## IMPORTANT SAFETY NOTICE

Proper service and repair is important to the safe, reliable operation of all Funai Equipment. The service procedures recommended by Funai and described in this service manual are effective methods of performing service operations. Some of these service special tools should be used when and as recommended.

It is important to note that this service manual contains various CAUTIONS and NOTICES which should be carefully read in order to minimize the risk of personal injury to service personnel. The possibility exists that improper service methods may damage the equipment. It also is important to understand that these CAUTIONS and NOTICES ARE NOT EXHAUSTIVE. Funai could not possibly know, evaluate and advise the service trade of all conceivable ways in which service might be done or of the possible hazardous consequences of each way. Consequently, Funai has not undertaken any such broad evaluation. Accordingly, a servicer who uses a service procedure or tool which is not recommended by Funai must first use all precautions thoroughly so that neither his safety nor the safe operation of the equipment will be jeopardized by the service method selected.

## SPECIFICATIONS

Description	Unit	Minimum	Nominal	Maximum	Condition
<b>1. Video</b>					
1-1. Video Output	Vp-p	0.8	1.0	1.2	
1-2. Video S/N Y	dB	40	45		
1-3. Video Color S/N AM	dB	35	44		
1-4. Video Color S/N PM	dB	31	38		
1-5. resolution	Line	230	240		
<b>2. Servo</b>					
2-1. Jitter Low	μsec		0.04	0.12	
2-2. Wow & Flutter	%		0.2	0.6	
<b>3. Normal Audio</b>					
3-1. Output	dBv	-10	-6	-2	
3-2. S/N	dB	36	40		
3-3. Distortion	%		1.5	4.0	
3-4. Freq. response (R/P) 200Hz (-20dB ref. 1kHz)	dB	-6	-3		
8kHz	dB	-6	-2		

Note: Nominal specs represent the design specs. All units should be able to approximate these – some will exceed and some may drop slightly below these specs. Limit specs represent the absolute worst condition that still might be considered acceptable; In no case should a unit fail to meet limit specs.

# IMPORTANT SAFETY PRECAUTIONS

## Product Safety Notice

Some electrical and mechanical parts have special safety-related characteristics which are often not evident from visual inspection, nor can the protection they give necessarily be obtained by replacing them with components rated for higher voltage, wattage, etc. Parts that have special safety characteristics are identified by a symbol on schematics and in parts lists. Use of a substitute replacement that does not have the same safety characteristics as the recommended replace-

ment part might create shock, fire, and/or other hazards. The Product's Safety is under review continuously and new instructions are issued whenever appropriate. Prior to shipment from the factory, our products are carefully inspected to confirm with the recognized product safety and electrical codes of the countries in which they are to be sold. However, in order to maintain such compliance, it is equally important to implement the following precautions when a set is being serviced.

## Precautions during Servicing

- A. Parts identified by the symbol are critical for safety.  
Replace only with part number specified.
- B. In addition to safety, other parts and assemblies are specified for conformance with regulations applying to spurious radiation. These must also be replaced only with specified replacements.  
Examples: RF converters, RF cables, noise blocking capacitors, and noise blocking filters, etc.
- C. Use specified internal wiring. Note especially:
  - 1) Wires covered with PVC tubing
  - 2) Double insulated wires
  - 3) High voltage leads
- D. Use specified insulating materials for hazardous live parts. Note especially:
  - 1) Insulation tape
  - 2) PVC tubing
  - 3) Spacers
  - 4) Insulators for transistors
- E. When replacing AC primary side components (transformers, power cord, etc.), wrap ends of wires securely about the terminals before soldering.
- F. Observe that the wires do not contact heat producing parts (heatsinks, oxide metal film resistors, fusible resistors, etc.).
- G. Check that replaced wires do not contact sharp edges or pointed parts.
- H. When a power cord has been replaced, check that 4-5 kg of force in any direction will not loosen it.
- I. Also check areas surrounding repaired locations.
- J. Use care that foreign objects (screws, solder droplets, etc.) do not remain inside the set.
- K. When connecting or disconnecting the internal connectors, first, disconnect the AC plug from the AC outlet.

## Safety Check after Servicing

Examine the area surrounding the repaired location for damage or deterioration. Observe that screws, parts, and wires have been returned to their original positions. Afterwards, do the following tests and confirm the specified values to verify compliance with safety standards.

### 1. Clearance Distance

When replacing primary circuit components, confirm specified clearance distance ( $d$ ) and ( $d'$ ) between soldered terminals, and between terminals and surrounding metallic parts. (See Fig. 1)

**Table 1 : Ratings for selected area**

AC Line Voltage	Region	Clearance Distance (d) (d')
220 to 240 V	Europe or Australia	$\geq 4 \text{ mm}(d)$ $\geq 6 \text{ mm}(d')$

**Note:** This table is unofficial and for reference only.  
Be sure to confirm the precise values.

### 2. Leakage Current Test

Confirm the specified (or lower) leakage current between B (earth ground, power cord plug prongs) and externally exposed accessible parts (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.) is lower than or equal to the specified value in the table below.

#### Measuring Method (Power ON) :

Insert load Z between B (earth ground, power cord plug prongs) and exposed accessible parts. Use an AC voltmeter to measure across the terminals of load Z. See Fig. 2 and the following table.

**Table 2 : Leakage current ratings for selected areas**

AC Line Voltage	Region	Load Z	Leakage Current (i)	Earth Ground (B) to:
220 to 240 V	Europe or Australia	2k $\Omega$ RES. Connected in parallel	i $\leq 0.7\text{mA}$ AC Peak i $\leq 2\text{mA}$ AC	RF or Antenna terminals
		50k $\Omega$ RES. Connected in parallel	i $\leq 0.7\text{mA}$ AC Peak i $\leq 2\text{mA}$ AC	A/V Input, Output

**Note:** This table is unofficial and for reference only.  
Be sure to confirm the precise values.

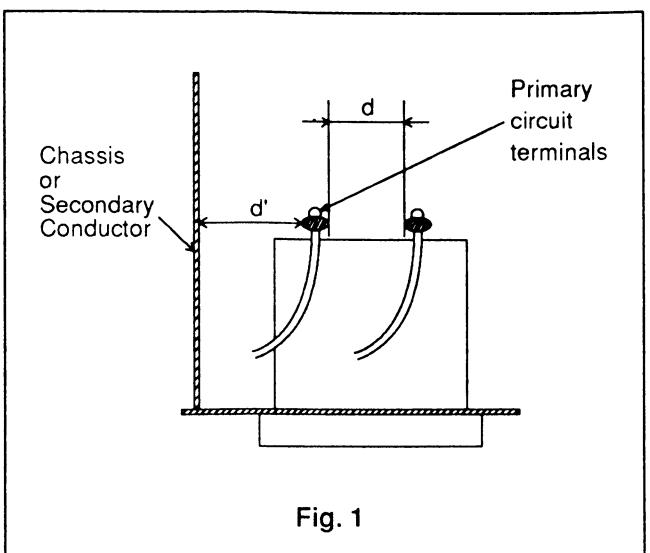

Fig. 1

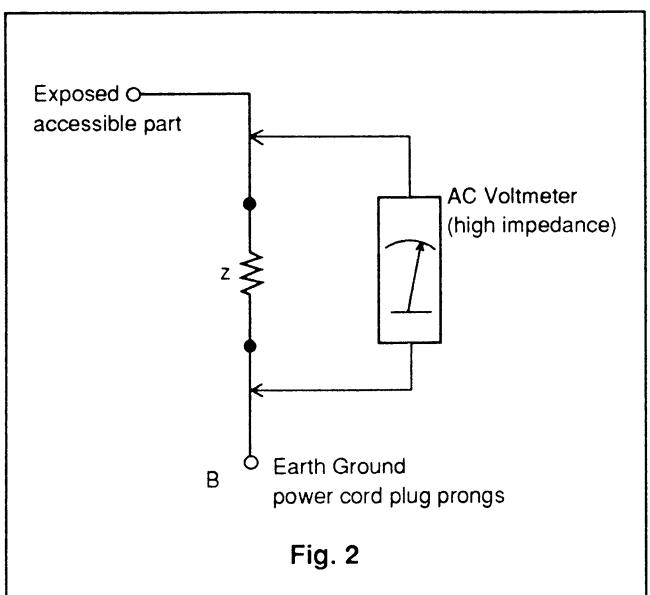

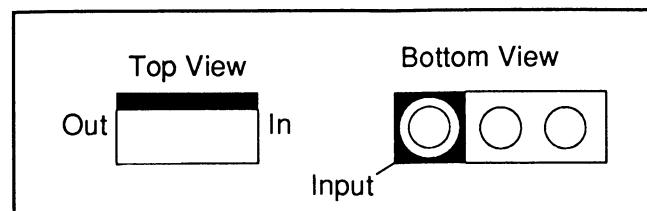

Fig. 2

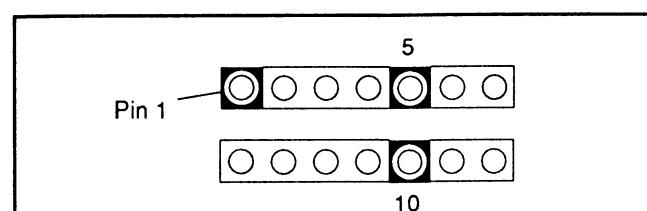

## STANDARD NOTES FOR SERVICING

### Circuit Board Indications

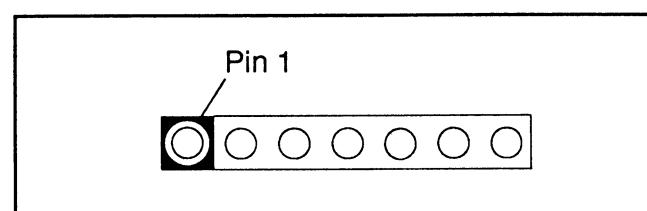

- a. The output pin of the 3 pin Regulator ICs is indicated as shown.

- b. For other ICs, pin 1 and every fifth pin are indicated as shown.

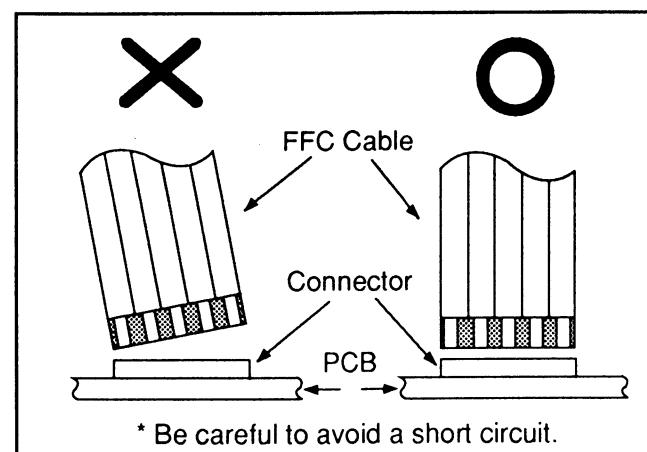

- c. The 1st pin of every male connector is indicated as shown.

### Instructions for Connectors

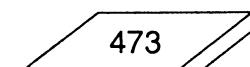

1. When you connect or disconnect the FFC (Flexible Foil Connector) cable, be sure to first disconnect the AC cord.
2. FFC (Flexible Foil Connector) cable should be inserted parallel into the connector, not at an angle.

### How to read the values of the Rectangular type chip components

**Example:**

- (a) Resistor

=473=47[k $\Omega$ ]

(Top View)

- (b) Capacitor

=No Indication

(Top View)

### Caution:

Once chip parts (Resistors, Capacitors, Transistors, etc.) are removed, they must not be reused. Always use a new part.

### Replacement Procedures for Leadless (Chip) Components

**The following procedures are recommended for the replacement of the leadless components used in this unit.**

#### 1.Preparation for replacement

- Soldering iron**  
Use a pencil-type soldering iron (less than 30 watts).

- Solder**  
Eutectic solder (Tin 63%, Lead 37%) is recommended.

- Soldering time**  
Do not apply heat for more than 4 seconds.

- Preheating**  
Leadless capacitors must be preheated before installation.  
(266°F-302°F 130°C-150°C, for about two minutes.)

#### Note:

- Leadless components must not be reused after removal.
- Excessive mechanical stress and rubbing of the component electrode must be avoided.

## 2. Removing the leadless component

Grasp the leadless component body with tweezers and alternately apply heat to both electrodes. When the solder on both electrodes has melted, remove the leadless component with a twisting motion.

### Note:

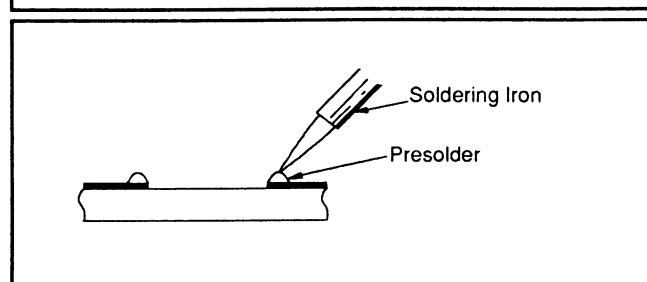

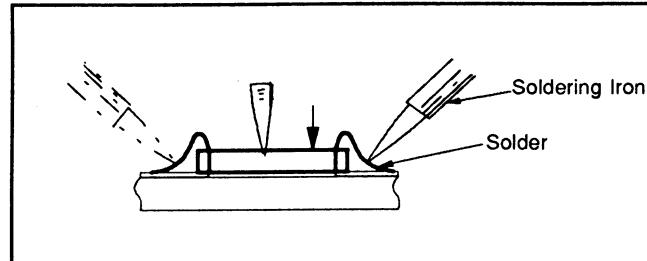

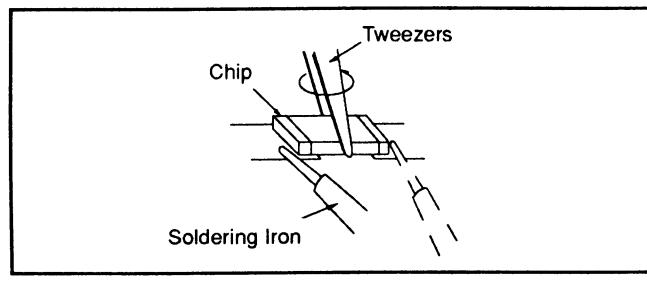

- Do not attempt to lift the component off the board until the component is completely disconnected from the board by the twisting action.
- Be careful not to break the copper foil on the printed circuit board.

## 3. Installing the leadless component

- Presolder the contact points of the circuit board.
- Press the part downward with tweezers and solder both electrodes as shown below.

### Note:

Do not glue the replacement leadless component to the circuit board.

## How to Remove / Install Flat Pack IC

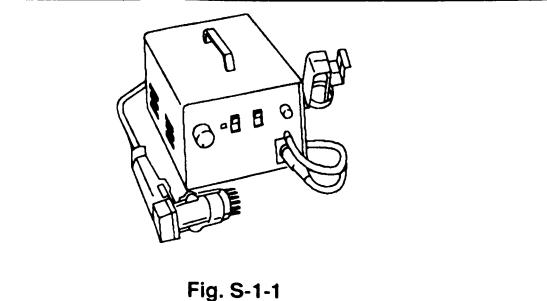

### 1. Removal

#### With Hot-Air Flat Pack-IC Desoldering Machine:

- Prepare the hot-air flat pack-IC desoldering machine, then apply hot air to the Flat Pack-IC (about 5 to 6 seconds). (Fig. S-1-1)

**With Soldering Iron:**

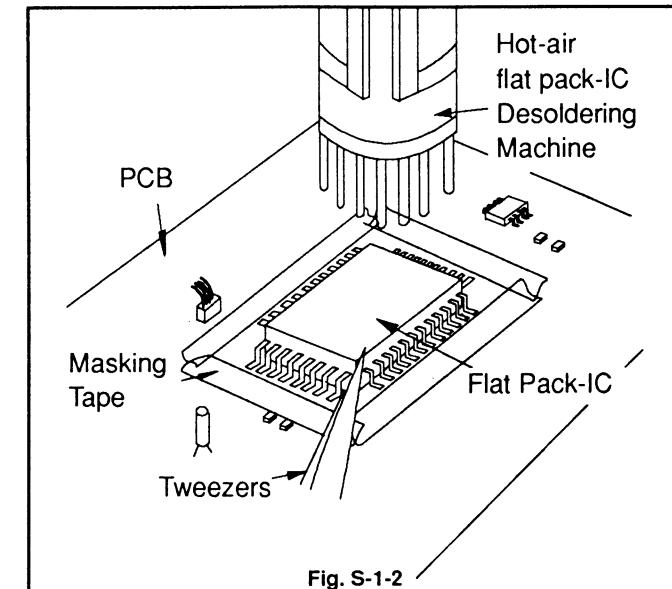

- Using desoldering braid, remove the solder from all pins of the flat pack-IC. When you use solder flux which is applied to all pins of the flat pack-IC, you can remove it easily. (Fig. S-1-3)

(2) Remove the flat pack-IC with tweezers while applying the hot air.

