# 1. GENERAL SPECIFICATIONS

<b>A) System</b>			
1) CRT	:20" (19V), Inline gun, 90° Def. Tinted tube. ITC adjusted for Northern Hemisphere magnetic field.	9) Indicators On timer Stand by	:LED (RED) :LED (RED)
2) Color systems	:PAL/SECAM(Automatic Switching) NTSC 3.58/4.43MHz (Video in only)	10) Degauss 11) Speakers	:Automatic Degaussing :Oval 2"X3.5"X2pcs
3) Receiving channels	TV:System BG CCIR/OIRT+ [VHF L]... E2~S2 ch CATV(OSCAR) [VHF H]... S3~S20 ch [UHF].... 21~69 ch :System DK [VHF L]... R1~S2 ch [VHF H]... S3~S20 ch [UHF].... 21~69 ch (60 stations can be memorized )	<b>B) IR Remote Control</b>	:<31keys> :Stand by :0/AV 1~9 :Channel up/Page up :Channel down/Page down :Mute :Display :Channel recall/Time set :Time select (Clock/ON Timer/OFF Timer /Sleep) :Picture select (Bright/Contrast/Color/English /Polish)
4) Tuning system	:Voltage synthesizer		:Control up/Volume up/Hour :Control down/Volume down/Minute
5) Controls	Channel selector (up/down) :Push switch Sound volume (up/down) :Push switch Stand by :Push switch Tuning (up/down) :Push switch Program :Push switch Auto memory/Band :Push switch		:Text/Mix :Reveal :Hold :Expand :Update :Subcode :Index :Red, Green, Yellow, Cyan
6) Connectors	Antenna :75 ohm IEC jack Video in/out :BNC jack X2 Audio in/out :RCA jack X2 21pin scart jack	<b>C) Mechanical</b>	:480(W)X458(D)X450(H)mm
7) Onscreen displays	:Channel :Volume :Brightness :Contrast :Color :Clock :Timer ON/OFF :Band position :Sleep timer (10~90 Minute) :Tuning Indicator	1) Dimension 2) Cabinet 3) Weight 4) Packing weight	:All plastic cabinet :19Kg :22Kg
8) TELETEXT	Prepared Languages :English :German :Polish :Rumanian :Hungarian	<b>D) Power supply</b>	1) Power requirement :AC 220V/50Hz 2) Power consumption :90W 3) AC cord :6ft PVC cord with IEC type C PLUG
		<b>E) Others</b>	1) Regulation :IEC-65 Passable
		<b>F) Accessories</b>	1) Remote control unit 2) 2-AAA batteries for remote control unit 3) Instruction book 4) VHF Antenna 5) Matching adopter

## 2. PERFORMANCE SPECIFICATIONS

### <Tuner>

- \* ANT input ..... 75 ohm unbal. IEC connector
- \* Reference level ..... 300mVp-p at Video output.
- \* Test input signal ..... 400Hz, 30% modulation.

Description	Condition	Unit	Nominal	Limit
1. Peak picture sens.	VHF	dBuV	20	30
	UHF		30	40
2. AFT pull in range *input 80dBu	MHz	±1.0		±0.7
3. Intermediate freq.	Picture Sound	MHz	38.0 31.5(D/K) 32.5(B/G)	
4. Intercarrier freq.		MHz	6.5(D/K) 5.5(B/G)	

### <Deflection>

Description	Condition	Unit	Nominal	Limit
1. Deflection freq.	Horizontal (PAL/SECAM) (NTSC)	KHz	15.625	
	Vertical (PAL/SECAM) (NTSC)	Hz	15.75 50 60	
2. Linearity	Horizontal	%		±15
	Vertical			±15
3. High voltage		KV	25	

### <Video/Chroma>

Description	Condition	Unit	Nominal	Limit
1. Misconvergence	Center	mm		0.4
	Corner			2.0
	Side			1.5
2. Over scan	Horizontal	%	10	
	Vertical		10	
3. Color temperature		°K	8000-10MPCD	
4. Resolution	Horizontal	Line	300	
	Vertical	Line	300	
5. Brightness		ft-L	35	25

### <Audio>

\* All items are measured across 16ohm resistor at speaker output terminal.

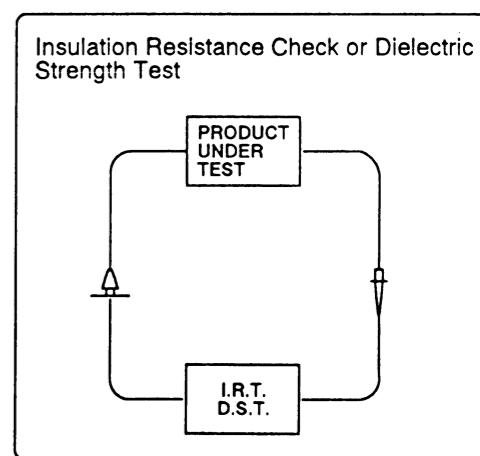

Description	Condition	Unit	Nominal	Limit
1. Audio output power	10%THD	W	1.2	0.8
2. Audio distortion	500mW	%	2	5
3. Audio freq. response	-6dB	Hz		100-6K

## 3. SAFETY PRECAUTIONS

1. Before returning a product to the customer, always make a safety check of the entire product, including, but not limited to, the following items.

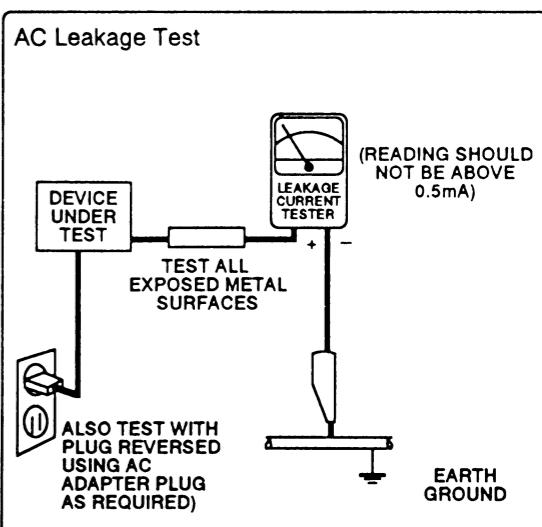

- a. Be sure that no built-in protective devices are defective and/or have been defeated during servicing.
  - (1) Protective shields are provided on this chassis to protect both the technician and the customer. Correctly replace all missing protective shields, including any removed for servicing convenience.
  - (2) When reinstalling the chassis and/or other assembly in the cabinet, be sure to put back in place all protective devices, including, but not limited to, nonmetallic control knobs, insulating fishpapers, adjustment and compartment covers/shields, and isolation resistor/capacitor networks. Do not operate this product or permit it to be operated without all protective devices correctly installed and functioning. Servicers who defeat safety features of fall to perform safety checks may be liable for any resulting damage.
- b. Be sure that there are no cabinet openings through which an adult or child might be able to insert their finger(s) and contact a hazardous voltage. Such opening(s) include, but no limited to, (1) spacing between the picture tube and the cabinet mask, (2) excessively wide cabinet ventilation slot(s), and (3) an improperly fitted and/or incorrectly secured cabinet back cover.

C-1. **Insulation Resistance Check** - With the product AC plug removed from AC source, connect an electrical jumper across the two AC plug prongs tied together and touch the Insulation Resistance Tester (I.R.T.) lead. Other I.R.T. lead contact accessible metal parts (antenna, handle bracket, metal cabinet, screw heads, metallic overlays, control shafts, etc.) If the measured resistance is less than 10.0 megohm, an abnormality exists that must be corrected before the product is returned to the customer. Repeat this test with the product AC switch in the off position, if applicable.

