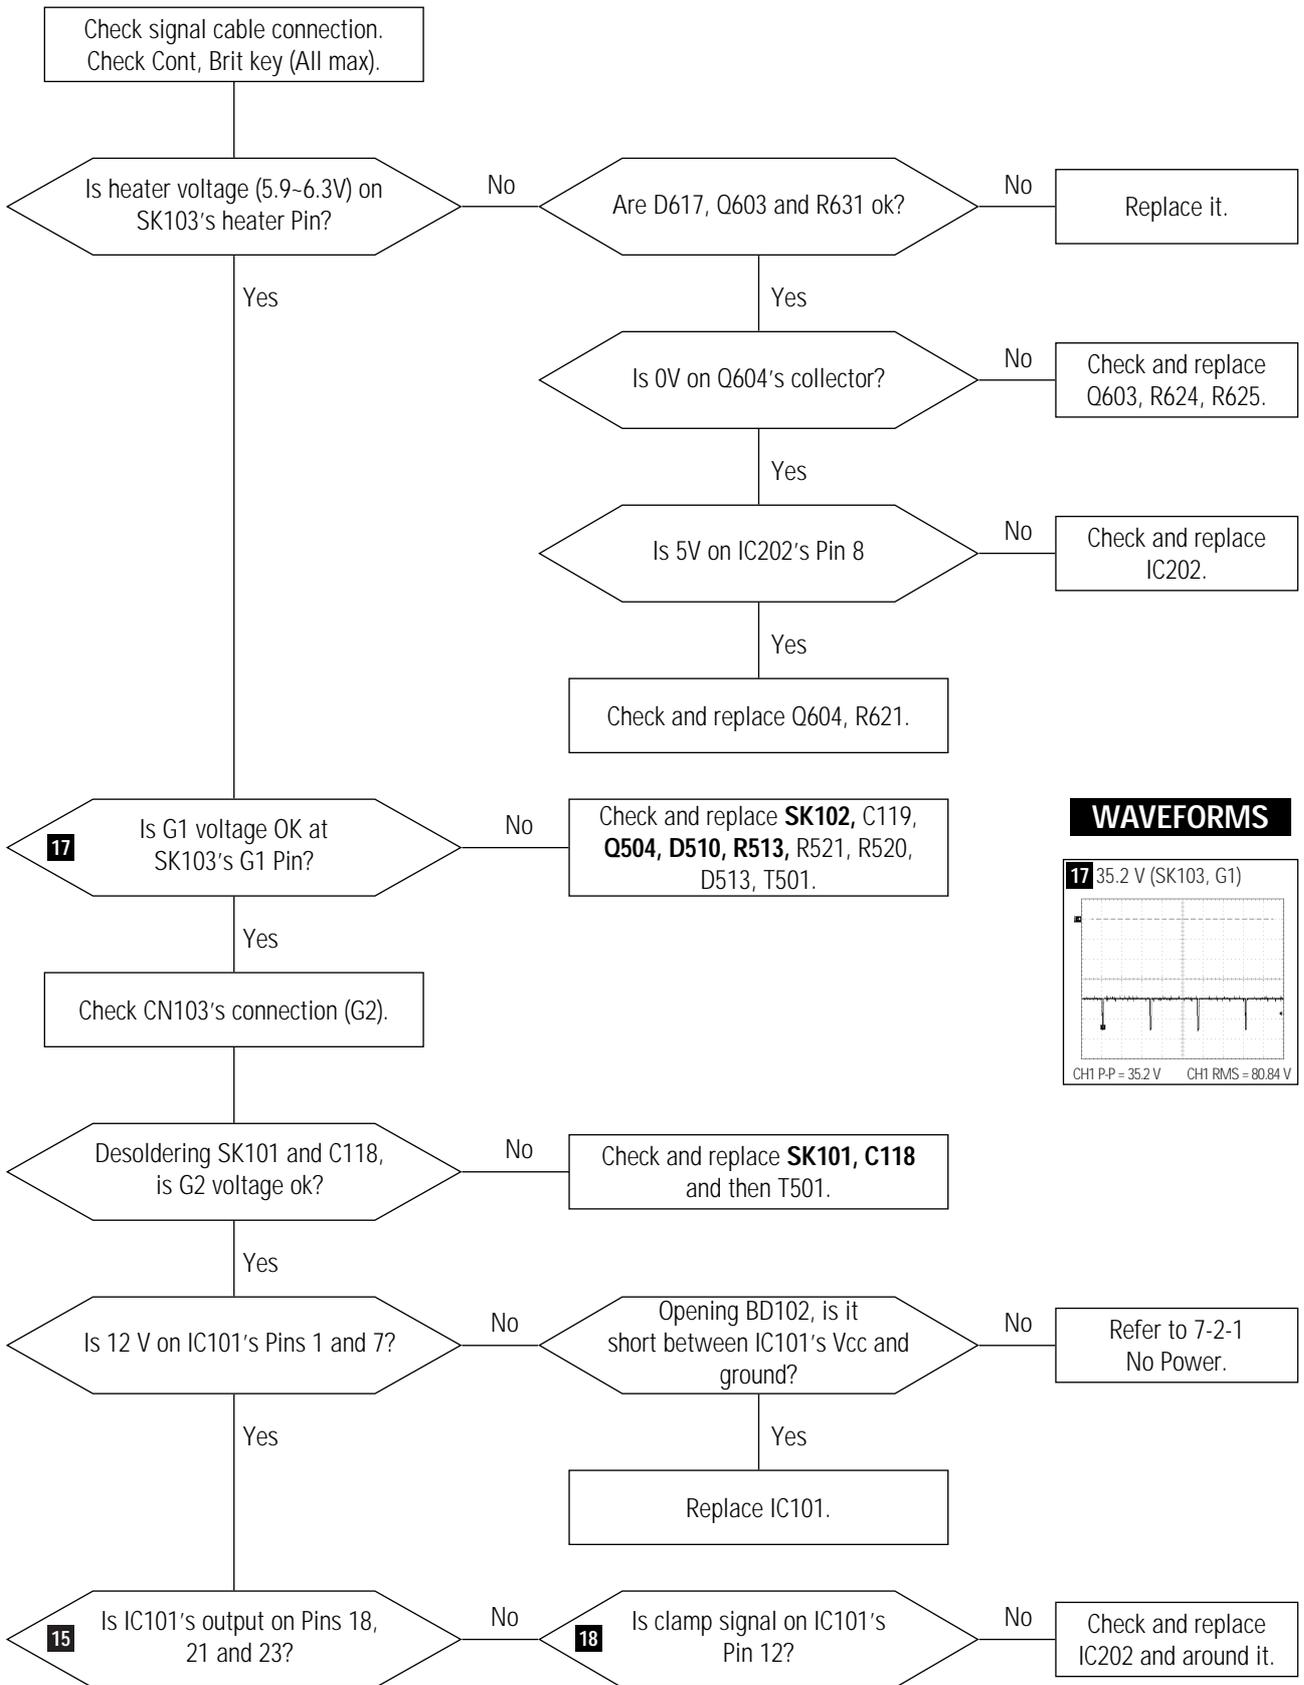

7-2-15 Invariable Contrast, Brightness Control