#### Caution:

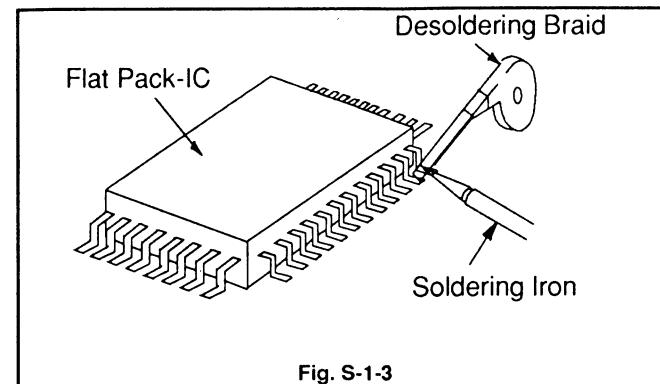

- Do not supply hot air to the chip parts around the flat pack-IC for over 6 seconds because damage to the chip parts may occur. Put masking tape around the flat pack-IC to protect other parts from damage. (Fig. S-1-2)

- The flat pack-IC on the PCB is affixed with glue, so be careful not to break or damage the foil of each pin or the solder- lands under the IC when removing it.

#### With Soldering Iron:

- Using desoldering braid, remove the solder from all pins of the flat pack-IC. When you use solder flux which is applied to all pins of the flat pack-IC, you can remove it easily. (Fig. S-1-3)

- While heating the pins using a fine tip soldering iron or hot air blower, pull up the wire as the solder melts so as to lift the IC leads from the PCB contact pads as shown in Fig.S-1-5.

#### Note:

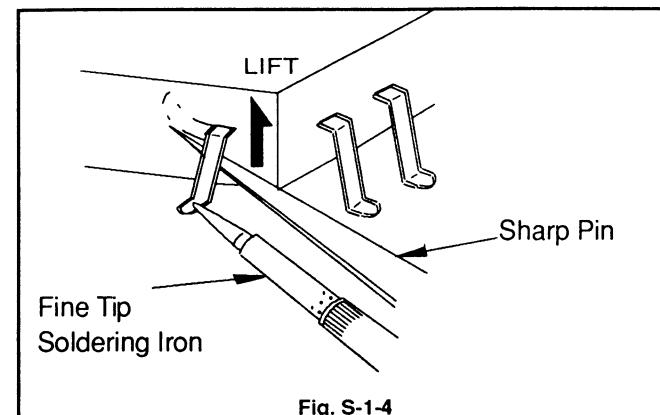

When using a soldering iron, care must be taken to ensure that the flat pack-IC is not being held by glue. When the flat pack-IC is removed from the PCB, handle it gently because it may be damaged if force is applied.

## 2. Installation

- Using desoldering braid, remove the solder from the foil of each pin of the flat pack-IC on the PCB so you can install a replacement flat pack-IC more easily.

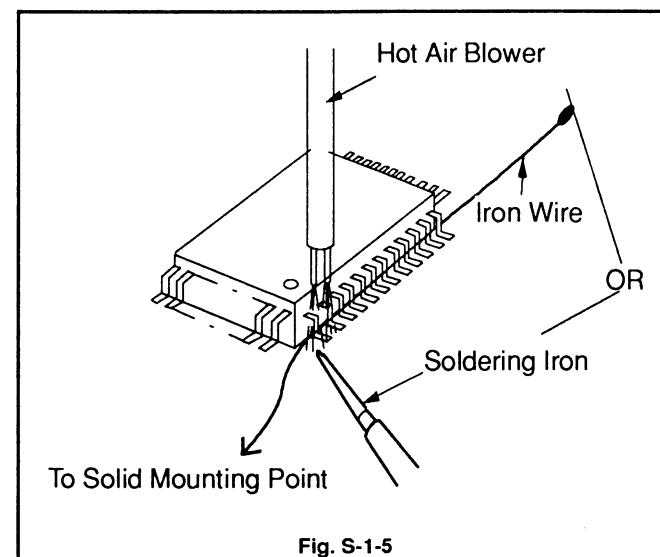

- The "•" mark on the flat pack-IC indicates pin 1. (See Fig. S-1-6.) Be sure this mark matches the 1 on the PCB when positioning for installation. Then pre-solder the four corners of the flat pack-IC. (See Fig. S-1-7.)

- Solder all pins of the flat pack-IC. Be sure that none of the pins have solder bridges.

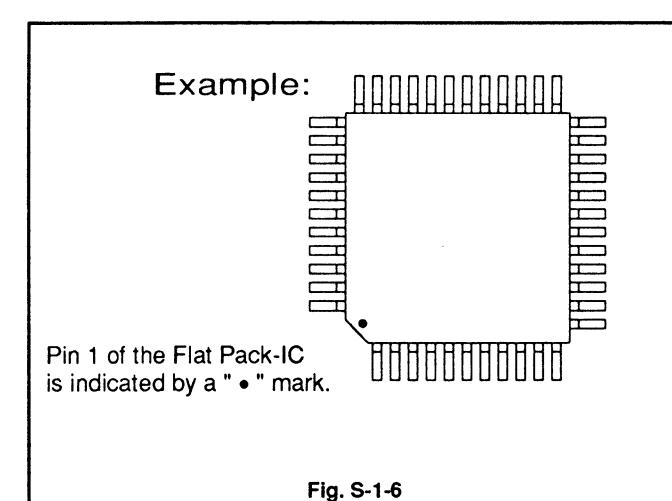

#### With Iron Wire:

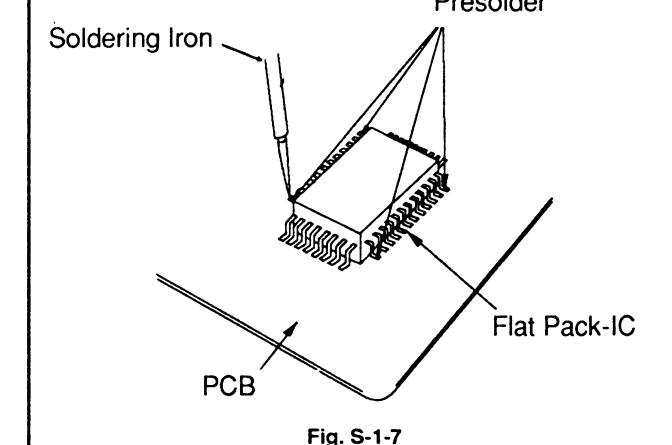

- Using desoldering braid, remove the solder from all pins of the flat pack-IC. When you use solder flux which is applied to all pins of the flat pack-IC, you can remove it easily. (Fig. S-1-3)
- Affix the wire to a workbench or solid mounting point, as shown in Fig. S-1-5.

VCR-NOTE

Pin 1 of the Flat Pack-IC is indicated by a "•" mark.

1-3-3

## Instructions for Handling Semiconductors

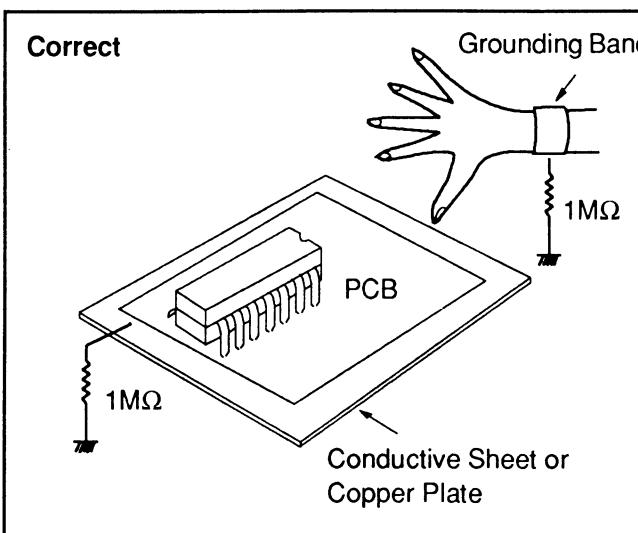

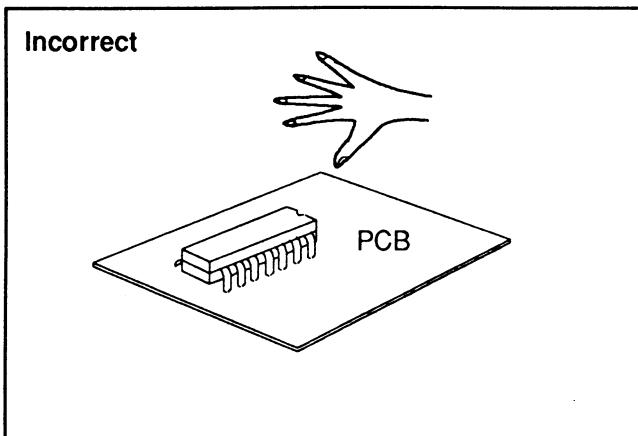

Electrostatic breakdown of the semiconductors may occur due to a potential difference caused by electrostatic charge during unpacking or repair work.

### 1. Ground for Human Body

Be sure to wear a grounding band ( $1M\ \Omega$ ) that is properly grounded to remove any static electricity that may be charged on the body.

### 2. Ground for Workbench

Be sure to place a conductive sheet or copper plate with proper grounding ( $1M\ \Omega$ ) on the workbench or other surface, where the semiconductors are to be placed. Because the static electricity charge on clothing will not escape through the body grounding band, be careful to avoid contacting semiconductors with your clothing.

## PREPARATION FOR SERVICING

### How to Use Deck Extension Cable

- (1) Remove deck mechanism assembly.  
If needed, remove Main CBA from chassis.
- (2) Connect deck mechanism assembly and Main CBA by using the Deck Extension Cable as shown in the Fig. 1.

#### Note:

Deck Extension Cable can be used for 2-head models and 4-head models. This unit is a 2-head model. Make sure to use correct connectors as specified in the Fig. 1.

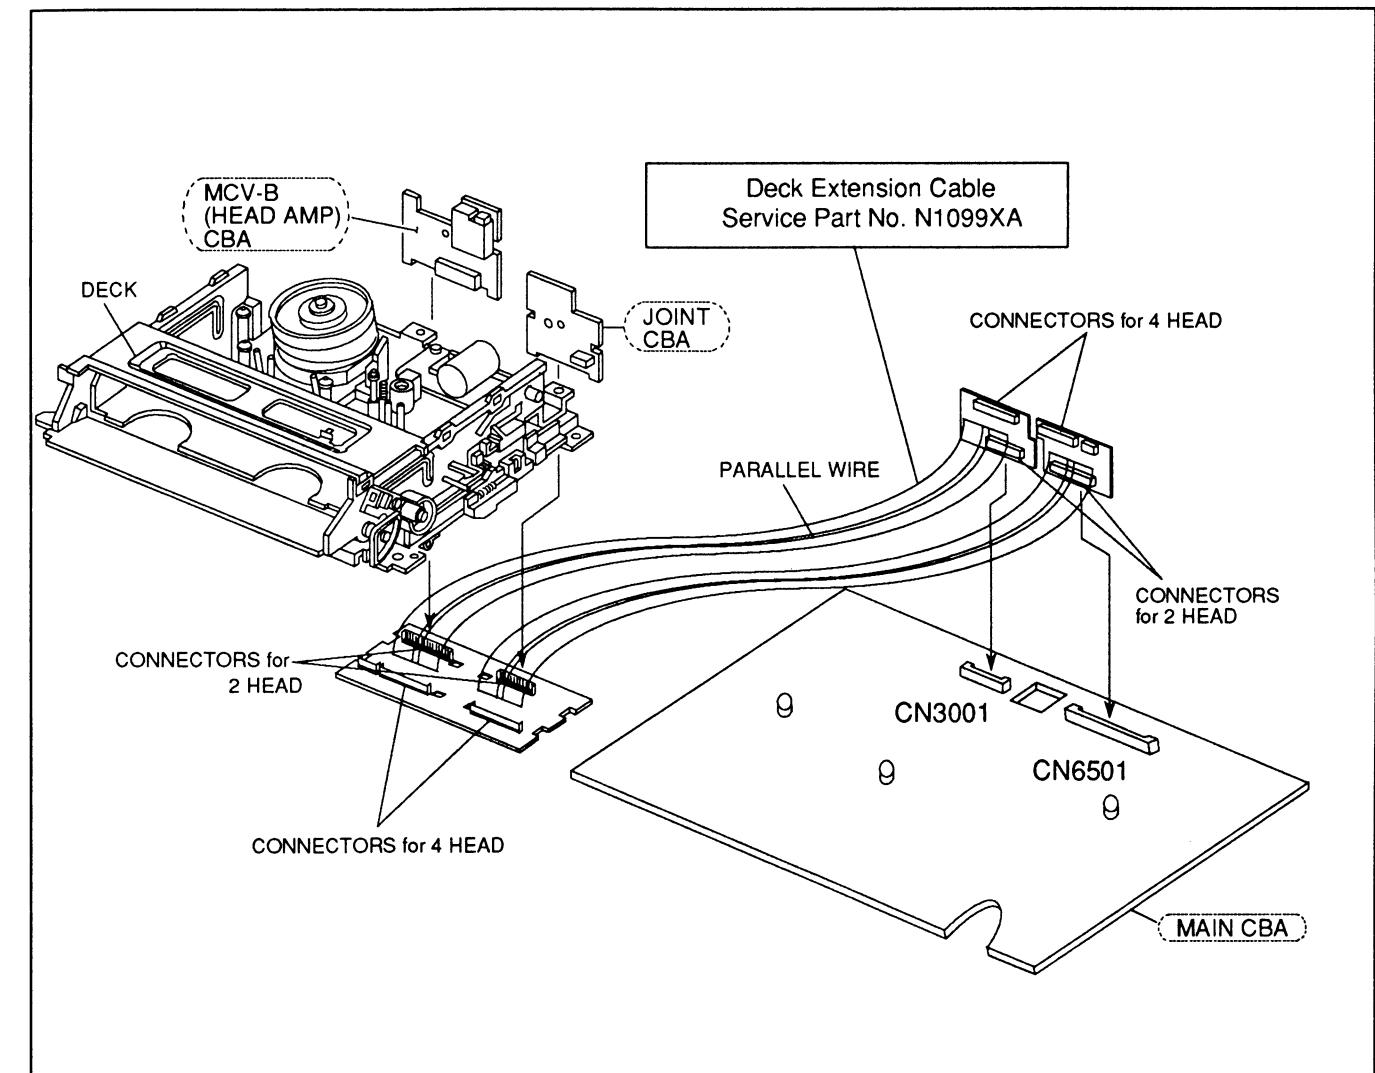

Fig. 1

## How to Enter The Service Mode

### Caution: 1

- Optical sensor system is used for Tape Start and End Sensor on this equipment. Read this page carefully and prepare as described on this page before starting to service: otherwise, the unit may operate unexpectedly.

### Preparing: 1

- Cover Tape Start and End Sensor with Insulation Tape, or circuitly short (SENS INH) as shown in the Fig. 2.

**Note:** Do not run a tape all the way to the start or the end of the tape to avoid tape damage due to inactive Tape End Sensors.

### Caution: 2

- The deck mechanism assembly is mounted on the Main CBA directly, and Cassette Loading Switch and Reel Sensor are mounted on the Main CBA. When the Deck Mechanism Assembly is removed from the Main CBA due to servicing, this switch will not operate automatically. The Reel Sensor is mounted on the Main CBA. When Deck Mechanism Assembly is removed from the Main CBA due to servicing, the Cylinder is forced to stop.

### Preparing: 2

- When you insert or eject the tape, press the "CASS. SW" manually on the Main CBA.
- To avoid the Cylinder is forced to stop, connect (SENS INH).