C-2. **Dielectric Strength Test** - With the product AC plug removed from AC source, connect an electrical jumper across the two AC plug prongs tied together and touch the Dielectric Strength tester (D.S.T.) lead. Other D.S.T. lead contact accessible metal parts (antenna, handle bracket, metal cabinet, screw heads, metallic overlays, control shafts, etc.) If the product does not withstand dielectric strength test under condition **AC 3,000V, 1 min., cutoff current max 10 milli-ampere**, an abnormality exists that must be corrected before the product is returned to the customer. Repeat this test with the product AC switch in the off position, if applicable.

d. **Leakage Current Hot Check** - With the product completely reassembled, plug the AC line cord directly into an AC outlet. (Do not use an isolation transformer during this test.) Use a leakage current tester or an appropriate metering system. With the product AC switch first in the on position and then in the off position, measure from live polarity side to all exposed metal parts of the product (antenna, handle bracket, metal cabinet, screw heads, metallic overlays, control shafts, etc.), especially any exposed metal parts that offer an electrical return path to the chassis. Any current measured must not exceed 0.5 milli-ampere. Reverse the product power cord plug in the outlet and repeat this test.

ANY MEASUREMENTS NOT WITHIN THE LIMITS SPECIFIED HEREIN INDICATE A POTENTIAL SHOCK HAZARD THAT MUST BE ELIMINATED BEFORE RETURNING THE PRODUCT TO THE CUSTOMER OR BEFORE CONNECTING THE ANTENNA OR ACCESSORIES.

- e. **X - Radiation and High Voltage Limits** - Because the picture tube is the primary potential source of X - radiation in solid - state TV receiver, it is specially constructed to prohibit X - radiation emissions. For continued X - radiation protection, the replacement picture tube must be the same type as specified parts list in this manual. Also, because the picture tube shields and mounting hardware perform an X - radiation protection function, they must be correctly in place. High voltage must be measured each time servicing is performed that involves B+, horizontal deflection or high voltage. Correct operation of the X - radiation protection circuits also must be reconfirmed each time they are serviced. (X - radiation protection circuits also may be called "horizontal disable" or "hold - down".) Read and apply the high voltage limits and, if the chassis is so equipped, the X - radiation protection circuit specifications given on product labels and in the Product Safety & X - Radiation Warning note on the service data chassis schematic. High voltage is maintained within specified limits by close - tolerance safety - related components/adjustments in the high voltage circuit. If high voltage exceeds specified limits, check each component specified on the chassis schematic and take corrective action.
2. Read and comply with all caution and safety-related notes on or inside the receiver cabinet, on the receiver chassis, or on the picture tube.
3. **Design Alteration Warning** - Do not alter or add to the mechanical or electrical design of this TV receiver. Design alterations and additions, including, but not limited to circuit modifications and the addition of items such as auxiliary audio and/or video output connections, might alter the safety characteristics of this receiver and create a hazard to the user. Any design alterations or additions may void the manufacturer's warranty and may make you, the servicer responsible for personal injury or property damage resulting therefrom.
4. **Picture Tube Implosion Protection Warning** - The picture tube in this receiver employs integral implosion protection. For continued implosion protection, replace the picture tube only with one of the same type number. Do not remove, install, or otherwise handle the picture tube in any manner without first putting on shatterproof goggles equipped with side shields. People not so equipped must be kept safely away while picture tubes are handled. Keep the picture tube away from your body. Do not handle the picture tube by its neck. Some "in-line" picture tubes are equipped with a permanently attached deflection yoke; because of potential hazard, do not try to remove such "permanently attached" yokes from the picture tube.
5. **Hot Chassis Warning** - a. Some TV receiver chassis are electrically connected directly to one conductor of the AC power cord and may be safety-serviced without an Isolation transformer only if the AC power plug is inserted so that the chassis is connected to the ground side of the AC power source. To confirm that the AC power plug is inserted correctly, with an AC voltmeter measure between the chassis and a known earth ground. If a voltage reading in excess of 1.0V is obtained, remove and reinsert the AC power plug in the opposite polarity and again measure the voltage potential between the chassis and a known earth ground.  
b. Some TV receiver chassis normally have 85V AC(RS) between chassis and earth ground regardless of the AC plug polarity. These chassis can be safety-serviced only with an isolation transformer inserted in the power line between the receiver and the AC power source, for both personnel and test equipment protection.  
c. Some TV receiver chassis have a secondary ground system in addition to the main chassis ground. This secondary ground system is not isolated from the AC power line. The two ground systems are electrically separated by insulating material that must not be defeated or altered.
6. Observe original lead dress. Take extra care to assure correct lead dress in the following areas: a. near sharp edges. b. near thermally hot parts-be sure that leads and components do not touch thermally hot parts, c. the AC supply, d. high voltage, and e. antenna wiring. Always inspect in all areas for pinched, out of place, or trayed wiring. Do not change spacing between components, and between components and the printed-circuit board. Check AC power cord for damage.
7. Components, parts, and/or wiring that appear to have overheated or are otherwise damaged should be replaced with components, parts, or wiring that meet original specifications. Additionally, determine the cause of overheating and/or damage and, if necessary, take corrective action to remove any potential safety hazard.

**8. PRODUCT SAFETY NOTICE** - Some electrical and mechanical parts have special safety-related characteristics which are often not evident from visual inspection, nor can the protection they give necessarily be obtained by replacing them with components rated for higher voltage, wattage, etc. Parts that have special safety characteristics are identified by a ( $\Delta$ ) on schematics and in parts lists. Use of a substitute replacement that does not have the same safety characteristics as the recommended replacement part might create shock, fire, and/or other hazards. Products Safety is under review continuously and new instructions are issued whenever appropriate.

Prior to shipment from the factory, our products are strictly inspected to conform with the recognized product safety and electrical codes of the countries in which they are to be sold. However, in order to maintain such compliance, it is equally important to implement the following precautions when a set is being serviced.

## Precautions during Servicing

1. Parts Identified by the  $\Delta$  symbol are critical for safety. Replace only with parts number specified.
2. In addition to safety, other parts and assemblies are specified for conformance with regulations applying to spurious radiation. These must also be replaced only with specified replacements. Examples: RF converters, RF cables, noise blocking capacitors, and noise blocking filters, etc.
3. Use specified internal wiring. Note especially:
  - 1) Wires covered with PVC tubing
  - 2) Double insulated wires
  - 3) High voltage leads
4. Use specified insulating materials for hazardous live parts. Note especially:
  - 1) Insulation Tape
  - 2) PVC tubing
  - 3) Spacers
  - 4) Insulators for transistors.
5. When replacing AC primary side components (transformers, power cords, etc.), wrap ends of wires securely about the terminals before soldering.
6. Observe that wires do not contact heat producing parts (heatsinks, oxide metal film resistors, fusible resistors, etc.)
7. Check that replaced wires do not contact sharp edged or pointed parts.
8. When a power cord has been replaced, check that 10 – 15 kg of force in any direction will not loosen it.
9. Also check areas surrounding repaired locations.
10. Use care that foreign objects (screws, solder droplets, etc.) do not remain inside the set.
11. Crimp type wire connector  
When replacing the power transformer in sets where the connections between the power cord and power transformer primary lead wires are performed using crimp type connectors, in order to prevent shock hazards, perform carefully and precisely the following steps.  
Replacement procedure
  - 1) Remove the old connector by cutting the wires at a point close to the connector.  
Important: Do not re-use a connector (discard it).
  - 2) Strip about 15 mm of the insulation from the ends of the wires. If the wires are stranded, twist the strands to avoid frayed conductors.
  - 3) Align the lengths of the wires to be connected. Insert the wires fully into the connector.
  - 4) Use the crimping tool to crimp the metal sleeve at the center position.  
Be sure to crimp fully to the complete closure of the tool.
12. When connecting or disconnecting the VCR connectors; First, disconnection the AC plug from AC supply socket.