## MAIN CBA TOP VIEW

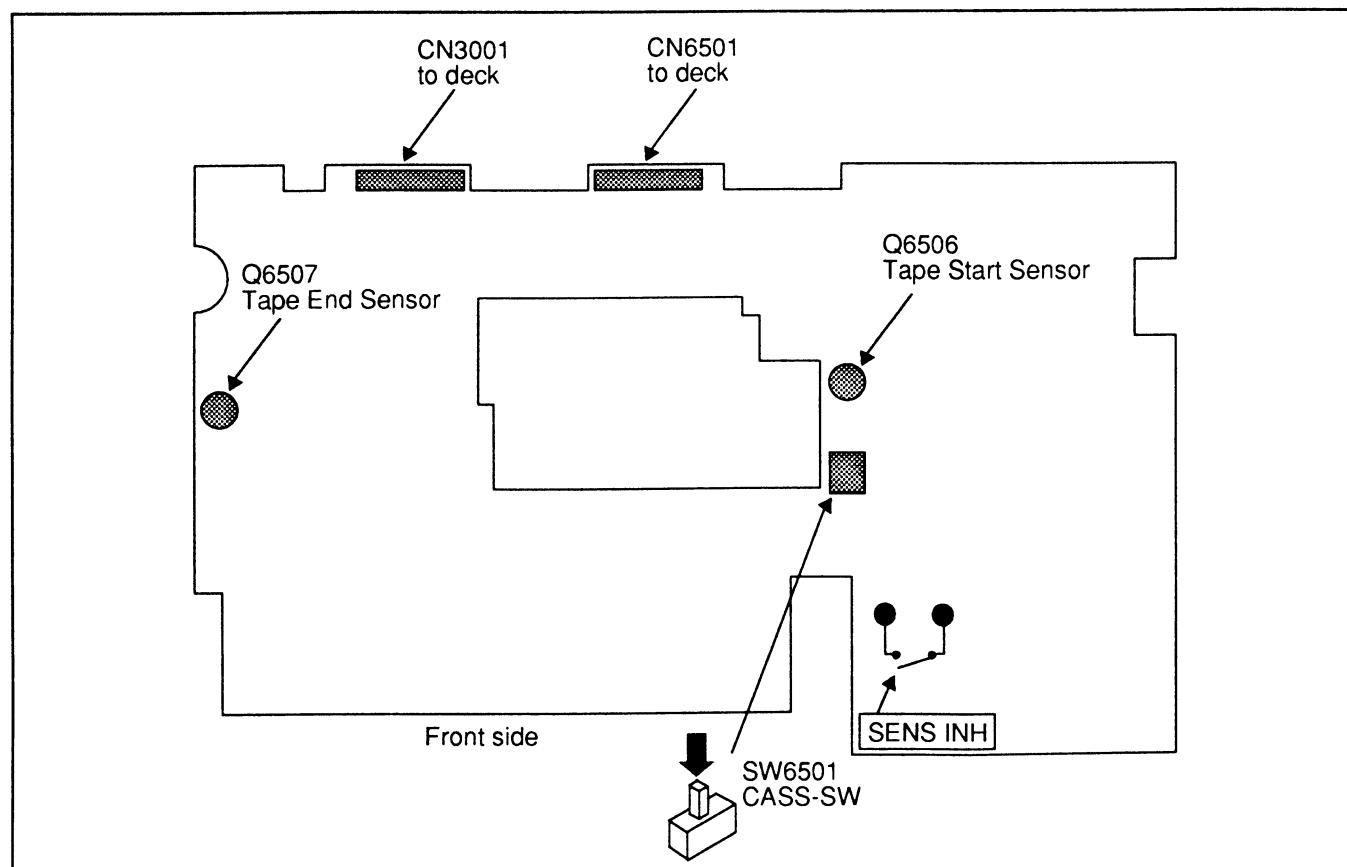

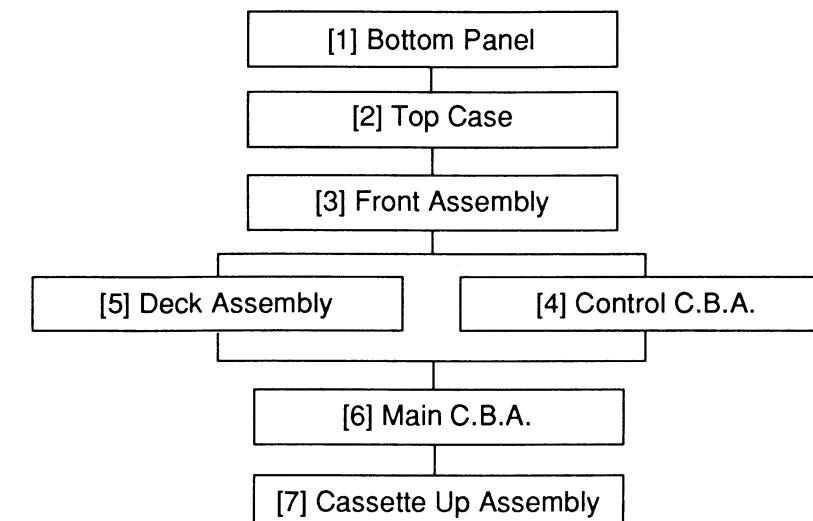

Fig. 2

## DISASSEMBLY INSTRUCTIONS [CABINET]

### Disassembly Flow Chart

This flow chart indicates the disassembly steps of the cabinet parts and the C.B.A. in order to gain access to item(s) to be serviced. When reassembling, perform the step(s) in the reverse order. Bend, route and dress the Cabinet as they were originally.

### Disassembly Method

STEP / LOC. No.	PART	REMOVAL		NOTE
		Fig. No.	REMOVE/*UNLOCK/RELEASE/UNPLUG/UNCLAMP /DESOLDER	
[1]	Bottom Plate	Fig. 1	3(S-1), *6(L-1)	1
[2]	Top Case	Fig. 2	(S-2)	-
[3]	Front Assembly	Fig. 3, 4	*7(L-2), 2(S-3), Deck Holder	2
[4]	Control C.B.A.	Fig. 5	*2(L-3), Connector (A)	-
[5]	Deck Assembly	Fig. 6	4(S-4), 2 Connectors (B)	3
[6]	Main C.B.A.	Fig. 6, 7	*(L-4), (S-5), (S-6), 2(S-7)	-
[7]	Cassette Up Assembly	Fig. 8	2(S-8), *(P-1)	-

**Note:**

①:Order of steps in Procedure

When reassembling, perform step (s) in the reverse order.

These numbers are also used as the identification (location) number of parts in Figures.

②:Part to be removed or installed.

③:Identification of part to be removed, unhooked, unlocked, released, unplugged, unclamped or desoldered.

P= Spring    W= Washer    C= Cut Washer    R= Retaining Ring    L= Locking Tab

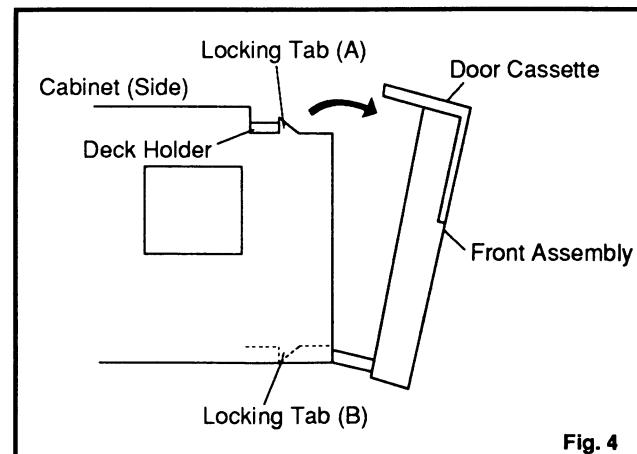

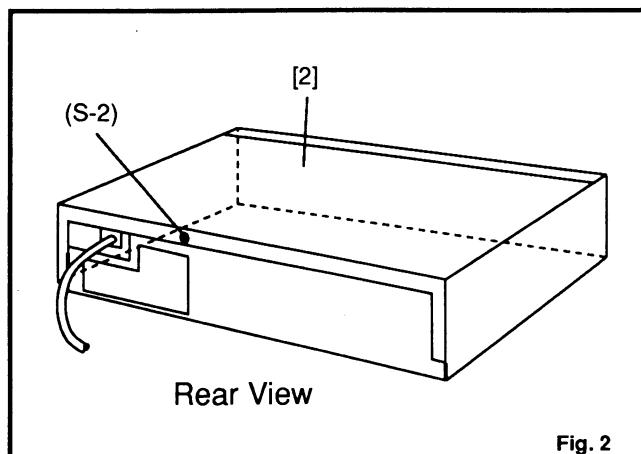

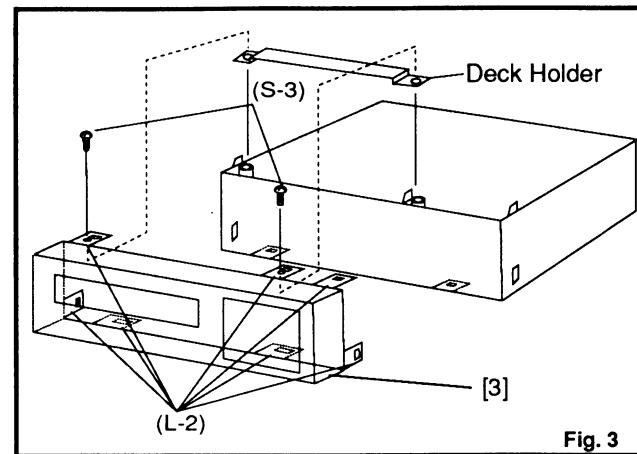

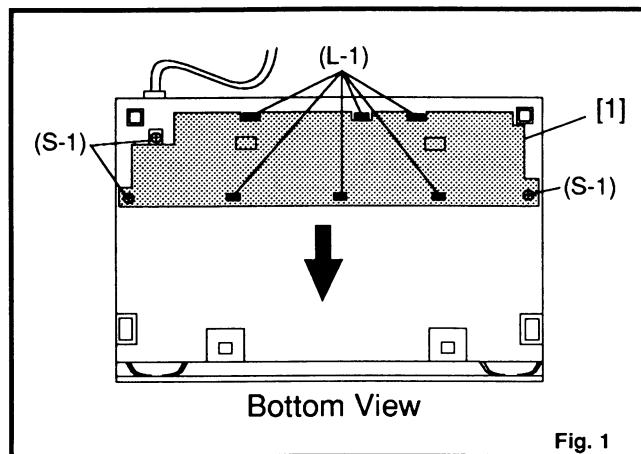

N= Nut    S= Screw    \* = unhook, unlock, release, unplug or desolder

2 (C-2) = 2 Cut Washers (C-2)

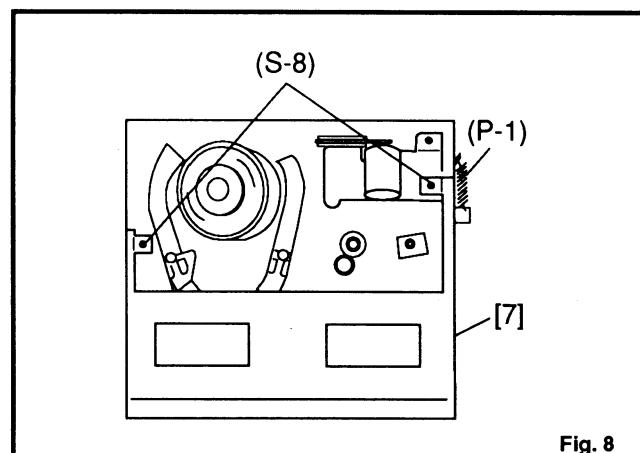

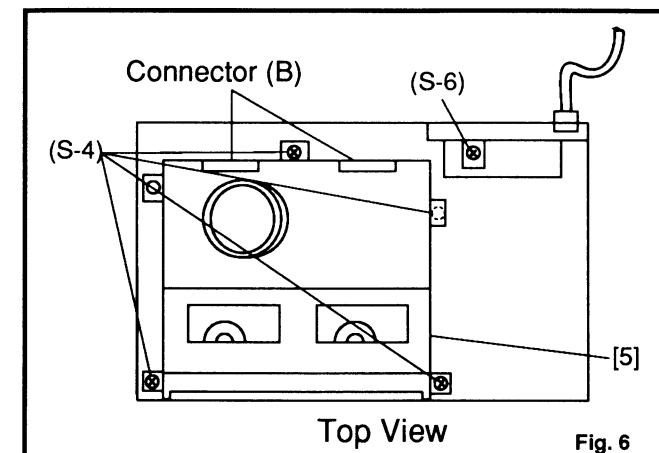

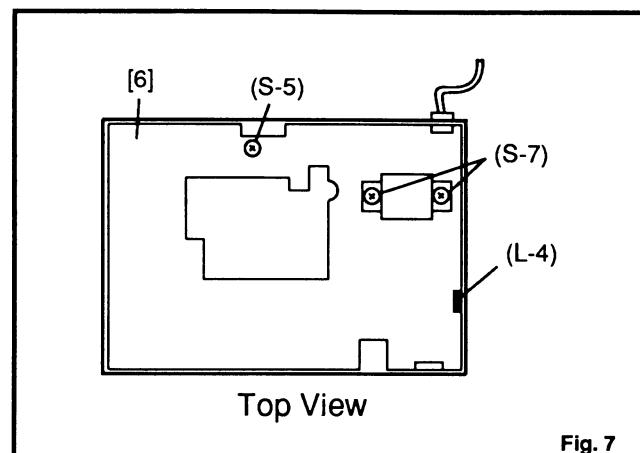

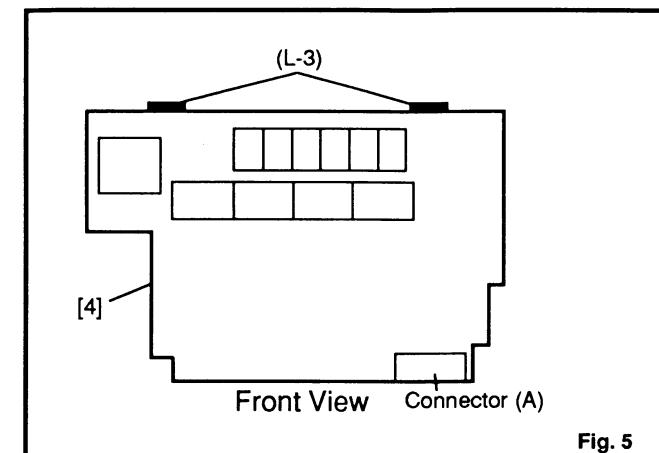

## DISASSEMBLY INSTRUCTIONS [CABINET] (Continued)

### Reference Notes:

1. Remove 3 Screws (S-1), and release 6 Locking Tabs (L-1), then slide the Bottom Plate in the direction of arrow.
  2. Remove 2 Screws (S-3) and release 7 Locking Tabs (L-2) (Bottom Tabs, Side Tabs and then Top Tabs). Then Deck Holder can be removed.
- Note:** When you reinstall the Front Assembly, take care not to break the Locking Tabs. First install Deck Holder Tabs in the holes of Cassette Holder Plate, the Locking Tabs (A) and then Locking Tabs (B). See Fig.4.
3. Remove 4 Screws (S-4), then slowly lift the Deck Assembly up disconnecting the 2 Connectors (B).

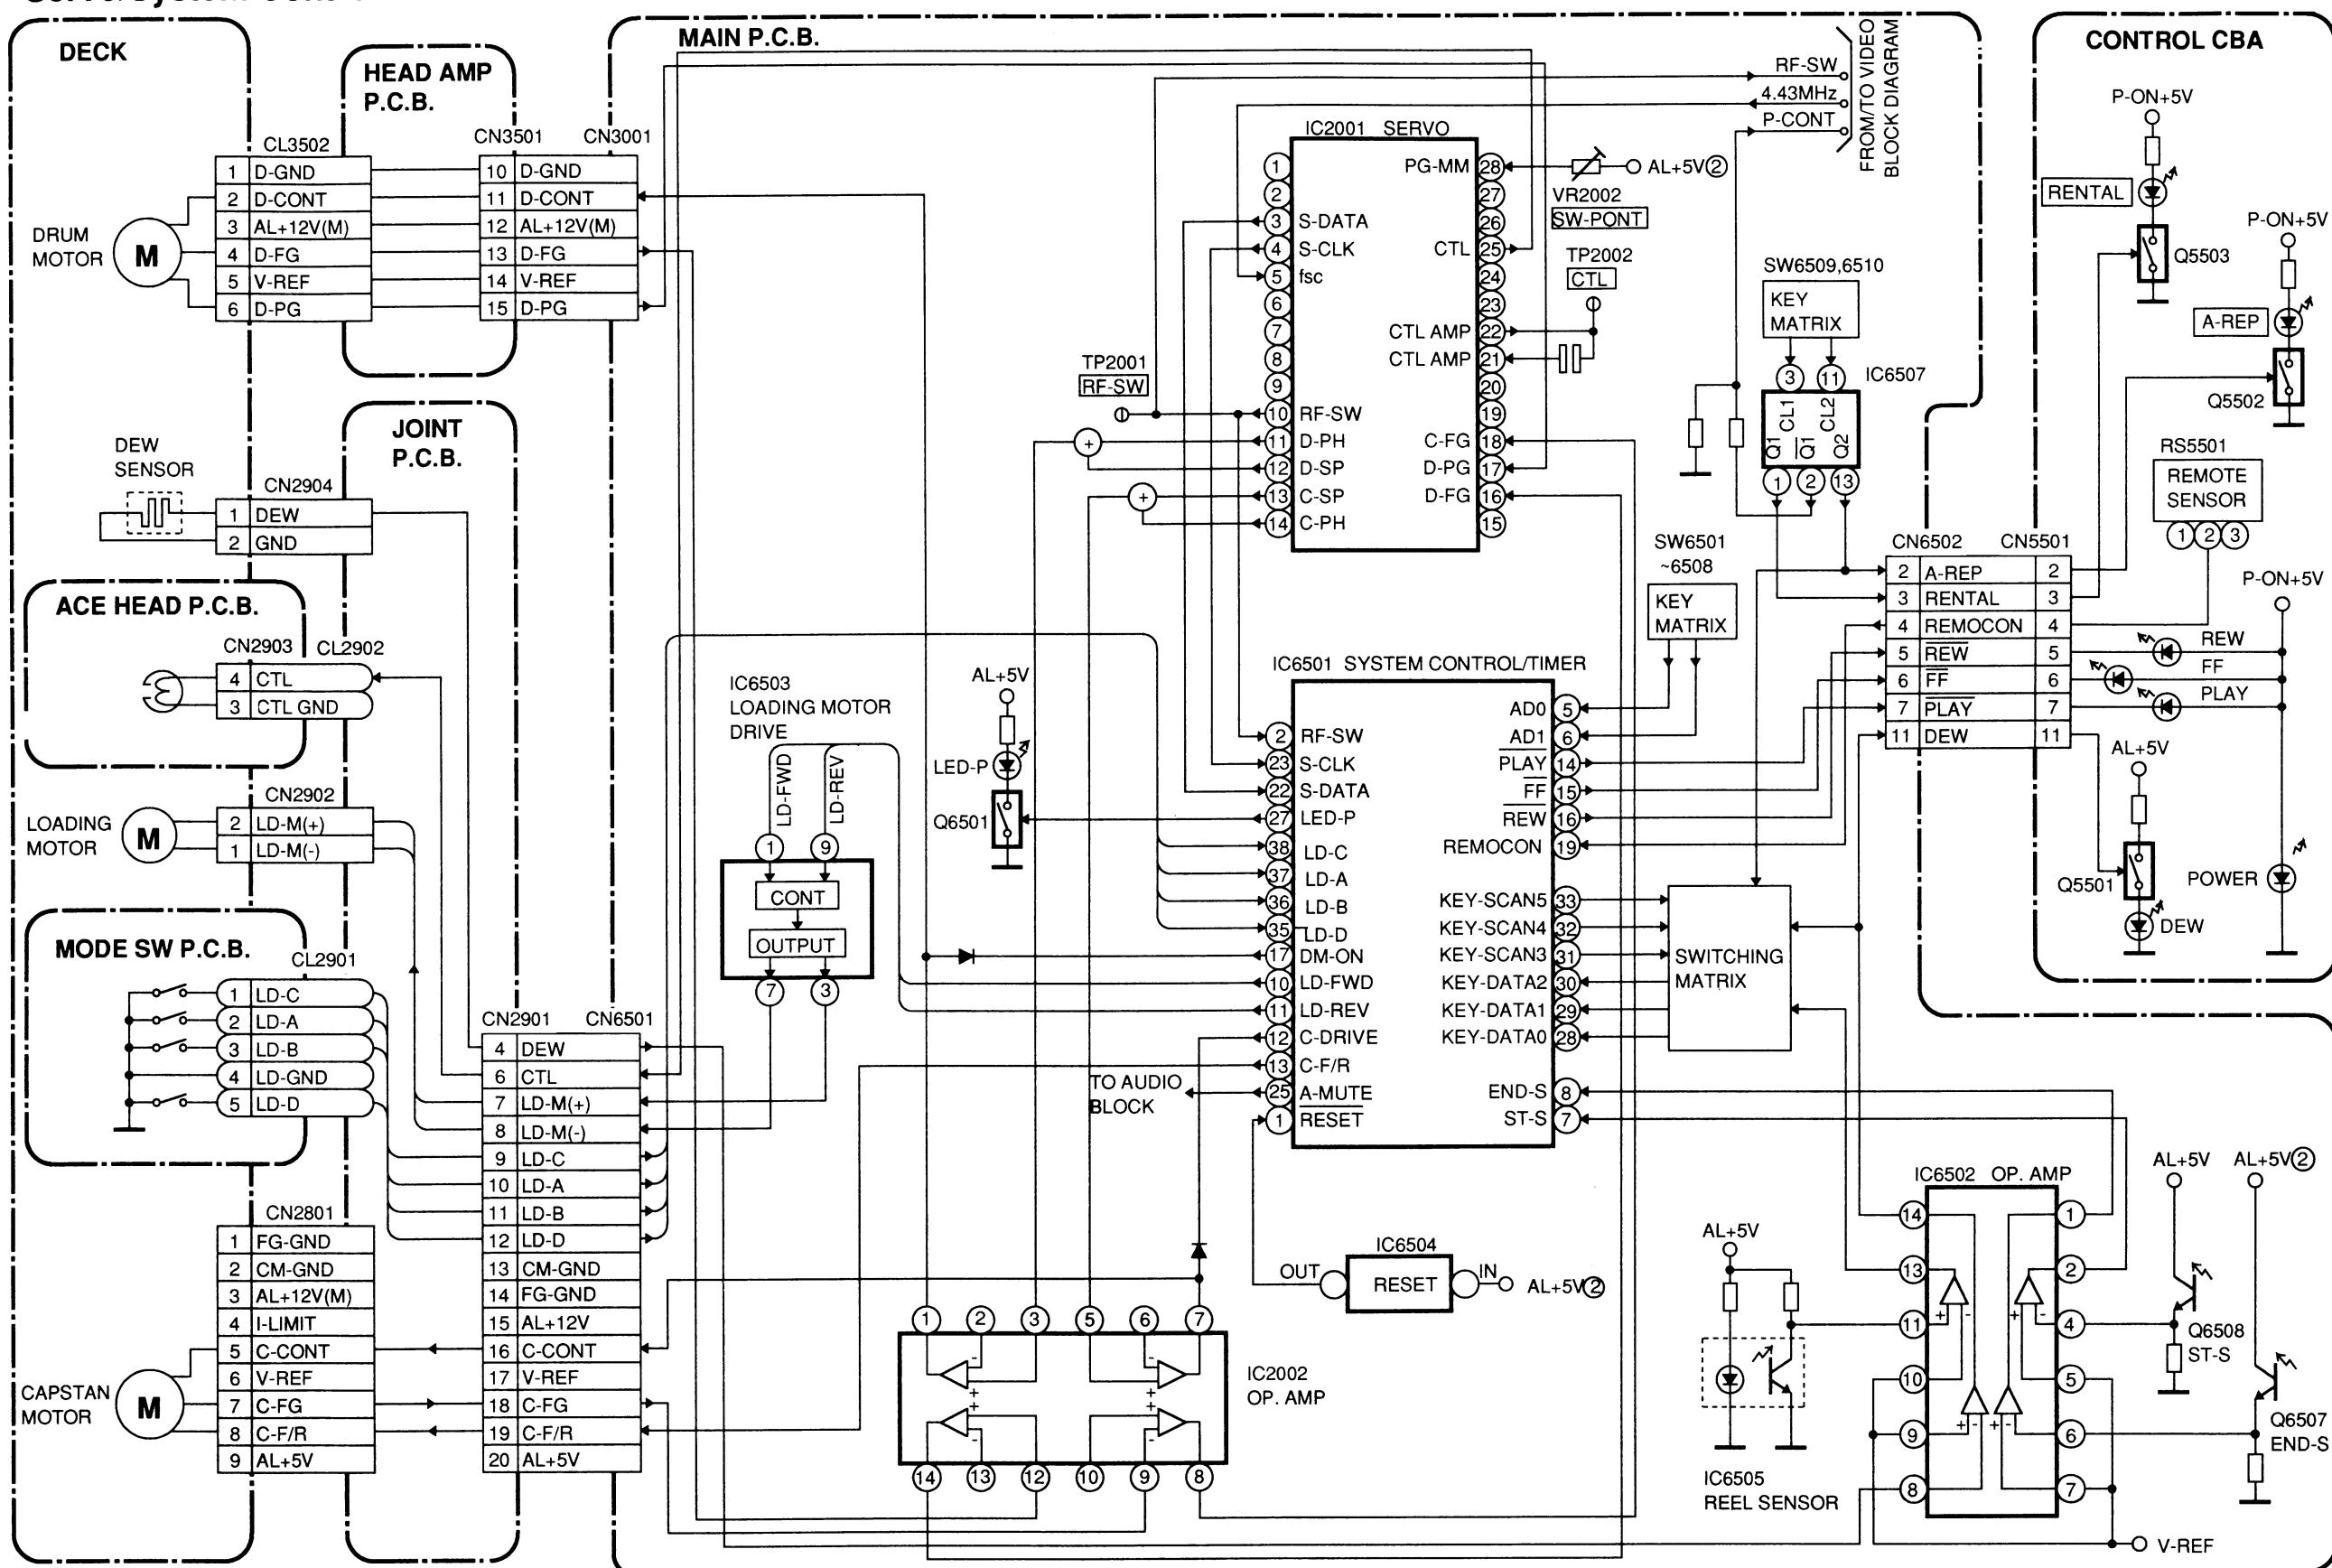

## DISASSEMBLY INSTRUCTIONS [CABINET] (Continued)

# ELECTRICAL ADJUSTMENT INSTRUCTIONS

**General Note:** "CBA" is an abbreviation for "Printed Circuit Board Assembly".

**Note:** Electrical adjustment are required after replacing circuit components and certain mechanical parts. It is important to perform these adjustments only after all repairs and replacements have been completed. Also, do not attempt these adjustments unless the proper equipment is available.

## Test Equipment Required

1. Oscilloscope: Dual-trace with 10:1 probe.
2. TV Monitor
3. Test Tape; F6-A

## Head Switching Point Adjustment

Test Point	Adj. Point	Mode	Input
TP7502 (V-OUT) TP2001 (RF-SW) GND	VR2001 (Switching Point) (Main CBA)	PLAY	---
Tape	M. EQ.	Spec.	
F6-A	Oscilloscope	6.5H(412.7μs)	
Connections of M. EQ.			
Figure			

### Reference Notes:

1. Connect equipments as shown in the above table.
2. Set the "PAL/MESECAM" select switch to "PAL" side.
3. Playback the test tape and adjust VR2001 so that the V-sync front edge of CH1 video output waveform is delayed 6.5H (412.7μs) from the rising of CH2 Head Switching Pulse waveform.

# SCHEMATIC DIAGRAMS/CBA'S AND TEST POINTS

## Standard Notes

### Warning

Many electrical and mechanical parts in this chassis have special characteristics. These characteristics often pass unnoticed and the protection afforded by them cannot necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts that have these special safety characteristics are identified in this manual and its supplements; electrical components having such features are identified by the mark "  $\triangle$  " in the schematic diagram and the parts list. Before replacing any of these components, read the parts list in this manual carefully. The use of substitute replacement parts that do not have the same safety characteristics as specified in the parts list may create shock, fire, or other hazards.

### Note:

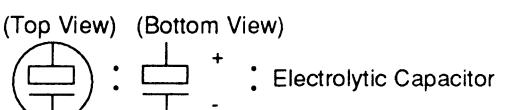

1. All resistance values are indicated in ohms ( $K=10^3$ ,  $M=10^6$ ).
2. Resistor wattages are 1/5W or 1/6W unless otherwise specified.
3. All capacitance values are indicated in  $\mu F$  ( $P=10^{-6} \mu F$ ).
4. All voltages are DC voltages unless otherwise specified.

### Capacitor Temperature Markings

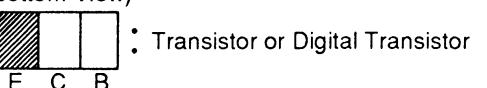

Mark	Capacity change rate	Standard temperature	Temperature range
(B)	$\pm 10\%$	20°C	-25~+85°C
(F)	+30 -80%	20°C	-25~+85°C
(SR)	$\pm 15\%$	20°C	-25~+85°C
(Z)	+30 -80%	20°C	-10~+70°C

Capacitors and transistors are represented by the following symbols.

**LIST OF CAUTION, NOTES, AND SYMBOLS USED IN THE SCHEMATIC DIAGRAMS ON THE FOLLOWING PAGES:**

**1. CAUTION**

FOR CONTINUED PROTECTION AGAINST FIRE HAZARD, REPLACE ONLY WITH THE SAME TYPE T1.6A 250V FUSE.

**2. CAUTION**

Voltage selectable power supply circuit is used in this unit.  
If Main Fuse (F01) is blown, first check to see that all components in the power supply circuit are not defective before you connect the AC plug to the AC power supply. Otherwise it may cause some components in the power supply circuit to fail.

**3. Note:**

- (1) Do not use the part number shown on the drawings for ordering. The correct part number is shown in the parts list, and may be slightly different or amended since the drawings were prepared.
- (2) To maintain original function and reliability of repaired units, use only original replacement parts which are listed with their part numbers in the parts list section of the service manual.

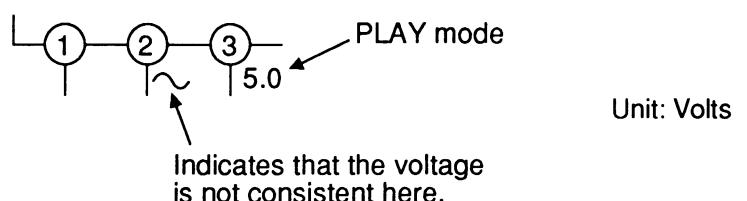

**4. Wire Connectors**

- (1) Prefix symbol "CN" means "connector." (Can disconnect and reconnect)
- (2) Prefix symbol "CL" means "wire-solder holes of the PCB." (Wire is soldered directly.)

**5. Note: Mark "•" is a leadless (chip) component.**

**6. Mode: SP/REC**

**7. Voltage indications for PLAY and REC modes on the Schematics are as shown below:**

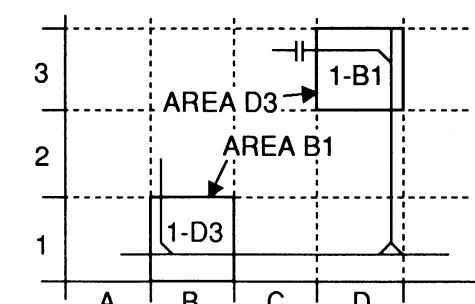

**8. How to read converged lines**

1-D3  
 ↗ Distinction Area  
 ↗ Line Number  
 (1 to 3 digits)