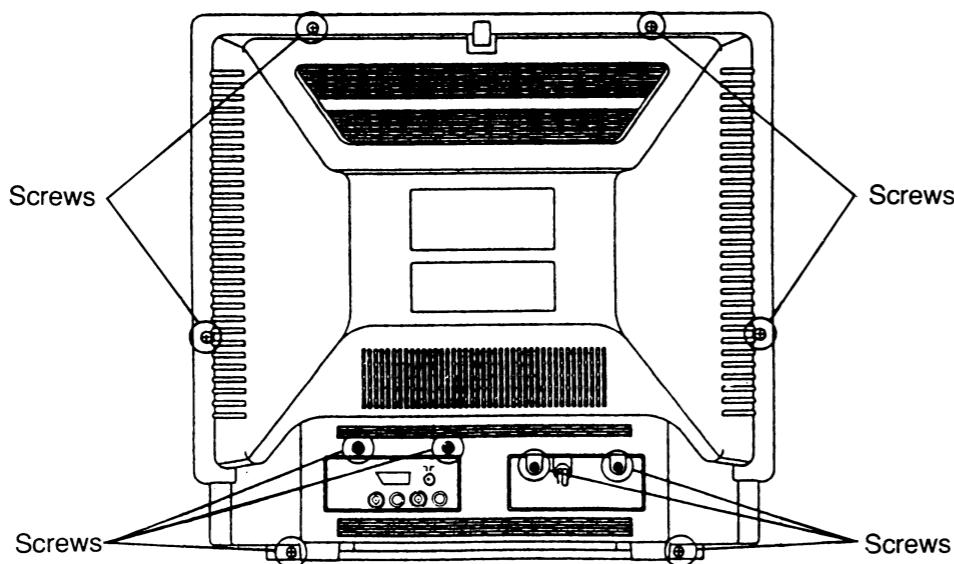

## Safety Check after Servicing

1. **Insulation resistance test**  
Confirm the specified insulation resistance or greater between power cord plug prongs and externally exposed parts of the set (RF terminals, video and audio output terminals, etc.).
2. **Dielectric strength test**  
Confirm specified dielectric strength or greater between power cord plug prongs and exposed accessible parts of the set (RF terminals, antenna terminals, video and audio output terminals, etc.).
3. **Clearance distance**  
When replacing primary circuit components, confirm specified clearance distance.
4. **Leakage current test**  
Confirm specified or lower leakage current between power cord plug prongs (earth ground) and externally exposed parts (RF terminal, video and audio input and output terminals, etc.).

## 4. DISASSEMBLY INSTRUCTIONS

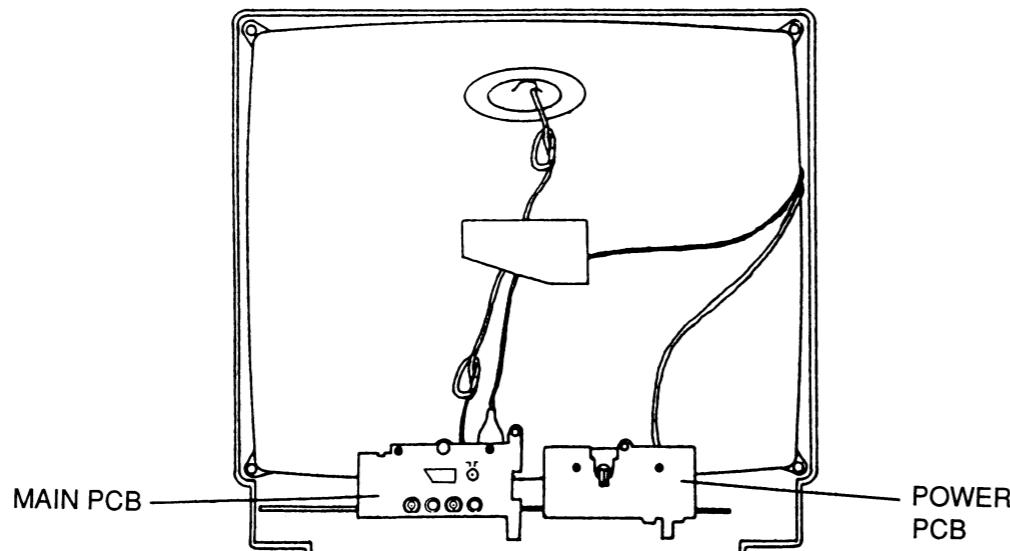

### 1. REAR CABINET REMOVAL

- 1-1. Disconnect the AC power cord.
- 1-2. Remove 10 screws from the rear cabinet.
- 1-3. To re-install, reverse the above procedure.

### 2. MAIN PCB/POWER PCB ASS'Y REMOVAL

- 2-1. Unplug the AC power cord, remove the rear cabinet.
- 2-2. Disconnect all connectors from MAIN PCB to POWER PCB.
- 2-3. Pull the MAIN PCB and POWER PCB to back-ward.
- 2-4. To re-install, reverse the above procedure.

## 5. ELECTRICAL ADJUSTMENT

Electrical adjustments are required after replacing circuit components and certain mechanical parts. It is important to perform these adjustments only after all repairs and replacements have been completed. Also, do not attempt these adjustments unless the proper equipment is available.

### CAUTION !

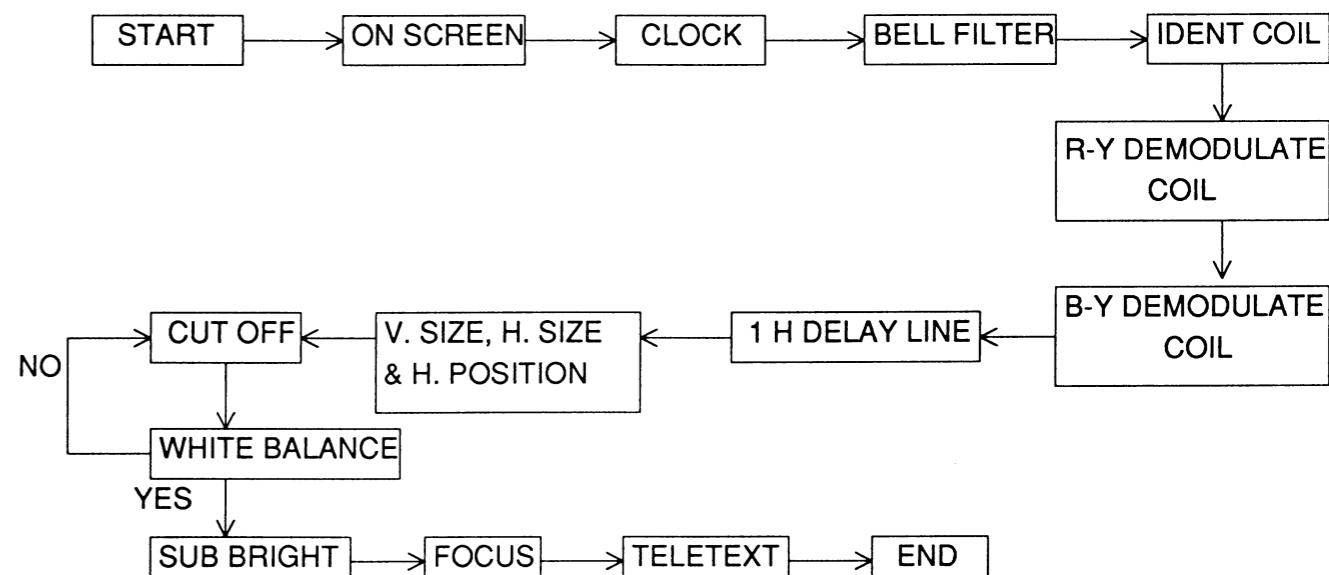

Make sure to connect all wires and connectors perfectly, when you connect AC Plug to perform the electrical adjustment in conditions that equipment is not assembled completely. Otherwise some parts will be damaged.

### TEST EQUIPMENT REQUIRED

1. Oscilloscope: Dual Trace with 10:1 probe
2. Monoscope
3. PAL and SECAM Pattern Generator
4. Color Analyzer

### STANDARD NOTES FOR ADJUSTMENT

1. Operate the equipment more than 20 minimum before adjustment.
2. Face the equipment to the East.
3. Degauss the CRT using the degaussing coil.

## 1. ON SCREEN ADJUSTMENT

### Purpose:

To display character ON SCREEN correctly.

### Symptom of Incorrect adjustment

Character ON SCREEN is incorrect position.

Test Point	Adjustment Point	Mode	Input
	L22	---	SECAM Color Bar
Tape	Equipment		Spec
---	SECAM Pattern Generator Oscilloscope (5mV/div, 10ms/div -AC)		See Reference Notes below.