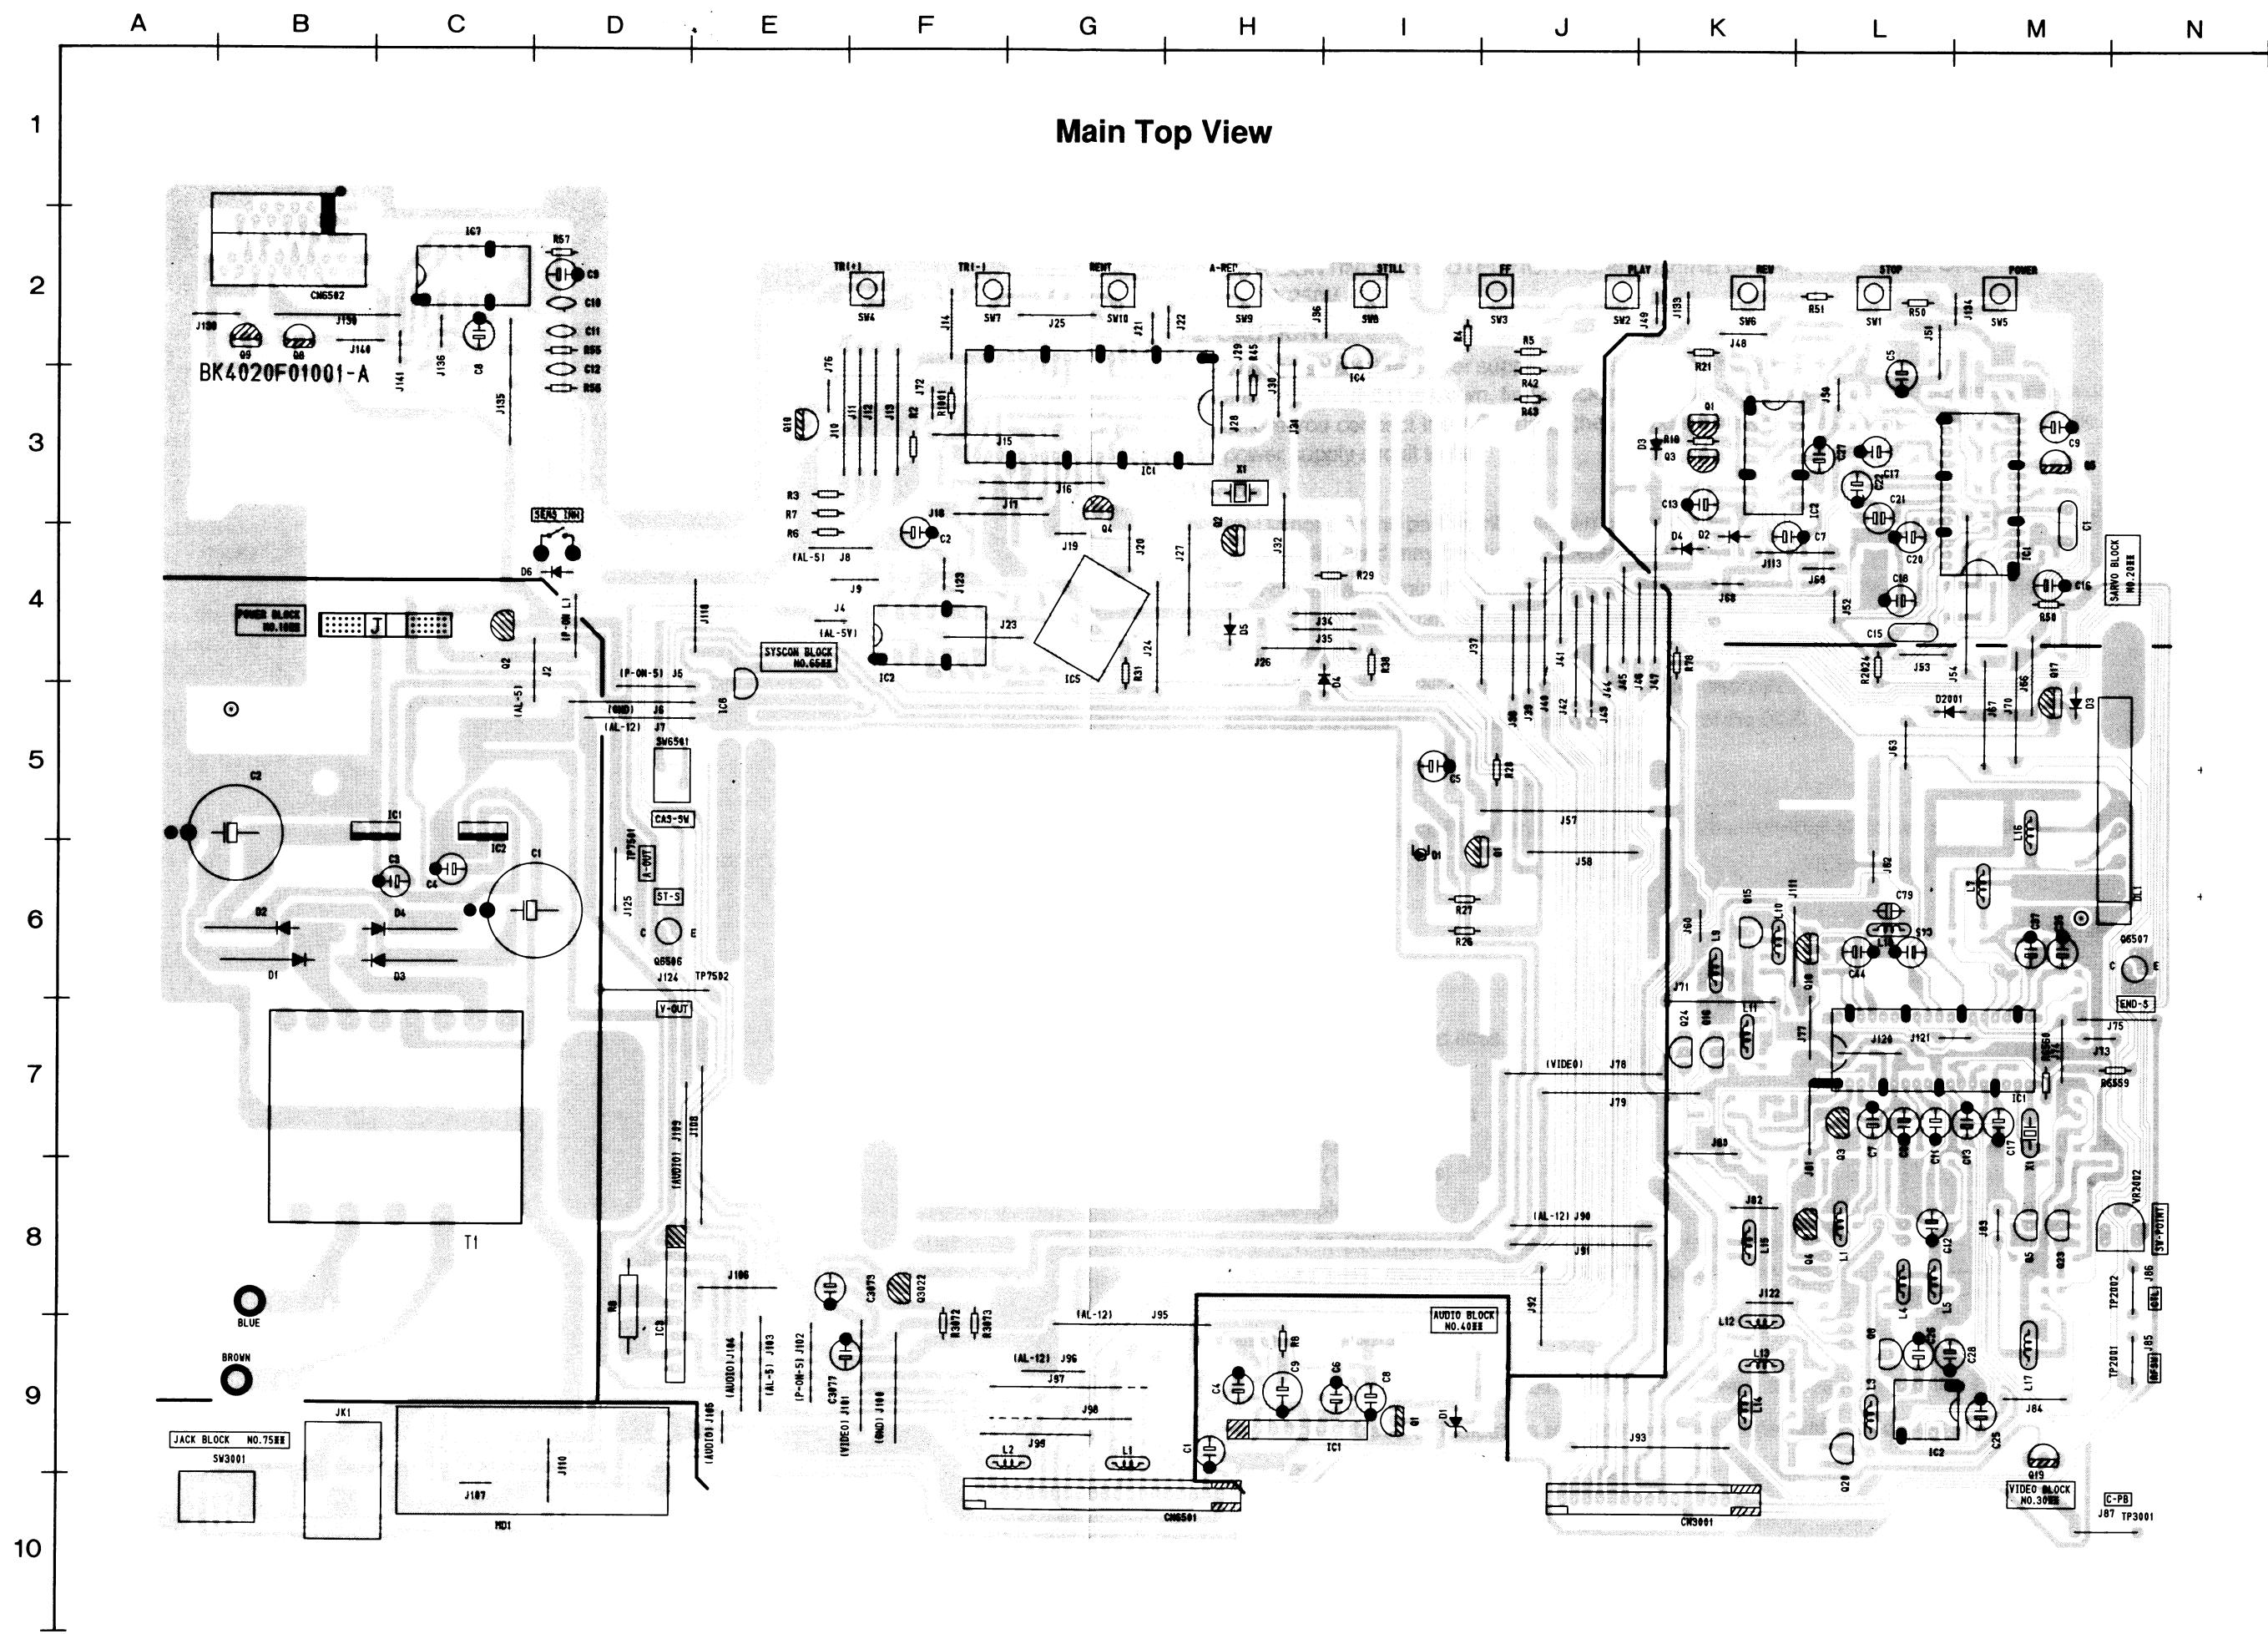

**Examples:**

1. "1-D3" means that line number "1" goes to area "D3".
2. "1-B1" means that line number "1" goes to area "B1".