### Reference Notes:

1. Set the COLOR, CONTRAST and BRIGHT controls to center detent position.
2. Input SECAM Color Bar signal to Video In.
3. Indicate ON SCREEN (Bar shape) by PICTURE SELECT KEY.
4. Adjust L22 so that the distance between both ends of ON SCREEN and escussion become equal.

## 2. CLOCK ADJUSTMENT

### Purpose :

To adjust internal clock of microprocessor.

### Symptom of Incorrect adjustment

Clock become slow and fast.

Test Point	Adjustment Point	Mode	Input
IC3 Pin 17 IC3 Pin 20	C143	---	SECAM Color Bar
Tape	Equipment		Spec
---	SECAM Pattern Generator Frequency Counter		See Reference Notes below.

### Reference Notes:

1. Connect Pins 17 and 20 of IC3 using a Diode as shown.
2. Connect the AC cord.
3. Connect Frequency Counter to Pins 17 and 20 of IC3.
4. Adjust C143 for 87381.  $3334 \pm 0.5\text{Hz}$ , reading on the frequency counter.

### Note :

After adjustment, remove Diode.

## 3. BELL FILTER ADJUSTMENT (FOR SECAM )

### Purpose:

To adjust the center frequency of SECAM Bell Filter.

### Symptom of Incorrect adjustment

The color will be reversed when the SECAM signal is entered.

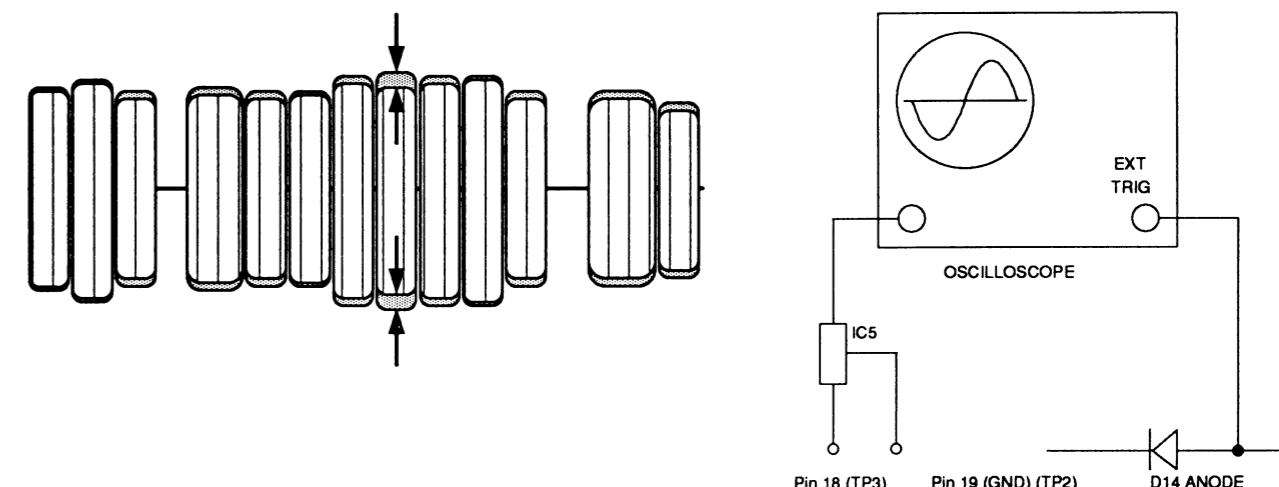

Test Point	Adjustment Point	Mode	Input
IC5 Pin 18 (TP6) IC5 Pin 19 (GND) (TP2)	L12 (Bell Filter)	---	SECAM Color Bar
Tape	Equipment		Spec
---	SECAM Pattern Generator Oscilloscope (5mV/div, 10μs/div -AC)		See Reference Notes below.

### Reference Notes:

1. Input SECAM Color Bar signal to Video In or RF (make sure to receive at the best synchronized point).
2. The CONTRAST, BRIGHT, COLOR control to center.
3. Connect oscilloscope as shown below.
4. Set oscilloscope to 10 : 1 probe, AC 5mV/div and Range 10μs/div.
5. Adjust L12 with core driver to flat waveform.

### caution !

Do not use metal screw driver to avoid the parts are broken.

## 4. IDENT COIL ADJUSTMENT (FOR SECAM )

### Purpose:

To adjust the peak value of SECAM IDENT signal.

### Symptom of Incorrect adjustment

The display is not colored when the SECAM signal is entered.

Test Point	Adjustment Point	Mode	Input
IC5 Pin 23 (TP1)	L10 IDENT COIL	---	SECAM Color Bar
Tape	Equipment	Spec	
---	SECAM Pattern Generator Oscilloscope (0.2V/div, 5μs/div -DC) Digital Voltage meter	See Reference Notes below.	

### Reference Notes:

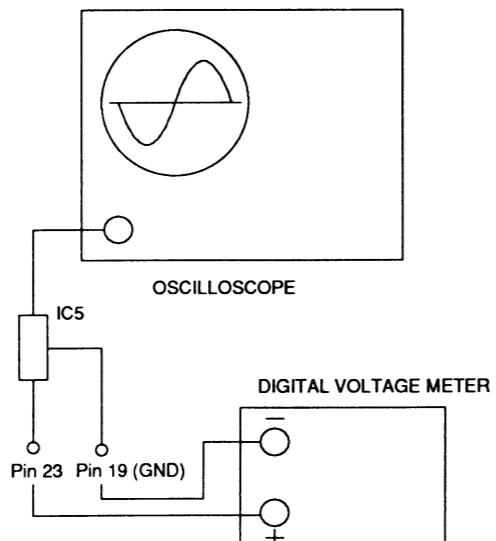

1. Input SECAM Color Bar signal to Video In or RF (make sure to receive at the best synchronized point).
2. Set oscilloscope to 10 : 1 probe, AC 0.2V/div and Range 5μs/div.
3. Set the ground (OV) scale to the bottom of screen.
4. Turn the CONTRAST, BRIGHT and COLOR control to center.
5. Connect equipments as shown below.
6. Adjust L10 with core driver to peak DC voltage.

### CAUTION !

Do not use metal screw driver to avoid the parts are broken.

### Note:

L10 : TV Main CBA

## 5. R-Y DEMODULATE COIL ADJUSTMENT (FOR SECAM )

### Purpose:

To adjust the level of R-Y color difference signal.

### Symptom of Incorrect adjustment

The R, G and B will be unbalanced.

Test Point	Adjustment Point	Mode	Input
IC5 Pin 60 (TP5)	L15	---	SECAM Color Bar
Tape	Equipment	Spec	
---	SECAM Pattern Generator Oscilloscope (10μV/div, 5μs/div -AC)	See Reference Notes below.	

### Reference Notes:

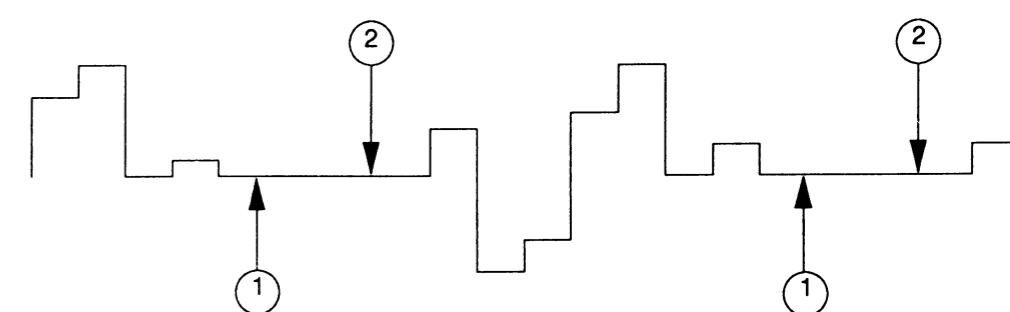

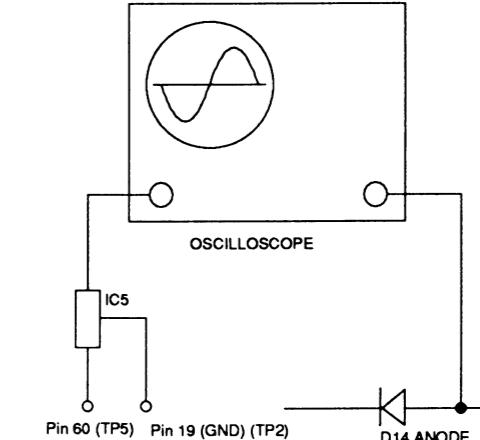

1. Input SECAM Color Bar signal to Video In or RF (make sure to receive at the best synchronized point).
2. Set oscilloscope to 10 : 1 probe, AC 10μV/div and Range 5μs/div.
3. Set the ground (OV) scale to the bottom of screen.
4. Turn the CONTRAST, BRIGHT and COLOR control to center.
5. Connect oscilloscope as shown below.
6. Adjust L15 with core driver to meet same level with ② (blanking) and ① (white) as following drawing.

### CAUTION !

Do not use metal screw driver to avoid the parts are broken.

### Note:

L15 : TV Main CBA

## 6. B-Y DEMODULATE COIL ADJUSTMENT (FOR SECAM )

### Purpose:

To adjust the level of B-Y color difference signal.

### Symptom of Incorrect adjustment

The R, G and B will be unbalanced.

Test Point	Adjustment Point	Mode	Input
IC5 Pin 62 (TP4)	L16 B-Y DEMODULATE COIL	---	SECAM Color Bar
IC5 Pin 19 (GND) (TP2)			
Tape	Equipment		Spec
---	SECAM Pattern Generator Oscilloscope (10mV/div, 5μs/div - AC)	See Reference Notes below.	

### Reference Notes:

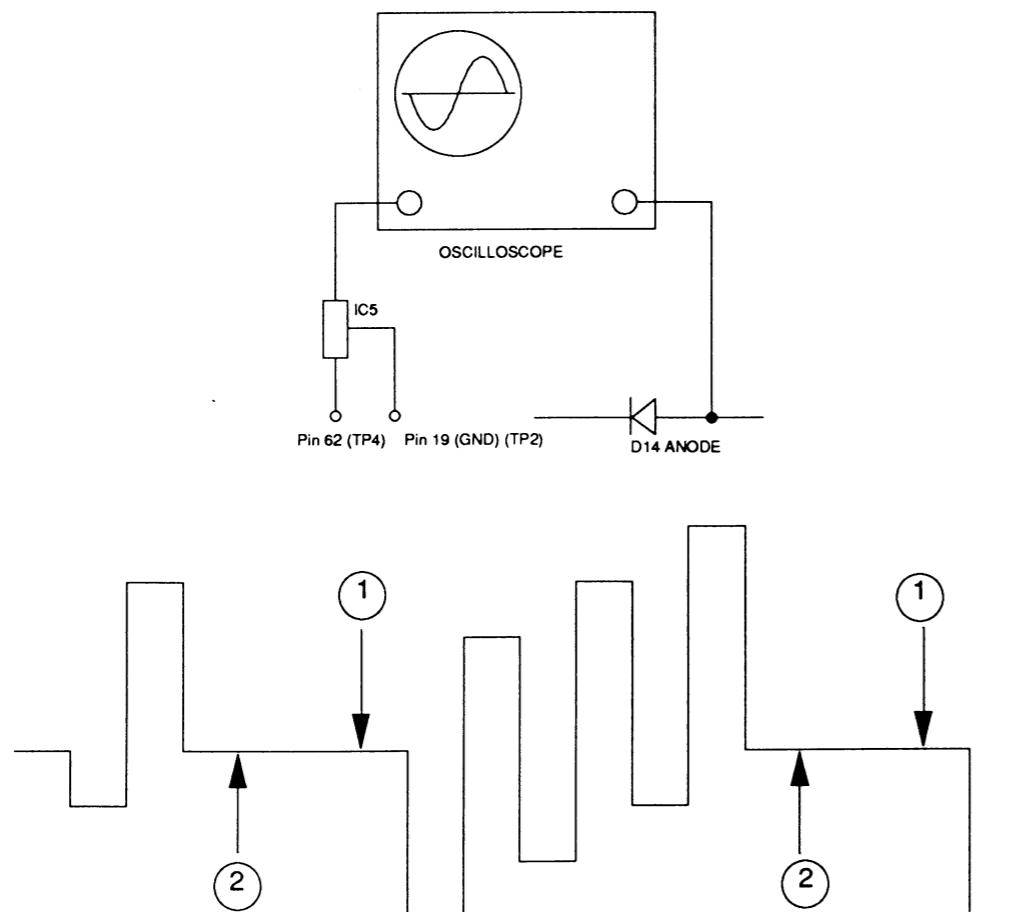

1. Input SECAM Color Signal to Video In or RF (make sure to receive at the best synchronized point).
2. Set oscilloscope to 10 : 1 probe, AC 10mV/div and Range 5μs/div.
3. Set the ground (OV) scale to the bottom of screen.
4. Turn the CONTRAST, BRIGHT, COLOR control to center.
5. Connect oscilloscope as shown below.
6. Adjust L16 with core driver to meet same level with a (blanking) and i (white) as following drawing.

### CAUTION !

Do not use metal screw driver to avoid the parts are broken.

### Note:

L16 : TV Main CBA

## 7. 1 H DELAY LINE ADJUSTMENT

### Purpose:

To get correct 1H delay line when the PAL signal is entered.

### Symptom of incorrect adjustment

The Anti-PAL signal part is colored when the Philips pattern is entered.

Each scanning line is colored on the color bar.

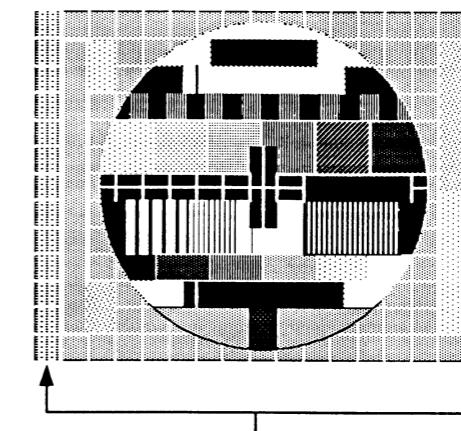

Test Point	Adjustment Point	Mode	Input
IC5 Pin 62 (TP4)	VR9	---	Philips Pattern
IC5 Pin 19 (GND) (TP2)	L14		
Tape	Equipment		Spec
---	Pattern Generator Oscilloscope	See Reference Notes below.	

### Reference Notes:

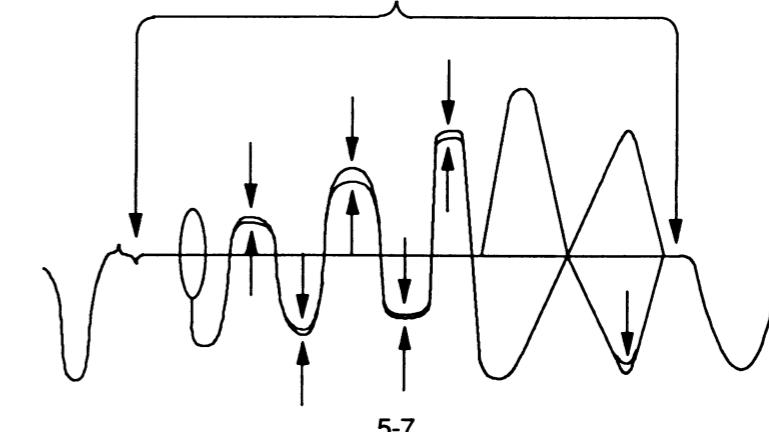

1. Input Philips Pattern.
2. Connect oscilloscope to TP2 (GND) and TP4 (or Synchronize the oscilloscope externally through the D14 anode.)
3. Adjust VR9, L14 so that the amplitude at Anti-PAL signal part becomes minimum (no color) and the waveform at the Color Bar part is not seen in double ("Venetian Blind" does not appear at the Color Bar signal part).