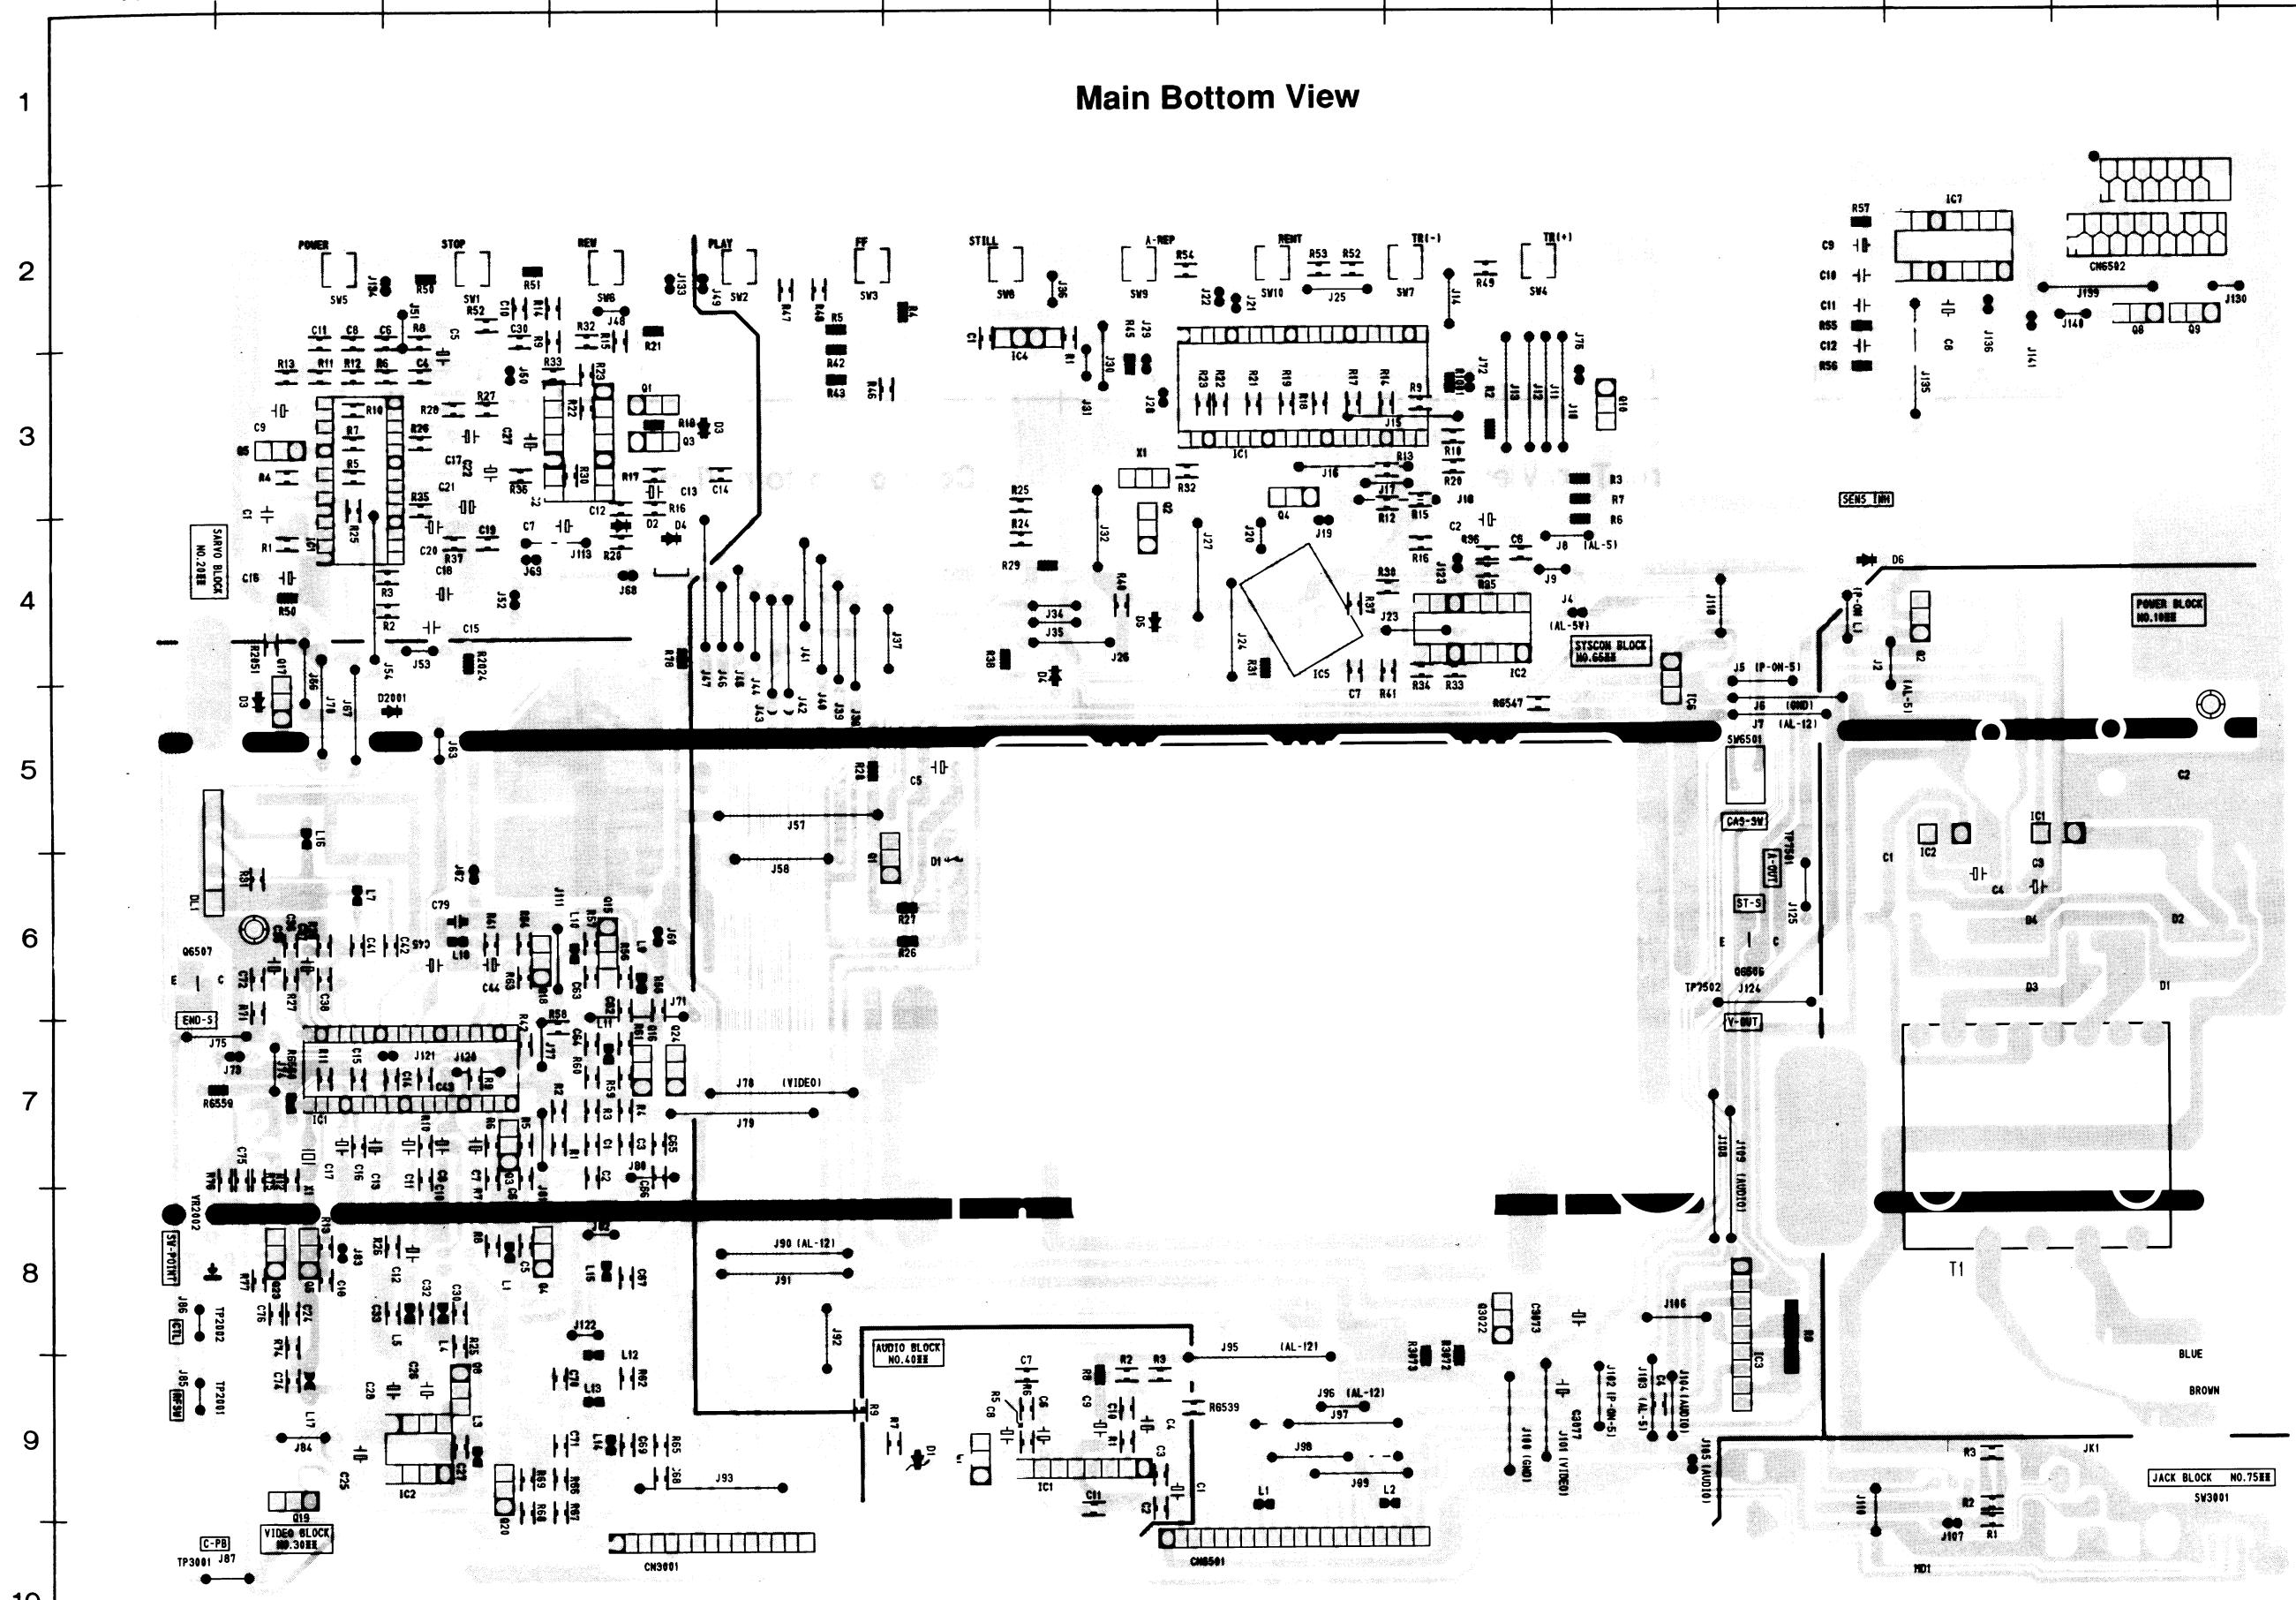

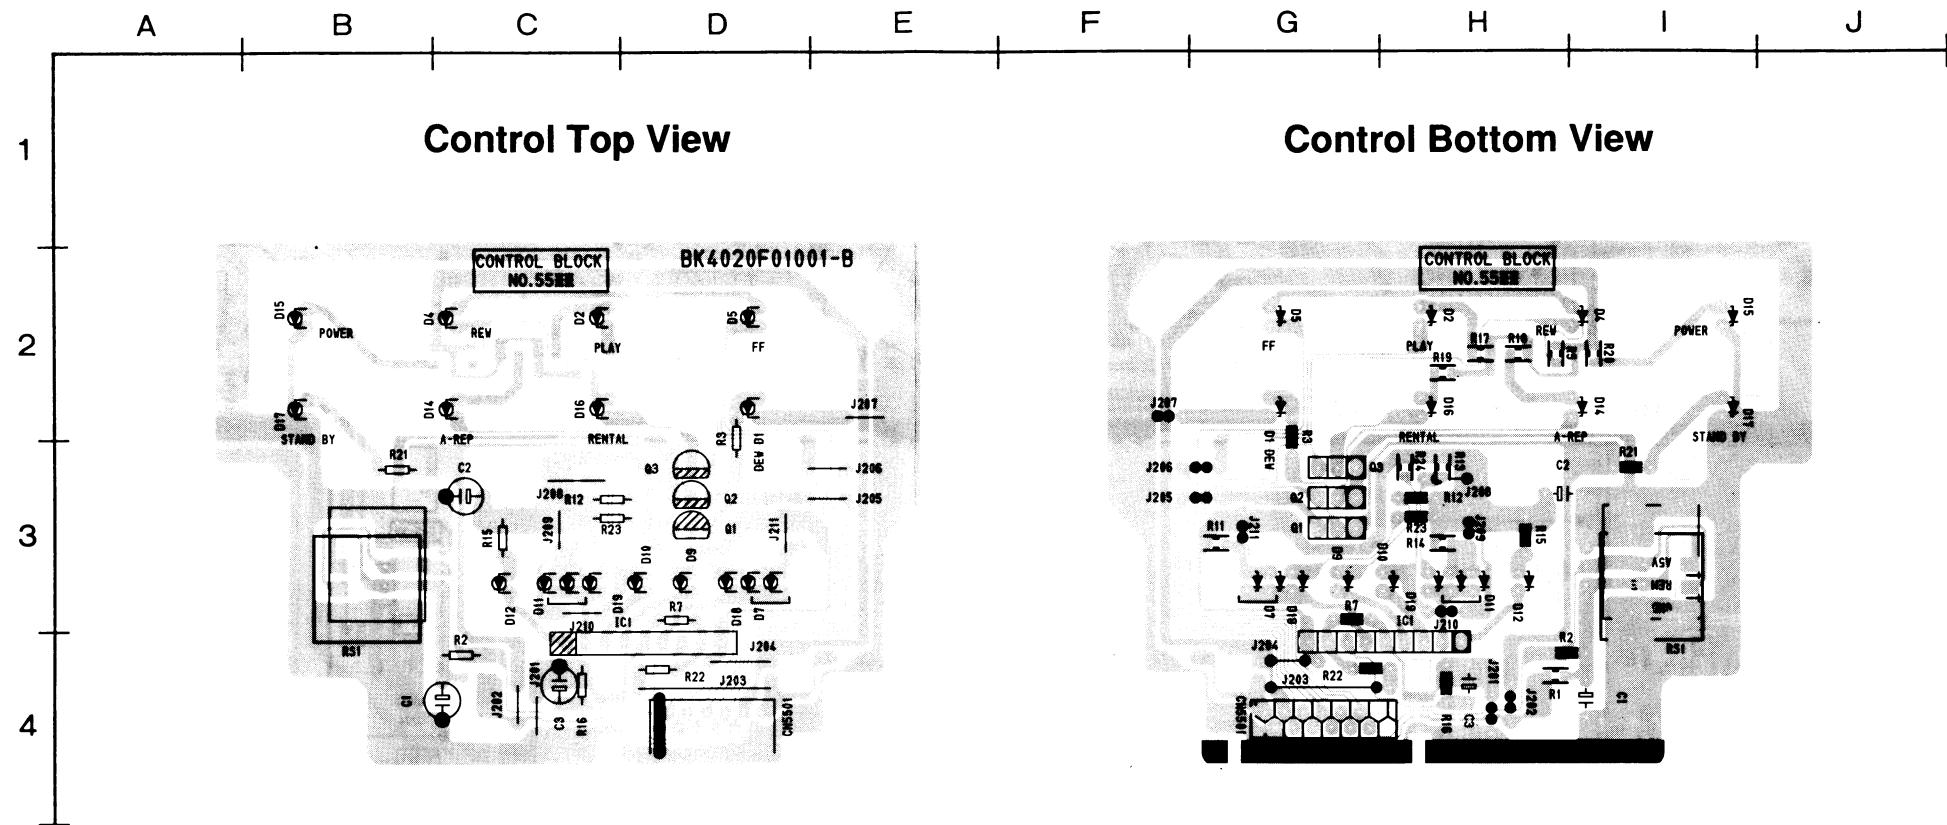

**9. Test Point Information**

- : Indicates a test point with a jumper wire across a hole in the PCB.
- : Used to indicate a test point with a component lead on foil side.
- ▨ : Used to indicate a test point with no test pin.
- : Used to indicate a test point with a test pin.

#### Note:

1. Clean all parts for the tape transport (Upper Drum with Video Head / Pinch Roller / Audio Control Head) using 90% Isopropyl Alcohol.
2. After cleaning the parts, do all DECK ADJUSTMENTS.
3. For the reference numbers listed above, refer to Deck Exploded Views.

## SERVICE FIXTURES AND TOOLS

### Cleaning

#### Cleaning of Video Head

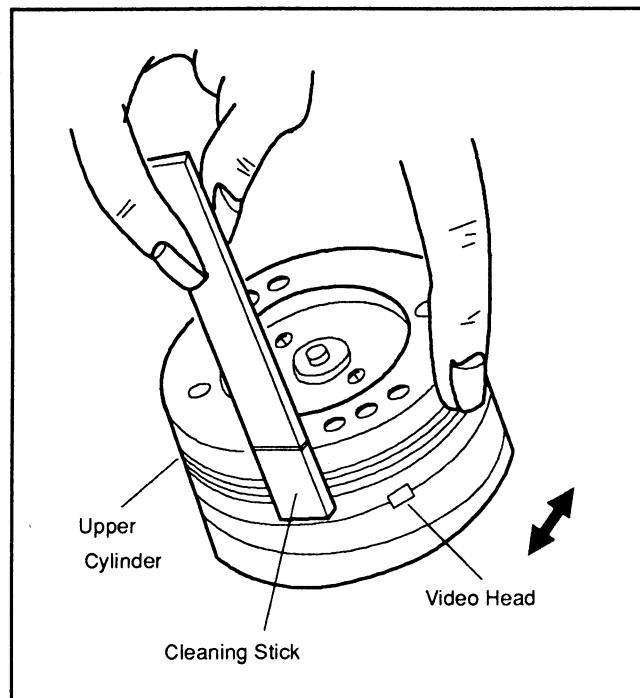

Clean the head with a head cleaning stick or chamois skin.

##### Procedure

1. Remove the top cabinet.
2. Put on a glove (thin type) to avoid touching the upper and lower drum with your bare hand.
3. Put a few drops of 90% Isopropyl alcohol on the head cleaning stick or on the chamois skin and, by slightly pressing it against the head tip, turn the upper drum to the right and to the left.

##### Notes:

1. The video head surface is made of very hard material, but since it is very thin, avoid cleaning it vertically.
2. Wait for the cleaned part to dry thoroughly before operating the unit.
3. Do not reuse a stained head cleaning stick or a stained chamois skin.

#### Cleaning of Audio Control Head

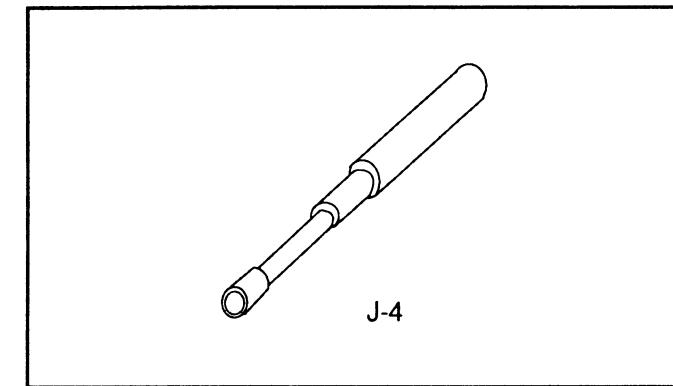

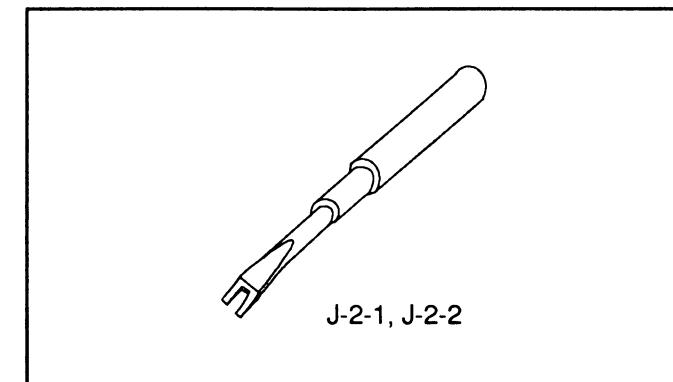

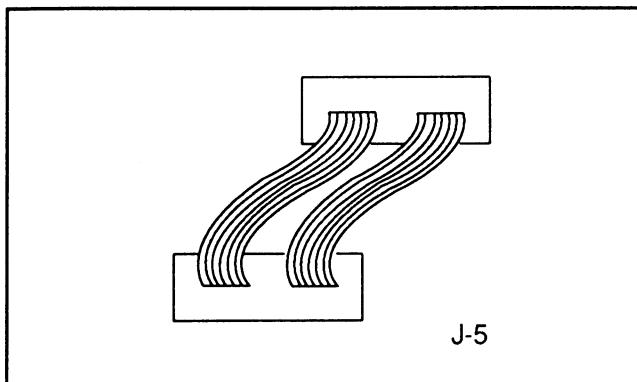

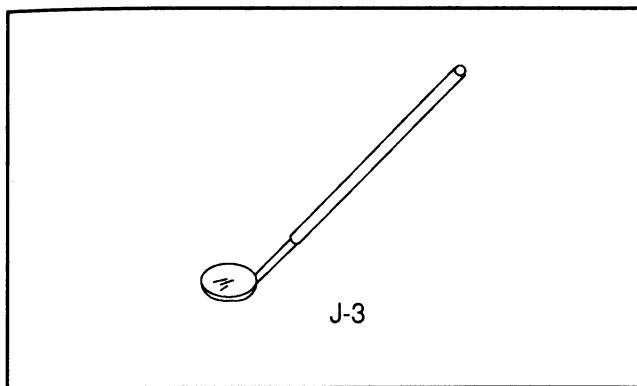

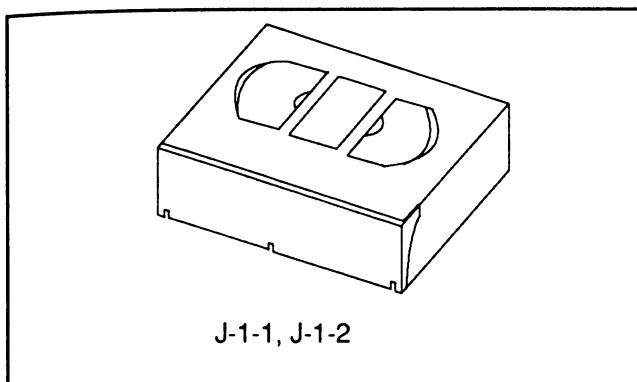

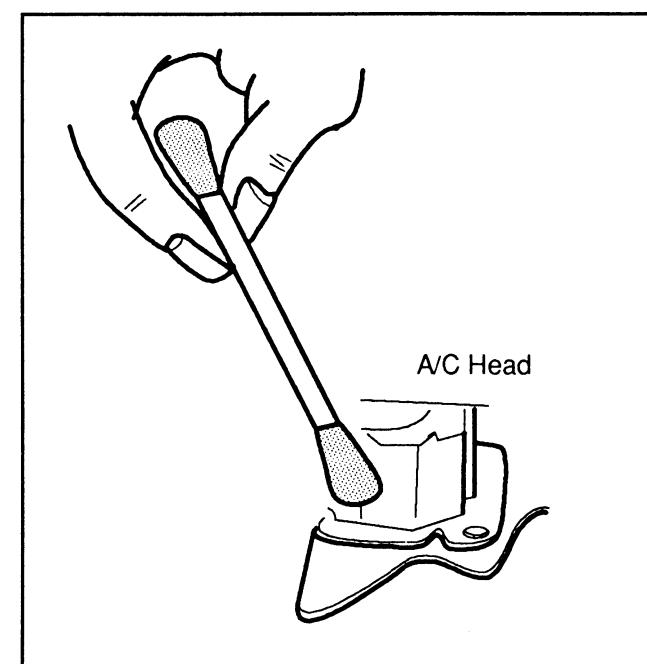

Clean the head with a cotton swab.

##### Procedure

1. Remove the top cabinet.
2. Dip the cotton swab in 90% isopropyl alcohol and clean the audio control head. Be careful not to damage the upper drum and other tape running parts.

##### Notes:

1. Avoid cleaning the audio control head vertically.
2. Wait for the cleaned part to dry thoroughly before operating the unit or damage may occur.

Ref. No.	Name	Part No.	Adjustment
J-1-1	Alignment Tape	F6-A	Head Adjustment of Audio Control Head
J-1-2	Alignment Tape	F6-N	Azimuth and X Value Adjustment of Audio Control Head / Adjustment of Envelope Waveform
J-2-1	Special Driver, Large	FSJ-0001	X Value
J-2-2	Special Driver, Small	FSJ-0006	Guide Roller
J-3	Mirror	FSJ-0004	Tape Transportation Check
J-4	Box Driver, Mx3	FSJ-0005	A/C Head Height
J-5	Deck Extension Cable	N1099XA	All Mechanical and Electrical Adjustments

Note: Before starting any adjustment, take the Deck Assembly out of the cabinet and use J-5 to connect the Deck Assembly with the Main CBA.

# MECHANICAL ALIGNMENT PROCEDURES

## Service Information

### A. Method for Manual Tape Loading/Unloading of VCR.

To place the Cassette Holder in the down position, turn the Pulley Assembly clockwise as viewed from the back of Deck. To place the Cassette Holder in the up position, turn the Pulley Assembly counterclockwise as viewed from the back of the Deck.