### Note:

VR9, L14 : TV Main CBA

Anti-PAL Signal

## 8. V. SIZE, H. SIZE and H. POSITION ADJUSTMENT

### Purpose:

To get correct vertical height of screen image.

### Symptom of Incorrect adjustment.

Vertical height of screen image may not be properly displayed.

Test Point	Adjustment Point	Mode	Input
---	VR11 (V-SIZE) L27 (H.SIZE) VR13 (H. POSITION)	---	Monoscopic Pattern
Tape	Equipment	Spec	
---	Monoscope	90% +5/0	

### Reference Note:

Adjust VR11 and VR13 and L27 so that vertical size, horizontal size and horizontal position of the Monoscopic Pattern will be 90% of display size and the circle is round and placed on the center of the screen.

### Note:

L27, VR11, VR13 : TV Main CBA

## 9. CUT OFF ADJUSTMENT

### Purpose:

To adjust the beam current of R, G, B and screen voltage.

### Symptom of Incorrect adjustment

White Color may be reddish, greenish or bluish.

When the screen voltage is too high, the scanning line is appeared on the screen.

Test Point	Adjustment Point	Mode	Input
---	VR1, VR3, VR4 SCREEN VR Driver VR	---	White Scale ( APL 100 %)
Tape	Equipment	Spec	
---	Pattern Generator	See Reference Notes below.	

### Reference Notes:

1. Input White Scale (APL 100%). Set sub-brightness VR to center.
2. Turn the SCREEN VOL control fully counterclockwise to minimum position.
3. Set Driver VR, VR2 and VR5 to center.
4. Set Service Switch (SW1) to ON position.
5. Slowly turn the SCREEN VOL to a point where either one of RED, GREEN or BLUE (horizontal bar) just illuminates.
6. Turn each VR1 (BLUE), VR3 (GREEN) and VR4 (RED) control to get white horizontal bar.
7. Turn off the Service Switch. (R. Drive-VR5 and B. Drive-VR2 are set to the center position)

### Note:

VR1-VR5 : TV CRT CBA

SCREEN VR, Driver VR : TV MAIN CBA

## 10. WHITE BALANCE ADJUSTMENT

### Purpose:

To mix red, green and blue beams correctly for pure white.

### Symptom of Incorrect adjustment

White becomes bluish or reddish.

Test Point	Adjustment Point	Mode	Input
---	VR1, VR2, VR3, VR4, VR5	---	White Signal (APL 100 %)
Tape	Equipment	Spec	
---	Pattern Generator Color Analyzer	See Reference Notes below.	

### Reference Notes:

1. Input APL 100% white.
2. After aging for 20-30 minutes, demagnetize the tube surface (CRT) with a demagnetizer.
3. Set Color Analyzer to the CHROMA mode, and after zero point calibration, bring the optical receptor into close contact with the center on the tube surface (CRT). Then, adjust R. Drive (VR2) and B. Drive (VR5) so that the respective chroma temperatures become 8000 °K - 10 MPCD. (x : 0.300 / y : 0.290)
4. Turn Service Switch ON.
5. At this time, check that the horizontal line is white. If the horizontal line is not white, adjust the B. CUT OFF (VR1) and R. CUT OFF (VR4) to get white horizontal bar. G. CUT OFF (VR3) should be fixed without adjusting.
6. Turn Service Switch OFF, and using the color analyzer, check that the color temperature read is preset value.
7. Repeat steps 3, 4, 5 and 6 above, and adjust so that the settings of color temperature and horizontal line are at their best.

Note 1: Be sure the tube surface faces east.

Note 2: Make this adjustment under European magnetic field. (Vertical : 0.44G / Horizontal : 0.18G).

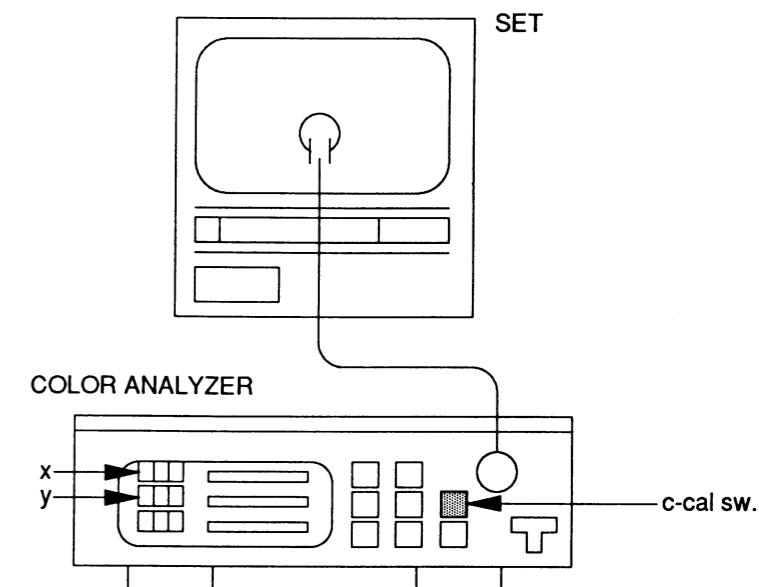

Note 3: Already adjusted SUB BRIGHT, V-SIZE, H. SIZE, H. POSITION, CUT OFF and 1H DELAY LINE.

Note 4: The allowable range during color temperature adjustment should be ±5% Max.

x : 0.288-0.312      y : 0.278-0.302

### Note:

VR1-VR5 : TV CRT CBA

## 11. SUB BRIGHT ADJUSTMENT

### Purpose:

To get proper brightness.

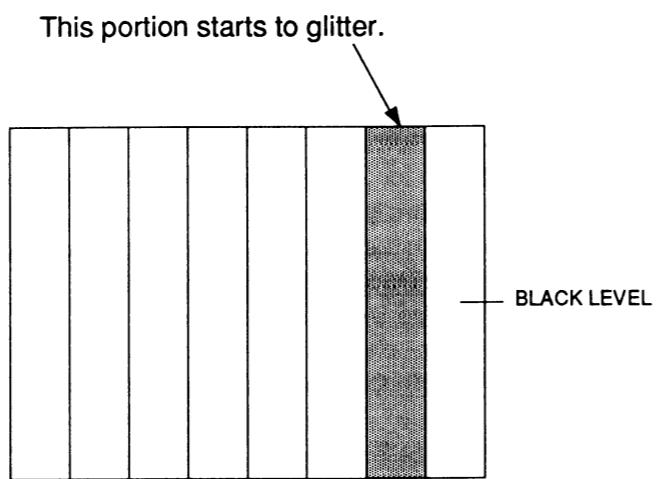

### Symptom of Incorrect adjustment

Proper brightness cannot be obtained by adjusting the Bright Control.

Test Point	Adjustment Point	Mode	Input
---	VR12 (SUB. BRT)	---	Gray Scale
Tape	Equipment		Spec
---	Pattern Generator	See Reference Notes below.	

### Reference Notes:

1. Input the 8-step graduated Gray Scale.
2. Set CONT VR and BRIGHT VR to center.
3. Adjust VR12 to a point where the one level higher than the black-level starts flashing. (2nd level from the right)
4. If you have Color Analyzer, proceed to next step.
5. Fit the receiver of Color Analyzer to the portion on the screen where is described in step 3 and adjust VR12 to be obtained  $Y=0.5 +0.2 / -0.1 \text{ft-L}$

### Note:

VR12 : TV Main CBA

## 12. FOCUS ADJUSTMENT

### Purpose:

To get correct focus.

### Symptom of Incorrect adjustment:

Blurred image is shown on the display.

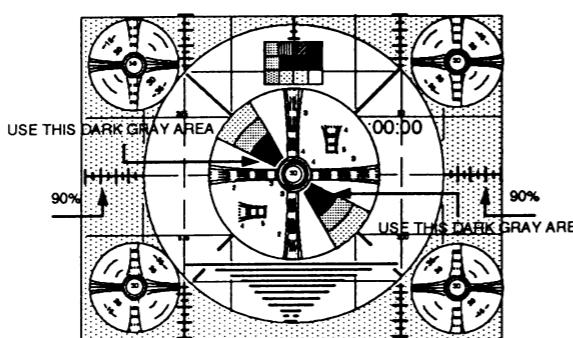

Test Point	Adjustment Point	Mode	Input
---	Focus VR (FBT)	---	Monoscopic Pattern
Tape	Equipment		Spec
---	Monoscope	Clear picture	

### Reference Note:

Set both Contrast and Brightness controls to the middle position prior to the adjustment.

### Note:

Focus VR (FBT) : TV Main CBA

## 13. TELETEXT ADJUSTMENT

### Purpose:

To synchronize TELE TEXT signal.

### Symptom of Incorrect adjustment

TELE TEXT is not displayed synchronously.

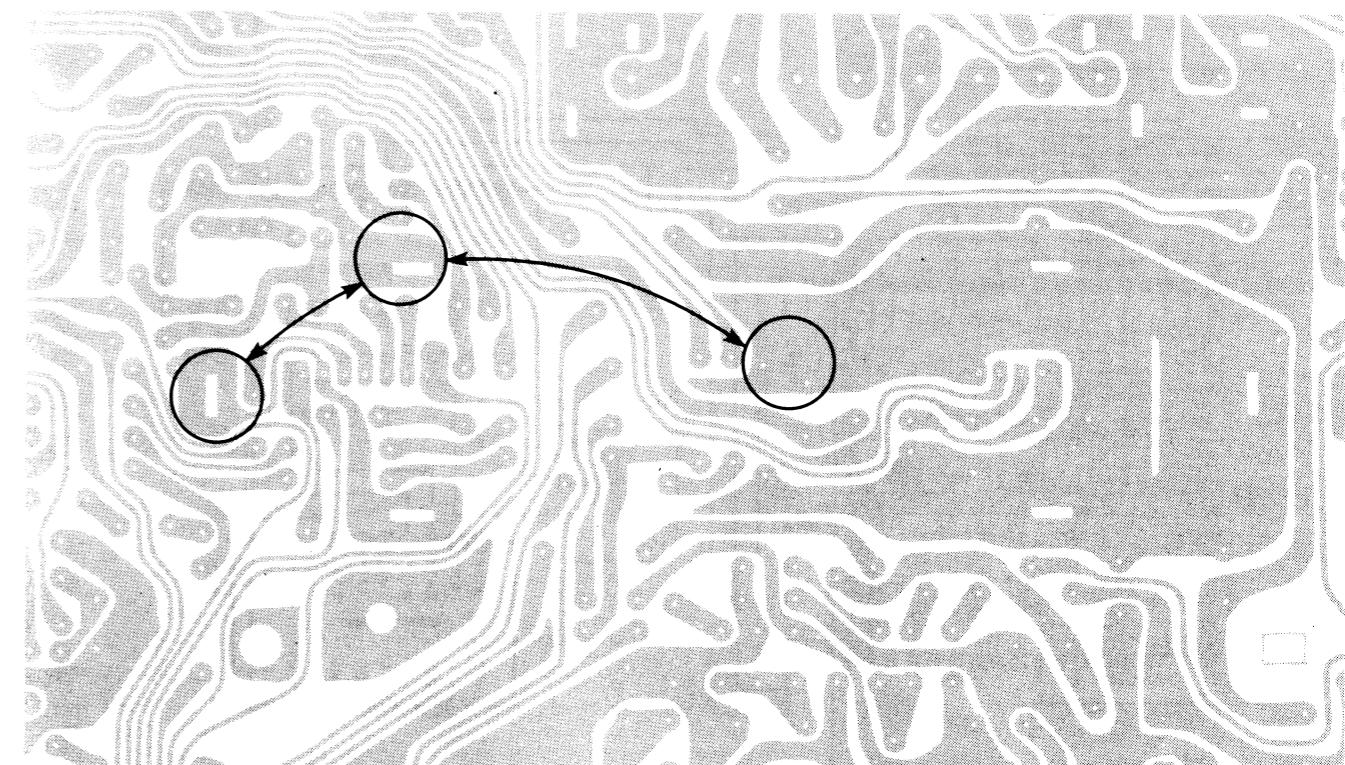

Test Point	Adjustment Point	Mode	Input
IC501 Pin 28	L502	---	SECAM Color Bar
Tape	Equipment		Spec
---	SECAM Pattern Generator DC Voltage Meter	See Reference Notes below.	