### B. How to place the Cassette Holder in the down position without a cassette tape.

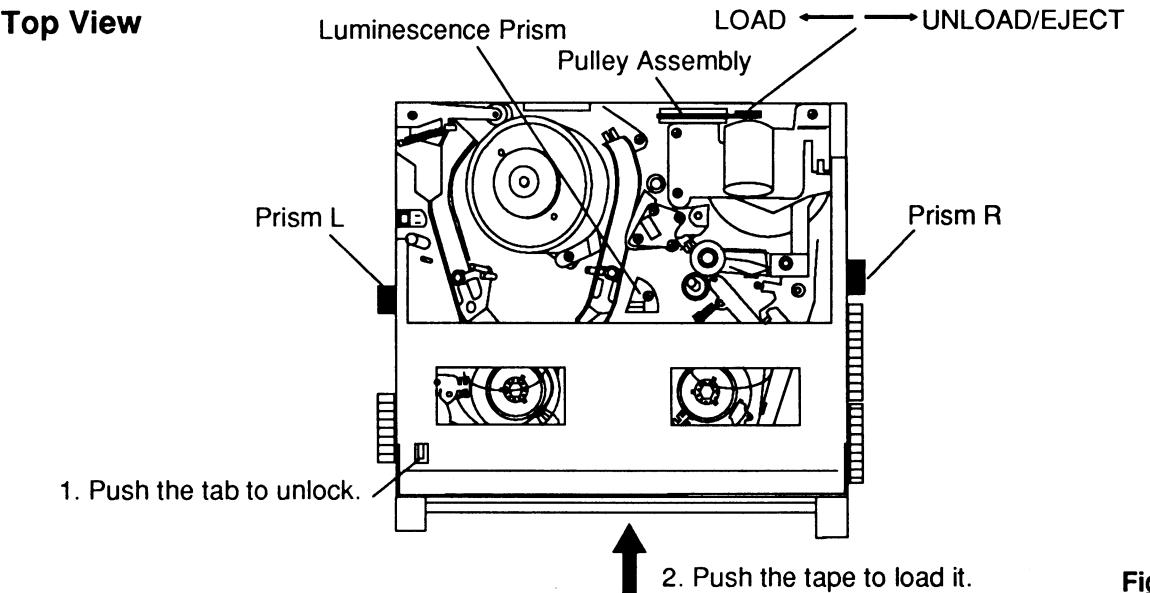

#### METHOD

1. Disconnect the AC Plug and remove the Top Cover.
2. Cover the LED Sensors located below Prism L and Prism R.

**Note:** The tape sensor is extremely susceptible to damage from static electricity. When handling the tape sensor use a conductive mat, a grounded soldering iron, and so on, to protect the tape sensor from static damage.

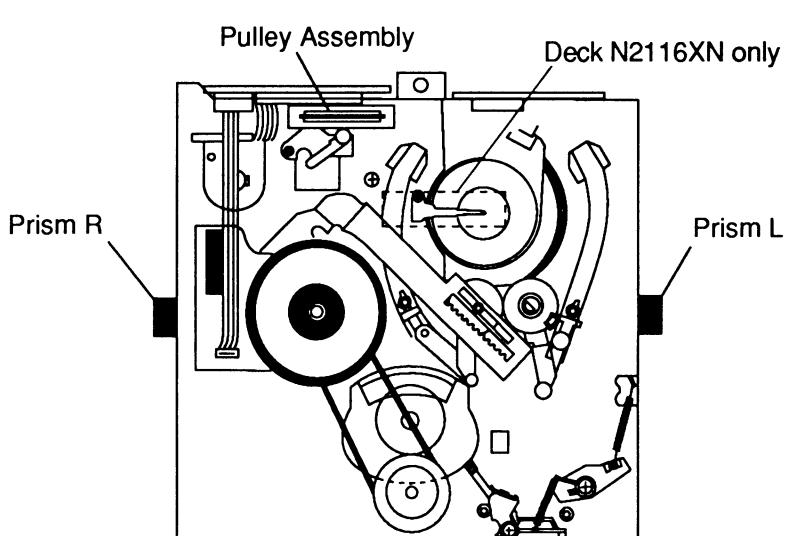

3. Turn the Pulley Assembly clockwise as viewed from the back of the Deck.

**Top View**

**Fig. M1**

**Bottom View**

**Fig. M2**

## 1. Tape Interchangeability Alignment (Final Alignment)

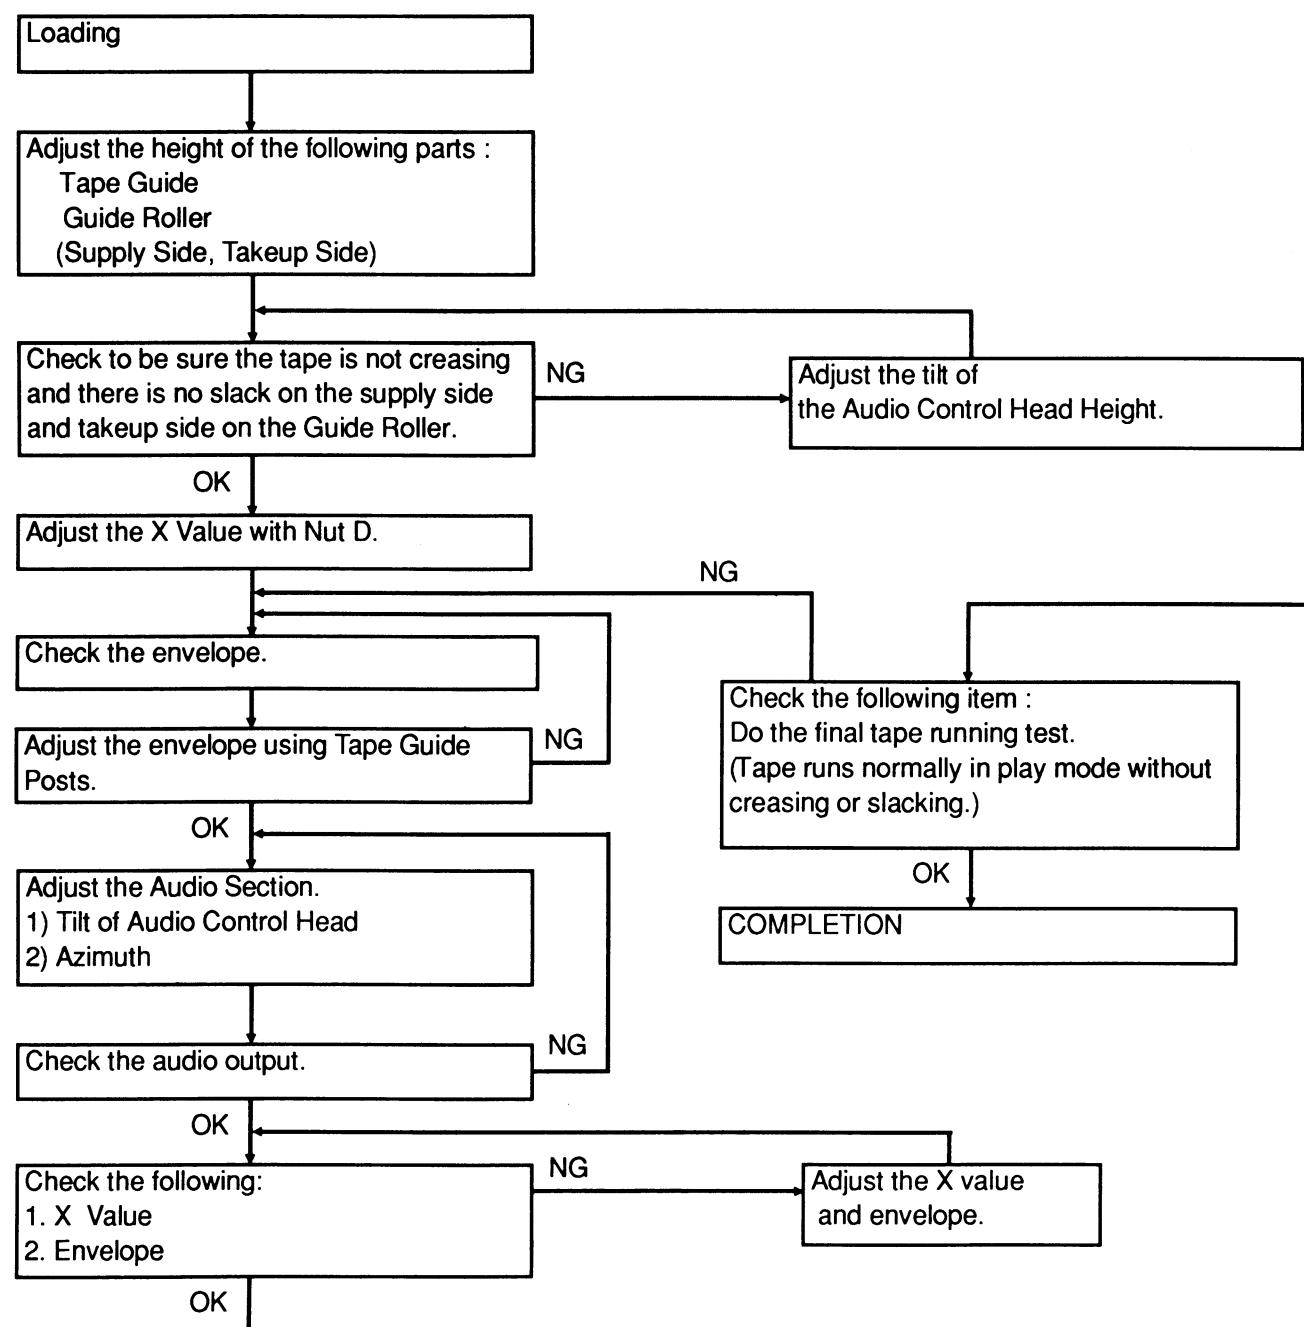

**Note:** To do these alignment procedures, be sure that the Tracking Control Circuit is set to the Neutral mode.

### Equipment required :

- Dual Trace Oscilloscope
- VHS Alignment Tape (F6-A, F6-N)
- Post Alignment Screwdriver
- X-Position Alignment Fixture
- Screwdriver (For the Tape Guide Rollers)
- Box Driver M3

**Note:** After this Mechanical Alignment is completed, secure screw [C] shown in Fig.M6 with lock paint and do all the procedures in the Electrical Adjustment.

### Tape Running Alignment Flowchart

## 1-A. Preliminary Checking and Alignment of Tape Running

### Purpose:

To make sure that the tape running is well stabilized.

### Symptom of Misalignment:

If the tape runs with instability, the tape will be damaged.

1. Play back a cassette tape and check that the tape runs without creasing at Guide Rollers [2] and [3], and at points A and B on the lead surface. (Refer to Fig M3 and M4)
2. If creasing is apparent, align the height of the guide rollers by turning the top of Guide Rollers [2] and [3] with a Post Adjustment Screwdriver. (Refer to Fig. M3 and M5)

**Note:** Before turning the Guide Rollers, loosen the Lock Screw using a lock screwdriver.

**Note:** Do not use an Alignment Tape for this procedure. If the unit is not correctly aligned, the tape may be damaged.

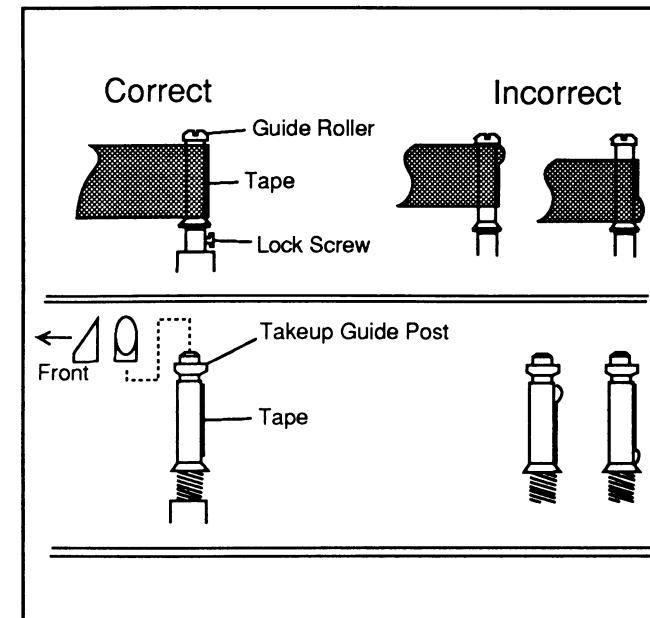

Fig. M5

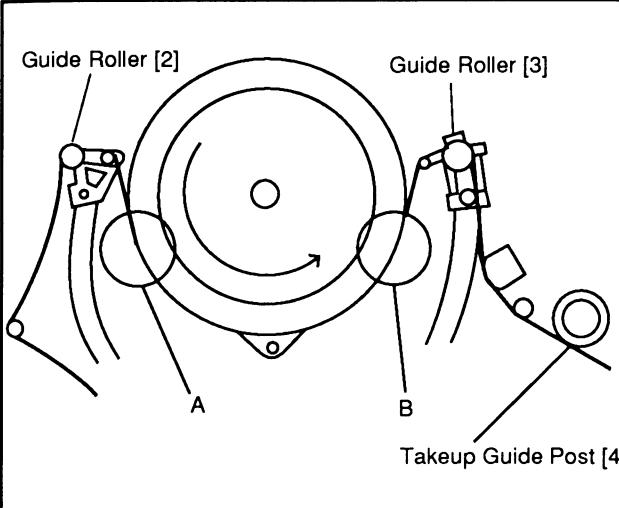

Fig. M3

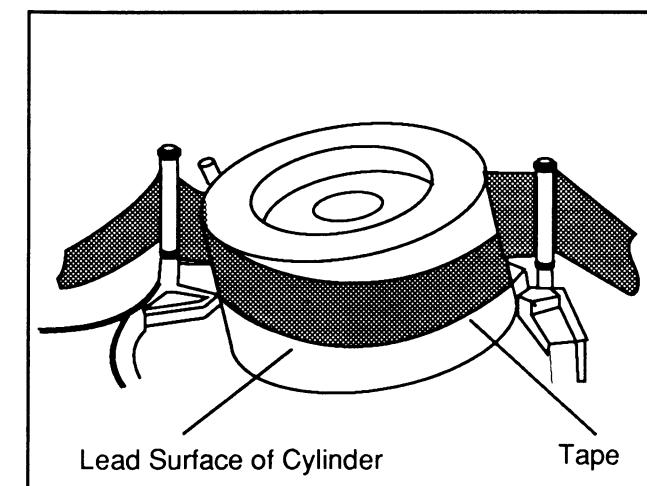

Fig. M4

## 1-B. Preliminary Checking of Audio/Control Head Height

### Purpose :

To make sure that the tape runs properly along the Control Head.

### Symptom of Misalignment:

If the control signal is not properly picked up, proper Servo Operation cannot be achieved.

The head height adjustment is required when the Audio/Control Head is replaced.

For final alignment, do the adjustments described in 1-C and 1-D.

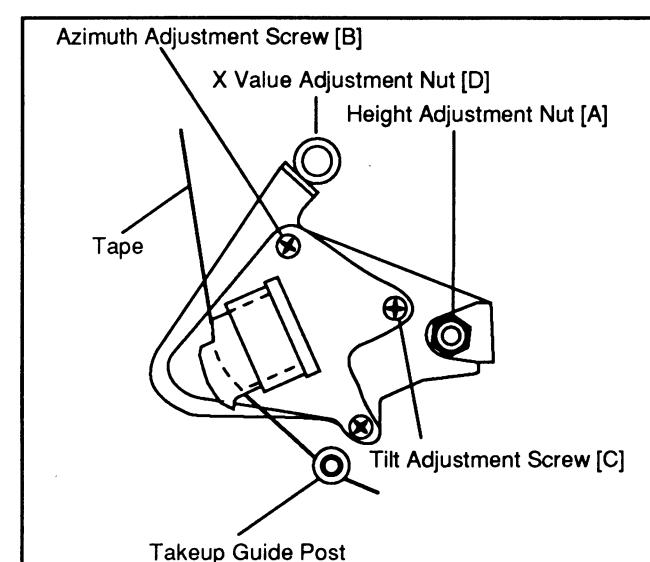

Fig. M6

**Note:** Play back a cassette tape. Looking at the lower edge of the Control Head with the tape in motion, make sure that the lower edge of the tape runs 0.15~0.25mm above the lower edge of the Control Head. If it does not run properly, turn Height Adjustment Nut [A] slightly in either direction as necessary to correct it. Turn clockwise, as viewed from the top, to lower the head and counterclockwise to raise it. (Refer to Fig. M6 and M7.)

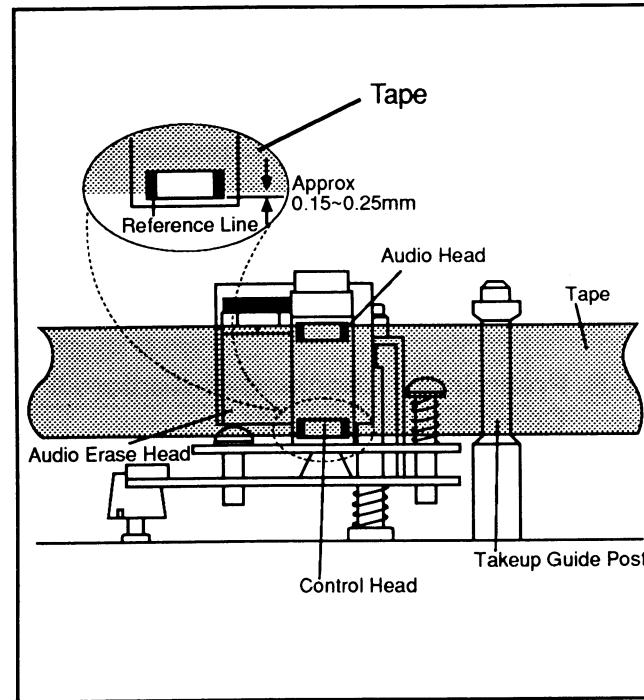

Fig. M7

### 1-C. Preliminary Checking of Tilt of Audio/Control Head

#### Purpose:

To check that the tape running is well stabilized. In particular, check that the signals on the tape are properly picked up by the Audio Head at the upper part and by the Control Head at the lower part.

#### Symptom of Misalignment:

If the tilt of the Audio/Control Head is poorly aligned, the tape will eventually be damaged.

Play back a cassette tape and check that there is no tape slack between Takeup Guide Post [4] in Fig. M3 and the Audio/Control Head. If there is any slack, align the Audio/Control Head by turning tilt adjustment screw [C] in Fig. M6 so that the tape has no slack.

### 1-D. Final Alignment of Audio/Control Head Height

#### Purpose:

To align the position and height of the Audio/Control Head so that it meets the tape tracks properly.

#### Symptom of Misalignment:

If the position of the Audio/Control Head is not properly aligned, the Audio S/N Ratio or Frequency Response will be poor.

1. Connect the oscilloscope to the audio output jack on the rear side of the deck.
2. Check that there is no tape slack between the Takeup Guide Roller and the Audio/Control Head. If there is any tape slack, remove it by turning Tilt Adjustment screw [C]. Then realign the height of the Guide Rollers (Refer to 1-A).
3. Play back the Color Bar (1kHz, Audio) on the alignment tape (F6-A) and check that the audio signal output level is 1kHz. Finally, adjust Height Adjustment Nut [A] so that the output level is at maximum.(Fig. M6, Fig. M8[b])
4. Adjust Azimuth Adjustment Nut [B] so that the output level on the AC Voltmeter is at maximum.(Fig. M6)

**Note:** Secure screw [C] with lock paint after realignment.

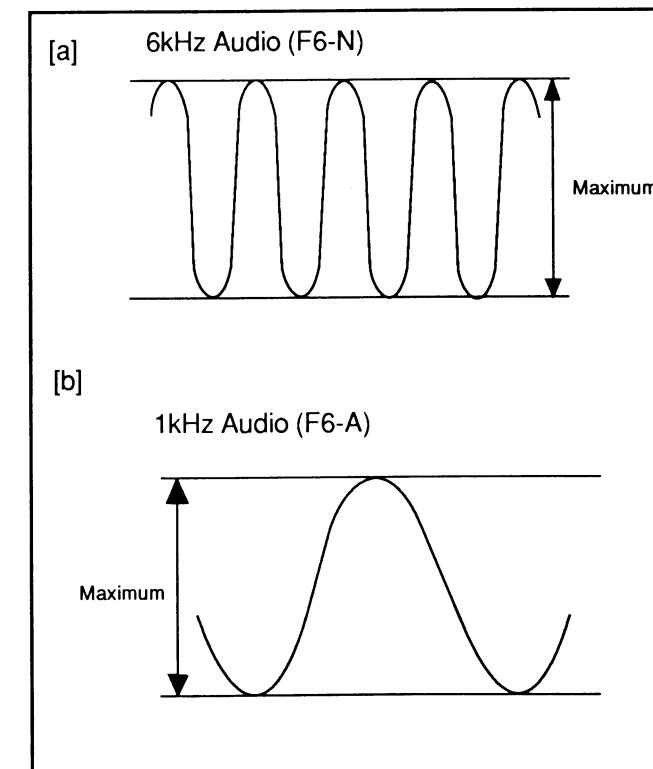

Fig. M8

### Azimuth Alignment of Audio/Control Head

#### Purpose:

To correct the Azimuth alignment so that the Audio/Control Head angle meets tape tracks properly.

#### Symptom of Misalignment:

If the position of the Audio/Control Head is not properly aligned, the Audio S/N Ratio or Frequency Response will be poor.

1. Connect the oscilloscope to the audio output jack on the rear side of the deck.
2. Play back the Gray Scale (6kHz, audio) on the alignment tape (F6-N), and adjust Height Adjustment Nut [A] so that the output level on the AC Voltmeter or the waveform of the oscilloscope is at maximum. (Fig. M6, Fig. M8[a])

### 1-E. X Value Alignment

#### Purpose:

To align the Horizontal Position of the Audio/Control Head.

#### Symptom of Misalignment:

If the Horizontal Position of the Audio/Control Head is not properly aligned, maximum envelope cannot be obtained at the Neutral mode of the Tracking Control Circuit.

1. Set the Tracking Control Circuit to the Neutral mode by pressing CH UP and DOWN buttons on VCR simultaneously.
2. Connect the oscilloscope to TP of C-PB on the Main CBA. Use TP of RF-SW as a trigger.
3. Play back the Gray Scale of the Alignment Tape (F6-N) and confirm that the PB FM signal is present.
4. Adjust X Value adjustment Nut [D] with the X Position Adj-Fixture so that the PB FM signal at the TP of C-PB or at the TP of A-OUT is maximum. (Fig.M9)

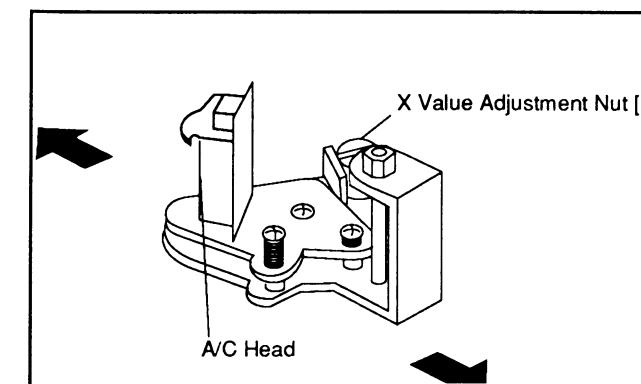

Fig. M9

### 1-F. Final Checking/Adjustment of Envelope Waveform

#### Purpose:

To achieve a satisfactory picture and precise tracking.

#### Symptom of Misalignment:

If the envelope output is poor, noise will appear in the picture. The tracking will then lose precision and the playback picture will be distorted by any slight variation of the Tracking Control.

1. Set the Tracking Control Circuit to the Neutral mode by pressing both CH UP and DOWN buttons on VCR simultaneously.
2. Connect the oscilloscope to TP of C-PB on the Main CBA. Use TP of RF-SW as a trigger.
3. Play back the Gray Scale on the Alignment Tape (F6-N). Adjust the height of Guide Rollers [2] and [3] (Fig.M3) watching the oscilloscope display so that the envelope becomes as flat as possible. If adjustment is required, turn the top of the Guide Roller with the Post Adjustment Screwdriver.

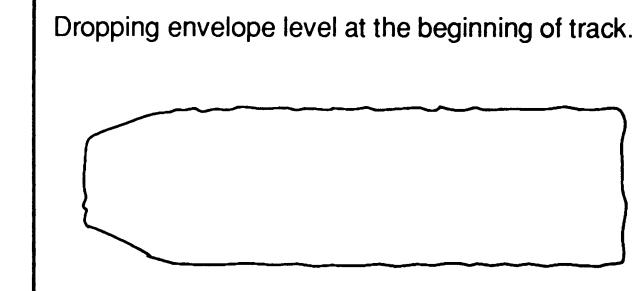

Fig. M10

4. When the envelope is as shown in Fig. M10, adjust the height of Guide Roller [2] (Refer to Fig.M3) so that the waveform looks like the one shown in Fig. M12.

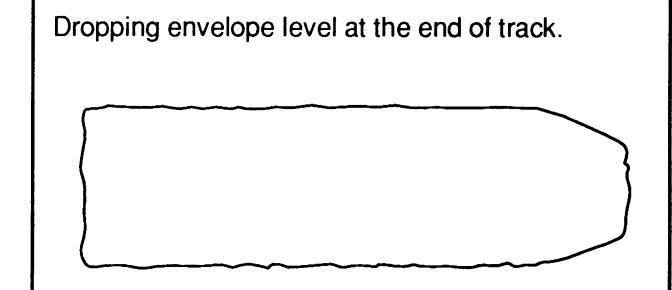

Fig. M11

5. When the envelope is as shown in Fig. M11, adjust the height of Guide Roller [3] (Refer to Fig.M3) so that the waveform looks like the one shown in Fig. M12.

# DISASSEMBLY/ASSEMBLY PROCEDURES OF DECK MECHANISM

Envelope is adjusted properly. (No envelope drop)

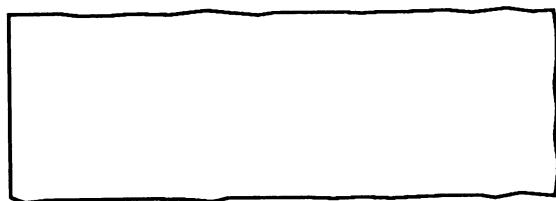

Fig. M12

6. When Guide Rollers [2] and [3] (Refer to Fig.M3) are aligned properly, there is no envelope drop either at the beginning or end of track as shown in Fig. M12.

**Note:** Upon completion of the adjustment of Guide Rollers [2] and [3] (Refer to Fig.M3), tighten the Lock Screws on these Guide Rollers [2] and [3], using a lock screw wrench. Then check the X VALUE by pushing the Tracking Control Up or Down buttons alternately, to check the symmetry of the envelope. If required, redo the "X VALUE ALIGNMENT." Secure screw [C] shown in Fig.M6 with lock paint.

## Main Mechanism

This procedure starts with the condition that the Cabinet Parts and Front Loading Assembly have been removed. (Refer to the Cabinet Disassembly Instructions of Section 1.) Also, all the following procedures for adjustment and parts replacement should be done in Stop mode. When reassembling, follow the steps in reverse order.

STEP /LOC. No.	START- ING No.	PART	REMOVAL		INSTALLATION ADJUSTMENT CONDITION
			Fig. No.	REMOVE/*UNHOOK/ UNLOCK/RELEASE/ UNPLUG/DESOLDER

# DECK MECHANICAL PARTS LIST

Ref.No.	Description	Part No.	Ref.No.	Description	Part No.
B 1	CHASSIS ASSEMBLY	0VSA05627	B 56	CASSETTE SLIDER R ASSEMBLY	0VSA04488
B 2	CYLINDER ASSEMBLY (N2116AN only)	0VM301585	B 58	CASSETTE DRIVE GEAR L ASSEMBLY	0VSA04494
B 2	CYLINDER ASSEMBLY (N2116XN only)	0VM201335	B 59	CASSETTE DRIVE GEAR R ASSEMBLY	0VSA04495
B 3	LDG MOTOR ASSEMBLY	0VSA04781	B 60	CASSETTE PLATE	0VM300779E
B 4	MOTOR HOLDER CALKING ASSEMBLY	0VM403364	B 67	FRONT DOOR OPENER SPRING	0VM403962
B 5	CASSETTE DRIVE LEVER ASSEMBLY	0VM403507	B 68	DRIVING GEAR REINFORCEMENT	0VM402961
B 6	PINCH ROLLER ARM ASSEMBLY	0VSA05848	B 72	UPPER PLATE	0VM201033
B 7	PINCH ARM ASSEMBLY	0VM402387	B 74	LUMINESCENCE PRISM or LUMINESCENCE PRISM(B)	0VM301291C 0VM301764F
B 8	PULLEY ASSEMBLY	0VSA05505	B 77	PRISM R	0VM301292
B 9	MOVING GUIDE S ASSEMBLY	0VSA05722	B 78	PRISM L	0VM301293D
B 10	MOVING GUIDE T ASSEMBLY	0VSA05723	B 79	EARTH SPRING	0VM403524
B 11	LOADING ARM T ASSEMBLY	0VSA05503	B 81	M LEVER HOLDER	0VM301717
B 12	LOADING ARM B ASSEMBLY	0VSA04215	B 83	RACK SPRING	0VM403894
B 13	LOADING ARM M ASSEMBLY	0VM404693	B 98	TG CAP or	0VM403733
B 14	PINCH ROLLER SPRING (U5)	0VM403949	B 102	FL RACK	0VM201022G
B 15	LUMIRROR WASHER 3.1X6X0.35	0VM403269	B 108	P.S.W F	0VM402629
B 16	CAM	0VM100453	B 121	WORM	0VM402429
B 21	LOADING BELT	0VM403432	B 122	P.S.W C	0VM402626
B 22	P.S.W(CUT)	0VM404679	B 123	P.S.W (WORM THRUST)	0VM403348
B 25	DEW SENSOR or DEW SENSOR	PCZHUMZHH003 PCZHUMZMS004	B 128	KICK ARM HOLDER	0VM301716
B 27	BAND BRAKE ASSEMBLY	0VSA04658	B 129	PRESS FIT BUSHING	0VM403652
B 28	MAIN BRAKE S ASSEMBLY	0VSA04212	B 130	KICK ARM	0VM404382
B 29	MAIN BRAKE T ASSEMBLY	0VSA04213	B 131	KICK ARM SPRING	0VM404424
B 30	T BRAKE ARM ASSEMBLY	0VSA04641	B 132	CLUTCH ASSEMBLY	0VSA05509
B 32	REEL BASE ASSEMBLY	0VSA04759	B 133	ARM IDLER ASSEMBLY	0VSA05512
B 34	MAIN LEVER ASSEMBLY	0VM402558	B 137	CLUTCH BUSHING	0VM404513
B 35	TAPE GUIDE ASSEMBLY	0VM402560	B 138	FRONT LOADING ASSEMBLY	0VDM05358
B 36	TENSION LEVER SP ASSEMBLY	0VSA04550	B 139	DOOR OPENER	0VM300780E
B 37	CAPSTAN MOTOR F2QKB92 or CAPSTAN MOTOR DFX67B5VWA1	MMDDDB5ZSJ002 MMDDB12MS001	B 140	DOOR OPENER SPRING	0VM402510
B 38	MODE CHANGE LEVER	0VM201234	B 141	PULLEY SUB ASSEMBLY	0VSA05612
B 39	M BRAKE(S)SPRING	0VM402579	B 142	SHAFT LOCK ASSEMBLY	0VSA04642
B 40	M BRAKE(S)LEVER	0VM300753	B 144	CLUTCH WASHER	0VM404428
B 41	S BRAKE ARM	0VM301759	L1011	SCREW, C-TIGHT M3X9	GPMC3090
B 42	M BRAKE T ARM SPRING	0VM402582	L1051	SCREW, S-TIGHT M2.6X6	GPMS9060
B 43	T BRAKE SPRING	0VM402580	L1053	SCREW, S-TIGHT M2.6X6	GPMS9060
B 44	HEAD ADJUST SPRING	0VM402567A	L1061	SCREW, S-TIGHT M2.6X4 (N2116XN only)	GPMS9040
B 45	M LEVER SPRING	0VM402570	L1081	SCREW, S-TIGHT 3X6	GBMS3060
B 46	TAPE GUIDE ARM SPRING	0VM402581	L1082	SCREW, S-TIGHT 3X6	GBMS3060
B 47	TAPE GUIDE ARM ADJUST SCREW	0VM403242	L1091	SCREW, S-TIGHT M3X6	GCMS3060
B 48	ADJUST NUT (B)	0VM404678A	L1101	SCREW, P-TIGHT 3X8	GBMP3080
B 49	BT DRIVE ARM	0VM300756K	L1102	SCREW, P-TIGHT 3X8	GBMP3080
B 50	BT DRIVE ARM SPRING	0VM402960	L1111	SCREW, P-TIGHT M3X8	GCMP3080
B 51	CHANGE ARM	0VM402441E	L1121	HEXAGON NUT M3	NHMN030
B 52	CAPSTAN BELT or CAPSTAN BELT	0VM402397 0VM403950	L1151	SCREW, SEMS M3X4	CPM33040
B 53	P.S.W 3.1X6X0.3T or P.S.W 3.1X6X0.4T or P.S.W 3.1X6X0.5T	0VM403737 0VM403738 0VM402625	L1221	SCREW, SPECIAL	0VM403688
B 54	GROUND BRUSH ASSEMBLY (N2116XN only)or GROUND BRUSH ASSEMBLY or GROUND BRUSH ASSEMBLY	0VM404524 0VM404534 0VM404827	L1231	SPACER SCREW ASSEMBLY	0VM403752
B 55	CASSETTE SLIDER L ASSEMBLY	0VSA04487	L1241	SCREW, P-TIGHT M2X6	GBMP2060

**Main (MCV-A) Model VIP-5000HC / VIP-5000A Only**

Ref. No. JACK BLOCK: 7500 series.

All voltage are DC voltage:  
PLAY mode with test tape F6-A.