### Reference Notes:

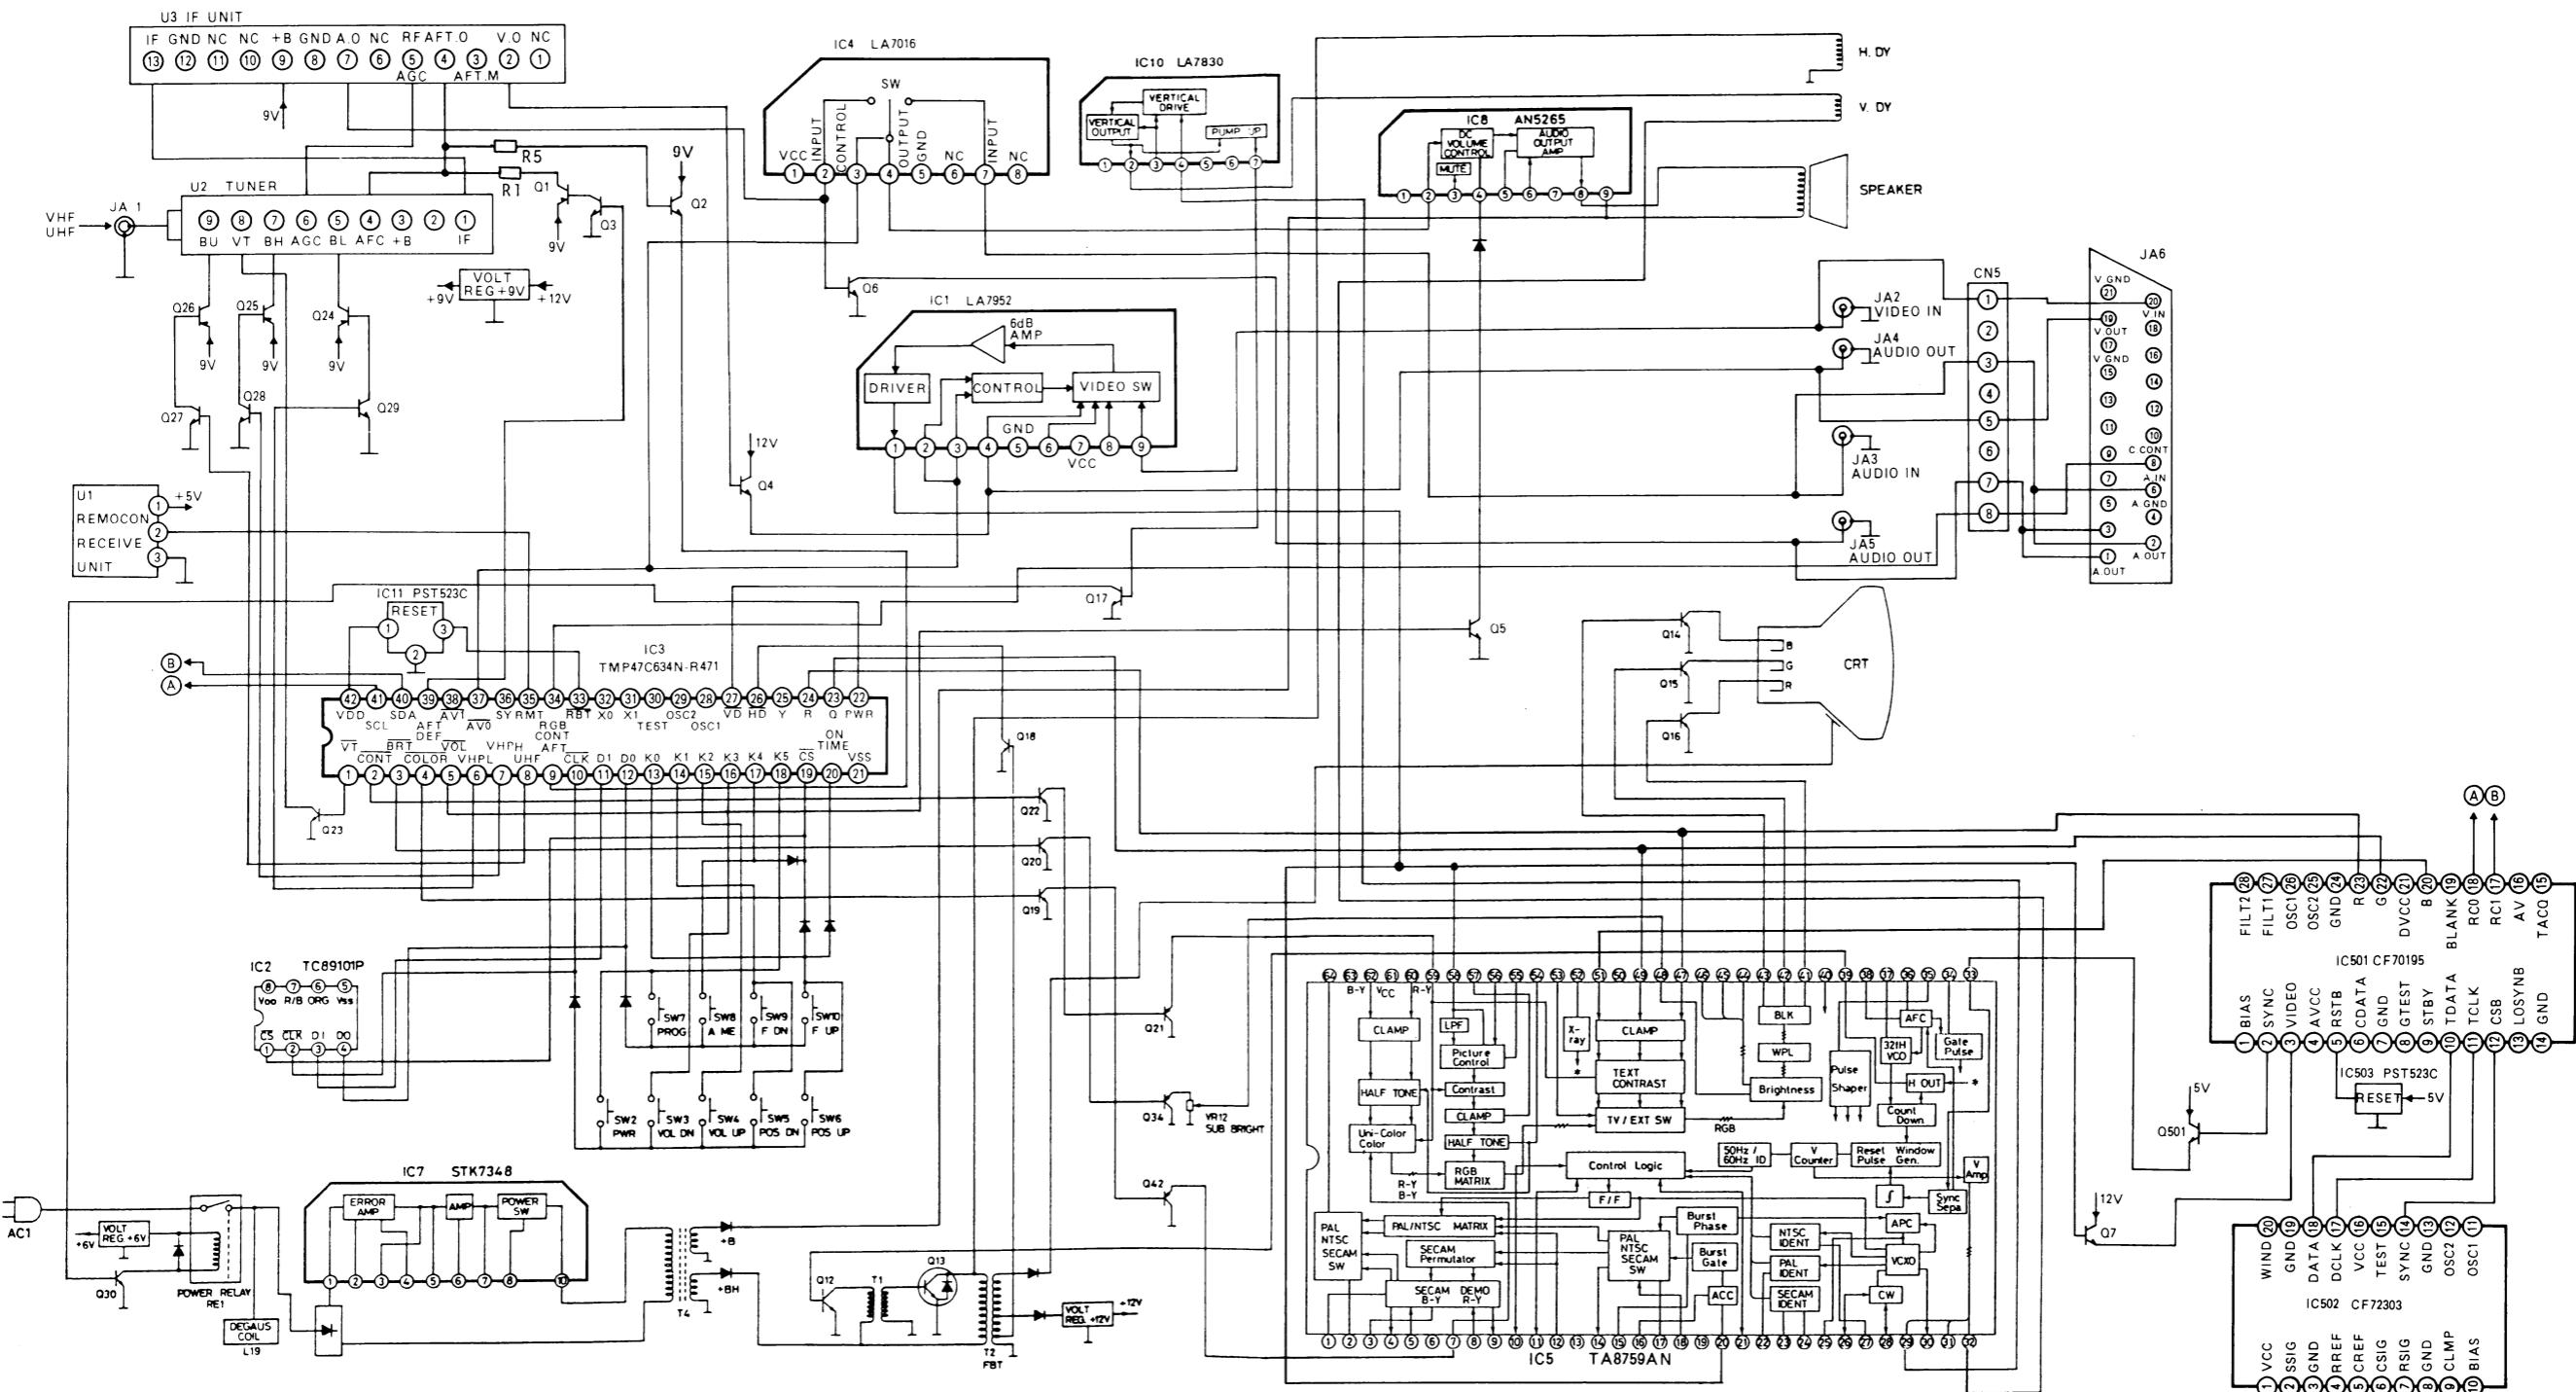

1. Input SECAM Color Bar signal to Video Input or RF (make sure to receive at the best synchronized point).
2. Set to TEXT mode by TEXT / MIX KEY.
3. Adjust L502 so that the DC Voltage IC501 Pin 28 of between and GND becomes DC2.5V.

### caution !

The shield case of TEXT PCB connects the ground copper patterns of Main PCB, after removing the shield cases so, make sure to connect the solder holes of the shield case by wires for properly servicing.
